ACADEMIC REGULATIONS FOR B.TECH. DEGREE COURSE

(Applicable for Students admitted from the academic year 2013-2014)

1. Courses of study

The following courses of study are offered at present for specialization for the B. Tech. Course:

Branch Code	Branch
01	Civil Engineering.
02	Electrical and Electronics Engineering
03	Mechanical Engineering
04	Electronics and Communication Engineering
05	Computer Science and Engineering.
10	Electronics and Instrumentation Engineering
12	Information Technology
24	Automobile Engineering

1.1 Eligibility Criteria for Admission

- The eligibility criteria for admission into engineering programmes shall be as mentioned below:
- The candidate shall be an Indian National / NRI
- The candidate should have completed 16 years of age as on 31st December of the academic year for which the admissions are being conducted.
- The Candidate should have passed the qualifying examination (10+2) or equivalent as on the date of admission

1.1 .1 Seats in each programme in the Institution are classified into **Category A** and **Category B** as per the G.Os.

a) Category – A Seats

These seats will be filled through counseling as per the rank at the Common Entrance Test (EAMCET) conducted by the State Government and as per other admission criteria laid down in the G.Os.

1.1.2 **Category - B Seats**

These seats will be filled by the institute as per the G.Os Issued by State Government from time to time.

1.1.3 **Category: Lateral Entry**

The candidate shall be admitted into the Third Semester, (2nd year, 1st Semester) based on the rank secured by the candidate at Engineering Common Entrance Test (ECET (FDH)) by the Convener, ECET.

2. Distribution and Weightage of Marks

- i. The performance of a student in each Semester shall be evaluated subject – wise with **a maximum of 100 marks for theory and 100 marks for practical subjects**. In addition, an Industry oriented mini-project, Seminar, Comprehensive viva-voce, and Project Work shall be evaluated for **100, 100, 100 and 200 marks** respectively.
- ii. For theory subjects the distribution shall be **30 marks for Mid Semester Evaluation and 70 marks for the End Semester Examination**.

For theory subjects, two mid examinations will be conducted in each Semester as per the academic calendar. Each mid examination is evaluated for 25 marks.

For the Mid-Examination the Distribution of Marks (25 Marks) as follows

Part-A: - 4 Marks (4X1 Marks) Compulsory

6 Marks (3X2 Marks) Compulsory

Part-B:- 15 Marks (3X5 Marks) 3 out of 4 Questions

Assignment Test/Assignment: - Two assignments are to be given to students covering the syllabus of First Mid and Second Mid Examinations respectively and are evaluated for 5 marks each.

The first assignment shall be submitted after first mid examinations and second Assignment should be submitted after second mid examination.

At the end of the Semester, Internal Marks (Maximum 30) for the respective subject is assigned as follows:

- (a) 25 marks: 80% from the best performed mid examination and 20% from the other mid examination.
- (b) 5 marks: Average of the two assignments/assignment tests

- iii. For practical subjects there shall be a continuous evaluation during the Semester for **30 marks and 70 marks for end examination**. Out of the 30 marks, **day-to-day work in the laboratory shall be evaluated for 10 marks**, and 10 marks for practical examination and 10 marks for laboratory record.

NOTE: A. Student who is absent for any assignment/Mid-term examination for any reason what so ever shall be deemed to have secured 'zero' marks in the test/examination and no makeup test/examination shall be conducted.

B. If any student absent for mid exam due to Medical/Acute illness same may be reported in advance to Head of the Department in writing with a request to reconduct the mid-term examination. The committee consisting of HOD/Dean-Academics/Dean-Examinations will take the final decision on the conduct of mid-term examination.

- iv For the subjects having design and / or drawing, (such as Engineering Graphics, Engineering Drawing, Machine Drawing, Production Drawing Practice, and Estimation etc.,) the distribution shall be **30 marks for internal evaluation (15 marks for day-to-day work and 15 marks for Mid examination** (the average of the two examinations will be taken into account) **and 70 marks for end semester examination.**

- V There shall be an **industry-oriented mini-Project**, in collaboration with an industry of their specialization, to be taken up during the summer vacation after III year II Semester examination. The **industry oriented mini project shall be evaluated during the IV year I Semester**. The industry oriented mini project shall be submitted in report form and should be presented before a committee, which shall be evaluated for **100 marks**. The committee consists of Head of the Department, the supervisor of mini project and a senior faculty member of the department. There shall be **no mid-term assessment for industry oriented mini project. However, attending the shadow engineering program is a pre – requisite for evaluating industry – oriented mini project**. Students should submit a report on learning outcomes of the shadow engineering and Engineer in Mirror. Every student should attend shadow engineering and Engineer in Mirror programme in an industry for not more than a week days during second year and third year respectively.

- vi. There shall be a **Seminar presentation in IV year II Semester**. For the Seminar, the student shall collect the information on a specialized topic other than the project topic and prepare a technical report, showing his understanding of the topic, and submit to the department, which shall be

evaluated by a Departmental committee consisting of the Head of the department, Seminar supervisor and a senior faculty member. **The seminar will be evaluated for 100 marks based on the report and presentation made.**

- vii. There shall be a **Comprehensive Viva-Voce in IV year II Semester**. The Comprehensive Viva-Voce will be conducted by a Committee consisting of the Head of the Department and three Senior Faculty members of the Department **after submitting M.T.P record in complete**. The Comprehensive Viva-Voce is aimed to assess the student's understanding in various subjects studied during the B.Tech course of study. The Comprehensive Viva-Voce is evaluated **for 100 marks** by the Committee. There will be **no Midterm assessment for the Comprehensive viva-voce**.
- viii. The Project work shall be started by the student in the beginning of the IV year I Semester. Out of a total of **200 marks** for the project work, **60 marks shall be for Midterm Evaluation** and **140 marks for the Semester end Examination**. The viva-voce shall be conducted by a committee comprising of an external examiner, Head of the Department and the project supervisor and one senior faculty. The evaluation of project work shall be conducted at the end of the IV year II Semester. **The Midterm Evaluation shall be on the basis of three Seminars conducted during the IV year II Semester for 30 marks by the committee consisting of Head of the Department, project supervisor and senior faculty member of the Department and for 30 marks by the supervisor of the project.**

3. Semester end Examination

(a) Theory Courses

Each course is evaluated for 70 marks. Examination is of 3 hours duration. Question Paper Pattern is as follows

Part A:- 30 Marks Compulsory

5X1Marks (One question from each unit)

5X2Marks (One question from each unit)

5X3Marks (One question from each unit)

Part B:- 40 Marks (4 out of 6 questions) (At least one question from each unit)

(b) Practical Courses

Each lab course is evaluated for 70 marks. The examination shall be conducted by the laboratory teacher and another senior teacher concerned with the subject of the same/other department/Industry. One of examiner will be appointed by the Controller of Examinations in consultation with HOD as and when required and is evaluated as per standard format.

(c) Supplementary Examinations

Supplementary Examinations will be conducted for the current semester after the declaration of the results of the regular examination of that semester.

4. Attendance Requirements

- i. A student shall be eligible to appear for the Semester end examinations if he / she acquire a **minimum of 75% of attendance in aggregate of all the subjects** for Semester.
- ii. Condonation of shortage of attendance in aggregate **up to 10% (65% and above and below 75%)** in a semester may be granted by **Institute Academic Committee**.
- iii. A student will not be permitted to write the end examination and not promoted to the next Semester unless he satisfies the attendance requirement of the present Semester, as applicable. He may seek re-admission for that Semester when offered next.
- iv. Shortage of Attendance **below 65% in aggregate** shall in **NO case be condoned**.
- v. Students whose shortage of attendance is not condoned / not paid the stipulated fee in any Semester are not eligible to take their end semester examination of that Semester.

5. Minimum Academic Requirements

The following academic requirements have to be satisfied in addition to the attendance requirements mentioned in item No.4.

- i. A student shall be deemed to have satisfied the minimum academic requirements and earned the credits allotted to each theory or practical design or drawing subject or project, if he secures **not less than 35% (25 out of 70 marks) of marks in the end examination and a minimum of 40% of marks in the sum total of the Midterm evaluation and end semester examination taken together**.
- ii. A student shall be **promoted from II to III year** only if he fulfills the academic requirement of getting **50 credits from the examinations held upto II Year II Semester including Supplementary examinations of II B.Tech II Semester**.
- iii. A student shall be **promoted from III year to IV year** only if he fulfills the academic requirement of getting a total of **75 credits from the examinations held upto III Year II Semester including Supplementary examinations of III B.Tech II Semester** .
- iv. A student shall register and put up minimum academic requirement in all 200 credits and earn atleast 192 credits. Marks obtained in these credits shall be

considered for the calculation of Cumulative Grade Point Average (**CGPA**) and percentage of marks.

- v. The student should obtain two certificate courses during his/her course of study
- vi. Students who fail to earn atleast 192 credits as indicated in the course structure **within eight academic years** from the year of their admission shall **forfeit their seat** in B.Tech. Course and their **admission stand Cancelled**.

6. Course pattern

- i. The entire course of study is of four academic years. **All I, II, III and IV years are of Semester pattern.**
- ii. A student eligible to appear for the end semester examination in a subject, but absent or has failed in the end semester examination may reappear for that subject at the supplementary examination whenever conducted.
- iii. When a student is detained due to shortage of attendance in any Semester, he may be re-admitted into that Semester when it is offered next, **with the academic regulations of the batch into which he gets readmitted.**
- iv. When a student is detained due to lack of credits in any year, he may be eligible for promotion to the next year after obtaining required number of credits and fulfillment of the academic requirements.

Award of B.Tech. Degree and Class

A student will be declared eligible for the award of the B. Tech. Degree if he/she fulfils the following academic regulations:

- i) Pursued **a course of study for not less than four academic years and not more than eight academic years.**
- ii) Registered for **200 credits** and secured a minimum of **192 credits with compulsory subjects as listed in Table.**

Table: Compulsory Subjects

Serial Number	Subject Particulars
1.	All Practical Subjects
2.	Industry oriented mini project
3.	Comprehensive Viva-Voce
4.	Seminar
5.	Project work

- iii) The student should obtain two certificate courses during his/her course of study

NOTE: Students, who fail to fulfill all the academic requirements for the award of the degree within eight academic years from the year of their admission, shall forfeit their seat in B.Tech. Course.

7. **CGPA System:**

Method of awarding absolute grades and grade points:

The **absolute grading method** is followed, based on the total marks obtained in internal and external examinations. Grades and grade points are assigned as per the Table given below

B.Tech Program: The Absolute Grading Method is followed, based on the total marks obtained in internal and external examinations. Grades and Grade points are assigned as given below

Marks Obtained	Grade	Description of Grade	Grade Points(GP) Value Per Credit
>=90	O	Outstanding	10.00
>=80 and <89.99	A+	Excellent	9.00
>=70 and <79.99	A	Very Good	8.00
>=60 and <69.99	B	Good	7.00
>=50 and <59.99	C	Fair	6.00
>=40 and <49.99	D	Pass	5.00
<40	F	Remedial	
Not Appeared the Exam(s)	N	Absent	

The student is eligible for the award of the B.Tech degree with the class as mentioned in the Table.

CGPA	CLASS
>= 7.5	First Class with Distinction
>= 6.5 and <7.5	First class
>= 5.5 and < 6.5	Second Class
>=5.0 and < 5.5	Pass class

Calculation of Semester Grade Points Average (SGPA):

The performance of each student at the end of the each semester is indicated in terms of SGPA. The SGPA is calculated as below:

$$SGPA = \frac{\text{Total Earned Weighted Grade Points for that Semester}}{\text{Total Credits for the Semester}}$$

$$SGPA = \frac{\sum_{i=1}^P C_i * G_i}{\sum_{i=1}^P C_i}$$

Where 'Ci' = Number of Credits allotted to particular subject 'i'

'Gi' = Grade Point corresponding to the letter grade awarded in that subject 'i'

'i' = 1,2,.....P represent the number of subjects for that particular semester

*** SGPA is calculated and awarded for the candidates who pass all the courses in a semester.**

Calculation of Cumulative Grade Point Average (CGPA) for Entire Programme.

The CGPA is calculated as below:

Assessment of the overall performance of a student is obtained by calculating Cumulative Grade Point Average (CGPA), which is weighted average of the grade points obtained in all subjects during the course of study.

$$CGPA = \frac{\sum_{i=1}^m C_i * G_i}{\sum_{i=1}^m C_i}$$

Where Ci= Number of credits allotted to a particular subject 'i'

Gi = Grade Point corresponding to the letter grade awarded in that subject 'i'

i = 1,2,....m represent the number of subjects of the entire program.

Grade lower than D in any subject is not considered for CGPA calculation. The CGPA is awarded only when the student acquires the required number of credits prescribed for the program.

Grade Card

The grade card issued shall contain the following:

- a) The credits for each subject offered in that semester
- b) The letter grade and grade point awarded in each subject
- c) The **SGPA/CGPA**
- d) Total number of credits earned by the student up to the end of that semester.
- e) Award list indicating the marks awarded to the student.

8. Withholding of Results

If the student has not paid dues to College, or if any case of indiscipline is pending against him, the result of the candidate may be withheld. The award or issue of the Degree may also be withheld in such cases.

9. Transitory Regulations

Students who have discontinued or have been detained for want of attendance or any other academic requirements, may be considered for readmission as and when they become eligible. They have to take up Equivalent subjects, as substitute subject in place of repetition of subjects as decided by the BoS chairman of the respective department. He/She will be admitted under the regulation of the batch in which he/she is readmitted.

10. Minimum Instruction Days

The minimum instruction days for each Semester shall be **90 instruction days**.

11. There shall be **no branch transfers** after the completion of admission process.

12. The decision of the Institute Academic Committee will be final in respect of equivalent subjects for those students who are transferred from other colleges. The transfer of students from other college or from this institute is to approved by the Governing Council.

13. General

- i. Where the words “he”, “him”, “his”, occur in the regulations, they include “she”, “her”, “hers”.
- ii. The academic regulations should be read as a whole for the purpose of any interpretation.
- iii. In the case of any discrepancy/ambiguity/doubt arises in the above rules and regulations, the decision of the Principal shall be final.
- iv. The Chairmen Academic Council may change or amend any or all of the academic regulations or syllabi at any time and the changes or amendments made shall be applicable to all the students concerned with effect from the dates notified by the College.

14. Academic Regulations for B.Tech. (Lateral Entry Scheme)

(Applicable for students admitted from the academic year 2013-2014)

- (i) Registered for 150 credits and secured a minimum of 142 credits with compulsory subjects as listed in table.

Table: Compulsory Subjects

Serial Number	Subject Particulars
1.	All Practical Subjects
2.	Industry oriented mini project
3.	Comprehensive Viva-Voce
4.	Seminar
5.	Project work

- (ii) A student who fails to earn a minimum of 142 credits as indicated in the course structure within **six** academic years from the year of their admission shall forfeit their seat in B.Tech. programme and their admission stands cancelled.
- (iii) The same attendance regulations are adopted as that of B.Tech. Four year degree course.
- (iv) A student shall be promoted from Third year to Fourth year only on fulfilling the academic requirements of securing 50 credits from the examinations held upto III B.Tech II Semester including Supplementary Examinations.

- (v) All other regulations as applicable to B.Tech. four year degree course will hold good for B.Tech. (Lateral Entry Scheme).

15. Malpractice Rules

Disciplinary Action for Malpractices/Improper Conduct in Examinations

	Nature of Malpractices/Improper conduct	Punishment
	If the candidate:	
1.	(a) Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination)	Expulsion from the examination hall and cancellation of the performance in that subject only.
	(b) Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that Semester/year. The Hall Ticket of the candidate is to be cancelled.

3.	Impersonates any other candidate in connection with the examination.	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all end semester examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all end semester examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners	Cancellation of the performance in that subject.

	or writes to the examiner requesting him to award pass marks.	
6.	Refuses to obey the orders of the Chief Superintendent/Assistant – Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that subject and all other subjects the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The candidates are also debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them.
7.	Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters

		from class work and all end semester examinations including supplementary Examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
8.	Possess any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat.
9.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	If the student belongs to the college, expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.
10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.
11.	Copying detected on the basis of internal evidence, such as, during	Cancellation of the performance in that subject and all other subjects the

	valuation or during special scrutiny.	candidate has appeared including practical examinations and project work of that semester/year.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the academic council of the Institute for further action to award suitable punishment.	

Malpractices identified by squad or special invigilators

Punishments to the candidates as per the above guidelines.

Malpractice identified at Spot center during valuation

The following procedure is to be followed in the case of malpractice cases detected during valuation, scrutiny etc. at spot center.

- 1) Malpractice is detected at the spot valuation. The case is to be referred to the malpractice committee. Malpractice committee will meet and discuss/question the candidate and based on the evidences, the committee will recommend suitable action on the candidate.
- 2) A notice is to be served to the candidate(s) involved through the Principal to his address and to the candidate(s) permanent address regarding the malpractice and seek explanations.
- 3) The involvement of staff who are in charge of conducting examinations, invigilators valuing examination papers and preparing / keeping records of documents relating to the examinations in such acts (inclusive of providing in correct or misleading information) that infringe upon the course of natural justice to one and all concerned at the examinations shall be viewed seriously and recommended for award of appropriate punishment after thorough enquire.
- 4) Based on the explanation and recommendation of the committee action may be initiated.

5) Malpractice committee:

- | | |
|--|----------|
| i. Principal | Chairman |
| ii. Controller of Examinations | Convener |
| iii. Invigilator | Member |
| iv. Chief Examiner of the subject/subject expert | Member |
| v. Concerned Heads of the Department | Member |

Programme Educational Objectives (PEOs):

- I.** To provide students with a solid foundation in the scientific, mathematical, and Engineering fundamentals necessary to formulate, analyze, solve engineering problems.
- II.** To prepare students to meet the challenges in IT Industry regarding Analysis, Design and Development of various types of Projects that meet the needs of National and Global Companies, and also to prepare them for pursuing higher studies and research.
- III.** To develop the understanding for specification, planning, designing, implementation and deployment of software project by providing the sufficient knowledge of Software Engineering, Unified Modeling, Cyber Security and Information Retrieval Systems.
- IV.** Ability to enhance the analytical skills of the students with the faculty expertise by bringing the real world into labs through a specially designed VNR protocol and Learning by doing. And also enlarging the technological horizon of students beyond curriculum through Seminars, Workshops, Shadow Engineering and Mirror Engineering.
- V.** To organize special training programmes on modern IT skills to pursue certification courses through Oracle, Java and Computer Network Certification.
- VI.** To train students with broader scientific and engineering knowledge by providing multidisciplinary courses with emphasis on Digital, Microprocessor and embedded systems, so as to achieve ability to comprehend, analyze, design and create novel products with innovative ideas.
- VII.** To develop effective communication skills, managerial skills, team spirit, multi disciplinary approach with social commitment and optimal utilization of resources as an IT professional.
- VIII.** Ability to convert innovative ideas in to high end projects and to convert it into a marketable product in collaboration with industry by providing with the sufficient knowledge of Cloud Computing, Virtualization, and Web 2.0.
- IX.** IT Professional endeavors enable the graduate to meet the legal and ethical responsibilities and to engage in life-long learning, to advance the economic and social development at the National and global levels through technology transfer.

Program Outcomes:

The program demonstrates that the graduate is

- a) Graduates will have an understanding of the fundamental mathematical, logical, statistical, and scientific principles, emphasizing computing and information processing.
- b) An ability to identify and analyze the user needs and take them in to account for Selection, Creation, Evaluation and Administration of Computer-based systems like –Institute Management, Cart and Inventory Management.
- c) The core competence in the field of IT addresses a wide range of strategic, managerial and operational activities involved in gathering, processing, storing, distributing and use of information, and its associated technologies like SE, OS, WT, DBMS, CN and Security in developing applications for various organizations.
- d) Graduate will demonstrate an ability to visualize and work on laboratory to understand the performance of different types of projects.
- e) Through VNR protocols, students are able to acquire in depth knowledge and can apply this mode of inquiry in an application development like search engine.
- f) Ability to acquire and apply fundamental principles of Basic Electrical Engineering, microprocessor, microcontrollers and embedded Systems.
- g) Ability to understand software engineering and Testing principles and apply them to design, develop, implement and deploy with extensive security features.
- h) Students to engage actively in research, consulting, and/or other professional activities, both to advance individual professional competence and to integrate new knowledge into the educational programs like Oracle Workforce Development plan.
- i) Develop a sense of personal responsibility and accountability for one's individual actions and performance. Apply personal goal setting, decision making skills, and time management concepts.
- j) Work effectively in teams with people of diverse backgrounds at all corporate levels.
- k) Graduates able to develop "win-win" approaches for conflict resolution and assess feasibility, Risk of the projects.
- l) Students can apply information technology principles and practices to a variety of problems, with the understanding of social, professional, and ethical issues related to Computing, Networking and Security.
- m) Ability to update his knowledge with the latest technologies by getting involved in projects on distinct domains like cloud security.
- n) Recognize the need for continued learning by participating and succeeding in competitive examinations like GATE, GRE, CAT and also pursue research.

(13MTH001) ADVANCED CALCULUS

Course prerequisites: Differentiation, integration

Course Objectives:

1. Understand the Taylor's theorem and its application to maxima and minima of $f(x,y)$
2. Understand the process of curve sketching
3. Understand the multiple integrals and its applications
4. Apply the integral theorems of vector calculus.

Course Outcomes:

Students will be able to

1. Solve problems involving the maxima and minima of $f(x,y)$.
2. Apply the curve tracing concepts to find arc length of curves, surface area, volume of solids of revolution.
3. Evaluate the multiple integrals using appropriate change of variables.
4. Verify the integral theorems.

UNIT I CALCULUS OF ONE AND SEVERAL REAL VARIABLES

Mean value theorems – Rolle's Theorem, Lagrange's Mean value theorem Cauchy's Mean value theorem, Taylor's expansion and McLaurin's expansion of functions (without proofs).

Partial differentiation, partial derivatives of first and second order in terms of partial derivatives, Jacobian, Euler's theorem on homogeneous functions, change of variables, Taylor's theorem of two variables (without proof) and its application. Maxima and Minima of two variables, Lagrange's method of undetermined multipliers.

UNIT II CURVE TRACING AND RELATED APPLICATIONS

Curvature of curves in Cartesian, parametric and polar coordinates. Tracing of curves in Cartesian, parametric and polar coordinates (like conics, astroid, hypocycloid, Folium of Descartes, Cycloid, Circle, Cardioid, Lemniscate). Applications -finding area under the curves, Length of the curves, volume and surface area of solids of revolution

UNIT III MULTIPLE INTEGRALS

Introduction of Multiple integrals, evaluation of double and triple integrals, change of order of integration change of variables, Cylindrical and Spherical polar coordinates. Application to evaluation of plane areas, volumes and surface areas of solids of revolution.

UNIT IV VECTOR DIFFERENTIAL CALCULUS

Scalar and Vector point functions, Gradient, Divergence, Curl with geometrical & physical interpretation, Directional derivatives, Properties.

UNIT V VECTOR INTEGRAL CALCULUS

Line integrals and application to Work done and Circulation, Scalar potential function, Surface integrals and Volume integrals, Gauss divergence theorem, Green's theorem, Stokes' theorem (theorems without proof).

TEXT BOOKS:

1. Higher Engineering Mathematics – by B. S. Grewal, Khanna publishers
2. Calculus and Analytic Geometry by Thomas and Finney, 9th edition; Publisher: Pearson Education.

(13PHY001)ENGINEERING PHYSICS

Course Objectives:

1. To supplement and enhance the basic concepts in Physics essentially required in the study of materials as well as interaction of light with matter, interaction of light with matter through physical phenomena like interference, diffraction and polarization.
2. To know and understand some important applications of lasers and optical fibers.
3. To learn the importance of wave and particle nature of light and to understand the behavior of an electron in one dimensional potential box.
4. To understand the effect of temperature on Fermi Dirac Distribution Function and also learn the behavior of an electron in a periodic potential, the new concept of Effective mass of an electron and to know the classification of materials into conductors, semiconductors and insulators.

Course Outcomes:

After completion of the course, the students will be able to:

1. Understand the Phenomenon of Interference, Diffraction & Polarization.
2. Learn the principle, working, construction and energy mechanism of various lasers and their applications Explain the light signal propagation and attenuation through optical fiber.
3. Understand the differences between particle and wave nature, energy states in one dimensional potential box and also the Consequences of Heisenberg's Uncertainty principle.
4. Understand the one dimensional Schrodinger's wave equation and the effect of temperature on Fermi-Dirac Distribution, Kronig Penny model.

UNIT-I: INTERFERENCE:

Superposition principle, resultant amplitude, coherence, methods to obtain coherent sources, interference, Young's double slit experiment, interference in thin films by reflection, Newton's rings Experiment

DIFFRACTION-I:

Distinguish between Fraunhofer and Fresnel diffraction, diffraction at single slit (Qualitative and Quantitative (Phasors approach)).

UNIT-II: DIFFRACTION-II

Diffraction at double slit, circular aperture, and multiple slits (grating)(Qualitative Approach), Resolution of spectral lines, Rayleigh criterion, and resolving power of grating.

POLARIZATION

Polarization phenomenon, Brewster's Law and Malus law, examples, types of polarization, double refraction, Nicol prism, Quarter and Half wave plates

UNIT-III: LASERS:

Characteristics of Lasers – Spontaneous and Stimulated Emission of radiation, meta stable state, population inversion, lasing action, Einstein's coefficients and relation between them — Ruby Laser – Helium-Neon Laser –Semiconductor Laser – Applications of lasers.

FIBER OPTICS:

Principle of optical fiber and properties – Acceptance angle and acceptance cone – Numerical aperture –Types of fibers and refractive index profiles – Qualitative analysis of attenuation in optical fibers –Application of optical fibers.

UNIT-IV: ELEMENTS OF STATISTICAL MECHANICS:

Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics (non-mathematical treatment); Photon gas, Planck's law of black body radiation; Deduction of Wien's law and Rayleigh-Jeans law from Plank's law.

PRINCIPLES OF QUANTUM MECHANICS:

Waves and particles – De Broglie hypothesis - Matter waves - Davisson and Germer experiment –Heisenberg's uncertainty principle - Schrodinger Wave Equation – Wave function and its Physical Significance - Particle in one dimensional potential box(wave functions, probability densities and energy states).

UNIT-V: FREE ELECTRON FERMI GAS:

Energy levels in one dimension, Effect of temperature on the Fermi-Dirac distribution, Free electron gas in three dimensions, electrical conductivity & Ohm's law, Electrical Resistivity of Metals (Qualitative).

BAND THEORY OF SOLIDS:

Electron in a periodic potential; Bloch Theorem; Kronig-Penney model (non-mathematical treatment); Origin of energy band formation in solids; Classification of materials into conductors, semiconductors & Insulators; and Concept of effective mass of an electron.

TEXT BOOKS:

1. Physics vol.2, by Halliday, Resnick and Krane; John Wiley & Sons
2. Concepts of Modern physics by Arthur Beiser, McGraw Hill Inc.
3. Introduction to Solid State Physics by Charles Kittel : John Wiley & Sons

(13CHE001) ENGINEERING CHEMISTRY

Course Prerequisites: General Chemistry

Course Objectives:

1. Understand electrochemistry which deals with the utilization of electrical energy of an external source for bringing about a physical or chemical change.
2. Knowledge of “Corrosion engineering education” and Usage of polymers in modern world as an integral part of every human’s life.
3. Knowledge of purification techniques and various applications of soft water in industries.
4. Usage of nanomaterials as emerging scientific components with amazing potential applications in various fields.

Course Outcomes:

1. Visualize the chemical applications of electricity.
2. Prevention of corrosion of metals and applications of polymers from domestic articles to sophisticated scientific and medical instruments.
3. Benefits of treated water as source in steam generation and other fields like production of steel, paper, textiles, atomic energy etc.
4. The applicability and greater efficiency of using a material at nanoscale in different engineering fields.

UNIT I

Electrochemical cells and batteries

Conductance-factors effecting conductance, conductometric titrations; cells: types of cells, cell representation, electrode potential; Standard electrode potential; Electrochemical series; Nernst equation; Reference electrodes – hydrogen, calomel electrode; Ion selective electrodes (glass electrode & fluoride electrode); Numerical problems.

Batteries

Primary and secondary cells (lead-acid cell; Ni-Cd cell; lithium cells); Applications of batteries; Fuel cells – methanol – oxygen fuel cells, advantages of fuel cells; Solar cells - principle, and applications.

UNIT II

Corrosion and its control

Introduction; Causes and effects of corrosion; Different types of corrosion; Theories of corrosion – chemical, electrochemical corrosion (reactions); Factors affecting corrosion

– nature of metal (galvanic series; over voltage; purity of metal; nature of oxide film; nature of corrosion product), and nature of environment (effect of temperature; effect of pH; humidity; effect of oxidant).

Corrosion control methods – cathodic protection, sacrificial anode, and impressed current cathode;

Surface coatings – methods of application on metals (hot dipping; galvanizing; tinning; cladding; electroplating), and organic surface coatings (paints - constituents and functions).

UNIT III

III a) Polymers

Introduction; Types of polymerization; Plastics - thermoplastic resins, and thermoset resins; Compounding & fabrication of plastics; Preparation, properties, and engineering applications of polyethylene, PVC, PS, Teflon, bakelite, nylon.

III b) Rubber

Natural rubber- processing, vulcanization; Elastomers (Buna-s; Butyl rubber; Thiokol rubbers); Fiber reinforced plastics (FRP) and their applications.

UNIT IV

Water

Introduction; Hardness - causes, expression of hardness, units, types of hardness, estimation of temporary & permanent hardness of water, and numerical problems; Boiler troubles – scale & sludge formation, caustic embrittlement, corrosion, priming & foaming; Softening of water (Internal & external treatment - lime soda, zeolite, ion exchange process, and numerical problems); Reverse osmosis and Electro dialysis (desalination processes).

UNIT V

Nanomaterials

Introduction; Preparation and applications of nanomaterials with special reference to carbon nanotubes.

Insulators Classification of insulators; characteristics of thermal & electrical insulators and their applications; Superconductors - $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$; Applications of superconductors.

TEXT BOOKS:

(13ENG001) ENGLISH

Introduction

This is the age of information and communication technologies. Engineers and technical professionals need to convey technical information in English for various purposes.

Besides learning General English as an international language, engineering students need to be equipped with adequate writing ability so that they can communicate technical information clearly on at least a basic level. A good English writing proficiency can be a contributing factor to professional recognition and career prospects. This course teaches those writing strategies that scientists, engineers, and others will need in order to write successfully on the job. It initiates the students into Technical Writing. The purposes of technical writing are to inform and persuade. This program aims to train students in writing clear, concise and effective English.

This Syllabus is therefore, a Pragmatic English Writing Program for engineering students with intermediate proficiency. The program covers a syllabus outline and instructional approaches on basic writing skills with particular reference to technical writing.

Course Objectives:

1. To equip the students with all the LSRW skills for advanced writing and speaking.
2. To equip the students with basic grammar, infrastructural patterns and grammatical constructions required of in technical writing.
3. To acquaint the students with the writing process, beginning with paragraph writing.

This would prepare them for academic and workplace writing.

Course Outcomes:

1. Comprehend technical writing produced in the engineering profession
2. Understand the writing process and create logical paragraphs
3. Use infrastructural patterns in writing and speaking

Methodology

A Task-based, process oriented methodology will be used by the teachers to give a practical orientation to the teaching of language. An inductive approach will be used to demonstrate the use of language in context. This should enable the students to internalize the language structures and vocabulary used in context. Students will be exposed to numerous examples and ample practice will be given in the contextual use of language structures.

Syllabus Outline

Unit I : Review of Grammar

- i) Common Errors
- ii) Subject-Verb Agreement
- iii) Adverbs
- iv) Transitional elements
- v) Use of Articles and Prepositions
- vi) Conjunctions
- vii) pronoun reference

Unit II : Prose 1

- 1. Heaven's Gate by Pico Iyer
- 2. The Connoisseur by Nergis Dalal

Unit III Reading and Writing Skills

- i) Reading Comprehension -- Skimming & Scanning
- ii) Reading Comprehension -- Intensive Reading
- iii) Reading Comprehension -- Critical Analysis
- iv) Paragraph Writing
- v) Letter Writing
- vi) Memo Writing

Unit IV : Prose 2

- 1. The Cuddalore Experience by Anu George
- 2. The Odds Against Us by Satyajit Ray

Unit V : Advanced Writing Skills

- 1. Comparison and Contrast Pattern
- 2. Cause and Effect Pattern
- 3. Classification
- 4. Analogy
- 5. Problem-Solution Pattern

TEXT BOOKS:

- 1. **Enjoying Every day English** by A. Ramakrishna Rao
- 2. **Effective Technical Communication** by Ashraf Rizvi
- 3. **Technical Writing Process and Product** by Gerson Sharon J. and Steven Gerson. 3rd edition, New Jersey: Prentice Hall 1999

REFERENCE BOOKS:

- 1. M. Raman and S. Sharma, 2004; Technical Communication : Principles and Practices, OUP, (Indian Edition)
- 2. Blanton, L.L. 1993; Composition Practice, Book 4 ,Second Edition, Heinle & Heinle Publishers, pp. 54
- 3. Georges, T.M. 1996; A course in Analytical Writing for Science and Technology,

(13CSE001) COMPUTER PROGRAMMING

Course Objectives:

After working through this course the student should be able to:

1. Learn how to write modular, efficient and readable C programs
2. Declare and manipulate single and multi-dimensional arrays of the C data types.
3. Describe the techniques for creating program modules in C using functions and recursive functions.
4. Create and manage derived data types and perform operations on files.
5. Utilize pointers and dynamic memory allocation functions to efficiently solve problems.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. write, compile and debug programs in C language.
2. design programs involving decision structures, loops ,arrays and functions.
3. explain the difference between call by value and call by reference
4. understand the dynamics of memory by the use of pointers.
5. use different file operations to create/update basic data files.

UNIT - I

Computer fundamentals-Hardware, software, computer language , translators, Program Development steps-Algorithms, Pseudo code, flow charts, basic Linux commands ,Introduction to C Language – History, Simple C Program, Identifiers, Basic data types, user defined data types, Variables, Constants, type qualifiers, Managing Input / Output, Operators, Expressions, Precedence and Associativity, Expression Evaluation, Type conversions, Simple C Programming examples.

UNIT - II

Selection Statements – if and switch statements, Repetitive statements – while, for, do-while statements, C Programming examples, other statements related to looping – break, continue, go to, C Programming examples.

Arrays– Basic concepts, one-dimensional arrays, two – dimensional arrays, multidimensional arrays, C programming examples.

UNIT - III

Introduction to Structured Programming, Functions- basics, user defined functions, inter function communication, Standard functions, Storage classes-auto, register,

static, extern, scope rules, arrays to functions, recursive functions, example C programs.

Strings – Basic concepts, String Input / Output functions, arrays of strings, string handling functions, strings to functions, C programming examples.

UNIT - IV

Derived types – Structures – Basic concepts, nested structures, arrays of structures, structures and functions, unions, bit fields, C programming examples.

Pointers – Basic concepts, pointers and functions, pointers and strings, pointers and arrays, pointers and structures, self-referential structures , example C programs.

UNIT – V

Preprocessor Directives, Dynamic Memory Allocation.

File I/O – Basic concepts, text files and binary files, file input / output operations, file status functions (error handling), C programming examples, Command-Line Arguments.

TEXT BOOKS:

1. C programming A Problem-Solving Approach by Behrouz A.Forouzan, E.V.Prasad, Richard F.Gilberg C How to Program Paul Deitel and Harvey Deitel , PH.
2. Computer Programming and Data Structures by E Balagurusamy, Tata McGraw Hill.

REFERENCE BOOKS:

1. Let Us C Yashavant kanetkar BPB.
2. The C Programming Language by Brian W. Kernighan, Dennis M. Ritchie.
3. Absolute beginner's guide to C, Greg M. Perry, Edition 2,Publisher: Sams Pub., 1994.

(13CED004) ENVIRONMENTAL STUDIES

Course Objectives:

1. Develop an understanding of the necessity of protection of environment
2. Develop an understanding of Natural resources
3. Develop an understanding of Biodiversity
4. Develop an understanding of Global Environmental problems
5. Develop an understanding of Environmental pollution

Course Outcomes:

On successful completion of this course, it is expected that students should be able to

1. Acquire the knowledge on environment
2. Acquire the knowledge of various Natural Resources
3. Develop skills in understanding of various environmental problems
4. Develop skills to protect the Environment

UNIT-I

Environmental Studies:

Introduction, Definition, scope and importance, Ecosystems: Introduction, types, characteristic features, structure and functions of ecosystems. Bio geo chemical cycle, Classification of Eco system.

UNIT-II

Natural Resources :classification of Resources, Land resources, Land as resource, Common property resources, Land degradation, Soil erosion and desertification, Effects of modern agriculture, fertilizer –pesticide problems, Forest resources, Use and over-exploitation.

Mining and dams – their effects on forest and tribal people, Water resources, Use and over- utilization of surface and groundwater, Floods, droughts, Water logging and salinity, Dams –benefits and costs, Conflicts over Water, Energy resources.

UNIT-III

Bio-diversity and its conservation, Value of bio-diversity -consumptive and productive use, social, ethical, aesthetic and option values, Bio-geographical classification of India – India as a mega diversity habitat, Threats to bio-diversity –Hot-spots, habitat loss, poaching of wild life, loss of species, seeds, etc. Conservation of bio-diversity – Insitu and Ex-situ conservation.

UNIT-IV

Environmental Pollution –Local and Global Issues,Nature of thermal pollution and nuclear hazards, Global warming, Acid rain,Ozone depletion., Environmental case studies.

UNIT-V

Environmental Problems in India,Drinking water, sanitation and public health,Effects of the activities on the quality of environment, Water scarcity and groundwater depletion, Controversies on major dams – resettlement and rehabilitation of people: problems and concerns, Rain water harvesting, cloud seeding and watershed management. Economy and Environment, The economy and environment interaction, Economics of development, preservation and conservation, Sustainability: theory and practices, Limits to growth, Equitable use of resources for sustainable life styles, Environmental Impact Assessment.

Text Books

1. Environmental Science - Y.Anjaneyulu, B S Publications.
2. Environmental studies-Deeksha dave, Cengage learning India Pvt. Ltd.,
3. Environmental sciences and Engineering - P. Venugopal Rao, PHI learning Pvt. Ltd.,
4. Environmental Science and Technology by M. Anji Reddy, B S Publications.

(13MED103) IT & ENGINEERING WORKSHOP

Course Prerequisites:

Course Objectives:

- To study/demonstrate the concepts of computer w.r.t. its hardware, operating system, assembling and disassembling.
- To conduct the experiments related to production engineering technology.
- To demonstrate the usage of power tools, CNC lathe and machine shop for different exercises

Course Outcomes: Students will be able to:

- Identify, assemble, disassemble, install and write commands for a given configuration of a computer.
- To develop components using the techniques of carpentry, tin smithy, forging, etc. listed in trades for exercises.
- To work out the given models in machine shop and CNC lathe.

IT WORKSHOP

1. Computer Hardware: Identification of Peripherals
2. Assembling and disassembling of a PC
3. Simple diagnostic exercises – Related to hardware
4. Installation of Windows Operating System
5. Installation of Linux Operating System
6. Linux Basic Commands
7. Simple diagnostic exercises –Related to Operating System

TEXTBOOKS:

1. IT Essentials PC Hardware and Software Companion Guide Third Edition by Davis Anfinson and Ken Quamme CISC Press, Pearson Education.
2. PC Hardware and A+ Handbook – Kate J. Chase PHI (Microsoft)

ENGINEERING WORKSHOP

TRADES FOR EXERCISES

At least **two** exercises from each trade:

1. Carpentry
2. Tin-Smithy
3. Fitting
4. Welding
5. Electrical Wiring

TRADES FOR DEMONSTRATION and EXPOSURE:

1. Power tools in construction, wood working, electrical engineering and mechanical engineering.
2. Machine shop.
3. CNC Lathe

TEXT BOOKS:

1. Workshop Manual by P.Kannaiah and K.L.Narayana; Publisher: Scitech.

L	T/P/D	C
0	3	2

(13CSE101) COMPUTER PROGRAMMING LABORATORY

Course objectives:

After working through this course the student should be able to:

1. Gain a working knowledge of C programming to write modular, efficient and readable C programs by Identifying the structural elements and layout of C source code.
2. Declare and manipulate single and multi-dimensional arrays of the C data types and derived data types like structures, unions.
3. Use functions from the portable C library and to describe the techniques for creating program modules using functions and recursive functions.
4. Manipulate character strings in C programs.Utilize pointers to efficiently solve problems.Allocate memory to variables dynamically and Perform operations on text and binary files.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. understand the basic terminology used in computer programming and to write, compile and debug programs in C language.
2. design programs involving decision structures, loops ,arrays and functions.
3. understand the dynamics of memory by the use of pointers.
4. use different file operations to create/update basic data files.

TASK 1

- a. Basic Linux commands
- b. Simple C programs -to implement basic arithmetic operations – sum, average, product, smallest, largest of the numbers, difference, quotient and remainder of given numbers etc.

TASK 2

Programs on if, else-if, nested if, else if ladder - largest and smallest of given numbers, to find the grade of a student based on marks, roots of a quadratic equation etc.

TASK 3

- a. Programs on switch-case – to check the type of a given character, to find the grade of a student etc.
- b. Programs on while and do-while- to find factorial, Fibonacci series, GCD, Sin(x), Cos(x) series , to check whether a given number is an Armstrong, Palindrome, Perfect, number conversion, and Prime number etc.

TASK 4

Programs on for loop- sum of n natural numbers, factorial, sin(x), to generate Pascal's triangle etc.

TASK 5

- a. Programs on nested loops – check for Fibonacci prime, Pyramids of numbers, generation of prime numbers in the given range, multiplication table etc.
- b. programs using break, go to, continue.

TASK 6

- a. Programs on 1-D array-finding minimum and maximum element ,Sorting and Searching etc.
- b. Programs on 2-D array – sum, product and multiplication of two Matrices etc.

TASK 7

- a. Programs on Functions-Implementation of user defined functions categories, passing of arrays to functions etc.
- b. Programs on recursion - factorial of a given integer, GCD of two given integers etc.

TASK 8

- a. Programs on String handling functions-copying, reverse, substring, concatenation.
- b. Programs on structure and unions.

Mid Term EXAM

TASK 10

Programs using pointers- pointer basic operations, pointers and functions etc

TASK 11

Programs on pointers and structures, pointers and arrays, pointers and strings.

TASK 12

Programs on files-implementation of file handling functions.

TASK 13

- a. Programs on files error handling.
- b. Programs on Dynamic memory allocation

TASK 14

Programs on command line arguments.

TASK 15

Programs on preprocessor directives

TASK 16

INTERNAL LAB EXAM

VNR VIGNANA JYOTHI INSTITUTE OF ENGINEERING & TECHNOLOGY

I Year B.Tech IT, CSE– I SEM

0	3	2

(13EPC101) ENGINEERING PHYSICS & CHEMISTRY LABORATORY

Course Objectives:

1. To practically learn interaction of light with matter through physical phenomena like interference, diffraction and dispersion.
2. To expose to the principle of superposition and resonance.
3. To demonstrate the formation of standing waves and to understand the mechanical wave behavior and to determine Rigidity Modulus of different materials of wires .
4. To demonstrate basic discharge phenomenon in capacitors and to know the characteristics of the circuit elements, like resistors, capacitors and inductors.

Course Outcomes:

After completion of the course, the students will be able to:

1. Understand clearly the interference principle in wave theory of light and able to relate it to the formation of Newton Rings and Obtain a pure spectrum when light passes through prism
2. Understand the formation and propagation of mechanical waves
3. Study simple oscillations of a load attached to a string and relate it to nature of material of string
4. Understand the physical significance of time constant and related uses

Any Eight Experiments from the following:

1. Dispersive Power of the material of a Prism using Spectrometer
2. Diffraction Grating (both with Laser and non laser source)
3. Single Slit with laser light
4. Newton's Rings
5. Finding thickness of a thin wire or sheet by forming a wedge shaped film
6. Energy gap of a semiconductor material
7. Torsional Pendulum Expt: To determine the rigidity modulus of material of a wire
8. Melde's experiment
9. Sonometer Experiment
10. AC frequency by sonometer method
11. Numerical Aperture and Acceptance angle of an optical fiber cable
12. Bending losses in optical fiber
13. Stewart Gee's experiment

14. Characteristics of LED/Laser Diode.
15. Photo cell/ Solar Cell
16. RC circuit-Time constant

Book: Essential Practical Lab Manual in Physics: by P.Raghavendra Rao

Engineering Chemistry Lab

Course Objectives:

- Estimation of hardness of water is essential for drinking water and in industries to avoid boiler troubles.
- Knowledge of instrumentation in Colorimeter, Redwood viscometer, Conductivity meter and pH meter.
- Knowledge of preparation of soap.

Course Outcomes:

After completion of the course, the students will be able to:

- Understand the extent of hardness range present in a water sample and its consequences if used for various industrial operations.
- Determination of strength of solutions ,pH of various solutions, lubricants usage in machinery to prevent wear and tear.
- Understanding the composition of soap used for washings.

LIST OF EXPERIMENTS

- 1. Titrimetry**
 - a) Estimation of hardness of water by EDTA method.
- 2. Instrumental methods**
 - (i) Conductometry**
 - a) Conductometric titration of strong acid vs. strong base
 - (ii) Colorimetry**
 - a) Estimation of copper by colorimetric method
 - (iii) pH metry**
 - a) Titration of strong acid vs. strong base by pH metry
- 3. Physical properties**
 - a) Determination of viscosity of sample oil by Redwood viscometer.
- 4. Preparation of Organic Compounds:**
 - a) Preparation of soap
 - b) Preparation of Nano particles.

(13MTH002) LINEAR ALGEBRA AND ORDINARY DIFFERENTIAL EQUATIONS

Course prerequisites: Matrices, Differentiation and Integration

Course Objectives:

1. Understand the Echolen form and Normal form of a matrix and its applications in solving linear system of equations.
2. Understand the methods of solving first order differential equations and learn about its applications to L-R and R-C circuits.
3. Apply the convolution theorem to evaluate Laplace Transform of the functions.
4. Apply Z-Transforms in solving the difference equations.

Course Outcomes:

Students will be able to

1. Find the rank using Echolen form and Normal form.
2. Solve the problems in first order and second order differential equations.
3. learn Laplace Transform as a tool.
4. Evaluate the Z-Transform of the given function.

UNIT-I

LINEAR ALGEBRA – MATRICES:

Rank of matrix, Hermitian and skew – Hermitian matrices, Inverse of matrix by elementary operations. Consistency of linear simultaneous equations, Eigen values and eigen vectors, Diagonalisation of a matrix (including the case of repeated eigen values). Caley – Hamilton theorem (without proof), Quadratic forms - reduction of quadratic form to canonical form by linear transformation.

UNIT-II

ORDINARY DIFFERENTIAL EQUATIONS AND THEIR APPLICATIONS:

Differential equations of first order and first degree - Exact differential equation , Linear and Bernoulli differential equation , Applications of differential equations of first order and first degree - Newton's law of cooling, Law of natural growth and decay, Orthogonal trajectories, and basic circuits(L-R Circuits, R-C Circuits).

UNIT-III

DIFFERENTIAL EQUATIONS OF HIGHER ORDER AND THEIR APPLICATIONS:

Differential equations of higher order - homogeneous and non-homogenous type, differential equations of second order and higher order with constant coefficients with

right hand side term of the type e^{ax} , $\sin(ax)$, $\cos(ax)$, polynomials in x , e^{ax} , $V(x)$, $x V(x)$ and method of variation of parameters; Euler-Cauchy's 2nd order differential equations, applications to spring mass system, Simple harmonic motion and L-C-R Circuits.

UNIT-IV

LAPLACE TRANSFORMS:

Existence condition, Laplace transform of standard functions, Properties, Inverse Laplace transform of functions using partial fractions, Convolution and Convolution theorem (statement only). Solving linear differential equations using Laplace transform. Unit step function, Impulse function and Periodic function and their transforms.

UNIT- V

Z-TRANSFORMS:

Z-transform; Inverse z-transform; Properties, initial and final value theorems; Convolution theorem (theorems without proofs); Difference equations; Solutions of difference equations using z-transform.

TEXT BOOKS:

1. Higher Engineering Mathematics – B. S. Grewal, Khanna publishers.
2. A First Course in Differential Equations by Dennis G. Zill; Publisher: Brooks Cole publishers.
3. Advanced Engineering Mathematics by R.K.Jain and S.R.K.Iyengar; Narosa Publications.

REFERENCE BOOKS:

1. Advanced Engineering Mathematics by Erwin Kreyszig, 8th Edition; Publisher: John Wiley.
2. Advanced Engineering Mathematics by Peter V. O'Neil, 9th Edition; Publisher: Cengage Learning

(13MTH003) NUMERICAL ANALYSIS AND LINEAR PROGRAMMING

Course prerequisites : Elementary row transformations of matrices, differentiation and integration.

Course objectives:

1. Understand the numerical methods for non linear systems, evaluating definite integrals and ordinary differential equations.
2. Understand various methods of interpolation.
3. Understand the simplex method and methods to solve the transportation problem.

Course outcomes:

Student will be able to

1. Apply the numerical methods to find a root of algebraic and transcendental equations.
2. Apply the numerical methods to find the solutions of ordinary differential equations.
3. Use simplex method procedure to optimize a linear function.
4. Solve transportation problems

UNIT I

Solutions of non-linear systems:

Introduction; Mathematical preliminaries; Solution of algebraic and transcendental equations – the iteration method, the bisection method, the method of false position, Newton - Raphson method, and their order of convergence.

UNIT II

Interpolation:

Introduction; Errors in polynomial interpolation; Finite differences; Forward differences; Backward differences; Central differences; Symbolic relations and separation of symbols; Differences of a polynomial; Newton's formulae for interpolation; Central difference interpolation formulae; Gauss's central difference formulae; Lagrange and Hermite interpolation formulae.

UNIT III

Numerical differentiation and Integration:

Numerical differentiation based on interpolation, Numerical integration: Trapezoidal rule, Simpson's 1/3 rule, and Simpson's 3/8 rule.

Numerical solutions of ordinary differential equations:

Solution of initial value problems by Taylor's series - Picard's method of successive approximations, Euler's method, and Runge - Kutta methods; Predictor Corrector methods - Adams Bashforth method- Adams Moulton method and Milne's method (without proofs).

UNIT IV**Linear programming**

Basic concepts; problem formulation, graphical method, canonical and standard forms of LPP simplex method, Artificial variables technique- Big-M method,

UNIT V**Transportation problems:**

Balanced and Unbalanced transportation problems- North-West corner rule, Least cost method, Vogel's approximation method (VAM) and MODI method.

TEXT BOOKS:

1. Elementary Numerical Analysis – B.S. Grewal, 3rd edition Publisher: Khanna Publishers
2. Operations Research - Taha H.A, Publisher: Mcmillan Publishing:

(13PHY004) APPLIED PHYSICS

Course Objectives:

1. To learn the basic operators and expectation values in quantum mechanics
2. To learn different semiconductors and to calculate their carrier concentration and semiconductor devices
3. To learn the properties of magnetic materials and classification, Dielectric materials
4. To learn the concept and applications of superconductors

Course Outcomes:

After completion of the course, the students will be able to:

1. Recognize different types of operators and their applications and Learn expectation values and understand the tunneling effect.
2. To identify different semiconductors and to calculate their carrier concentration.
3. Learn the magnetic properties of materials classify the magnetic materials into Dia, Para and ferromagnetic materials.
4. Learn the characteristics, properties and applications of superconductors and magnetic materials.

UNIT-I

ADVANCED QUANTUM MECHANICS:

Schrodinger equation revisited: Time dependent wave equation, Linearity and Superposition, Expectation values and Operators (Position, Momentum and Energy operators), Finite Potential well, Tunnel Effect, Problems.

UNIT-II

SEMICONDUCTOR PHYSICS:

Fermi level in Intrinsic and Extrinsic semiconductors - Intrinsic semiconductor and carrier concentration – Extrinsic semiconductor and carrier concentration – Equation of continuity – Direct and indirect band gap semiconductors - Hall Effect.

PHYSICS OF SEMICONDUCTOR DEVICES:

Formation of p-n junction – open circuit p-n junction – Energy diagram of diode – i/v characteristics of p-n junction diode – p-n diode as a rectifier – Diode equation – Introduction to LED, BJT and FET.

UNIT-III

MAGNETIC PROPERTIES OF MATERIALS:

Permeability, Field intensity, magnetic field induction, Magnetization and Magnetic susceptibility – Origin of magnetic moment, Bohr magneton – Classification of magnetic materials (Dia, Para and Ferro)- Domain theory of ferromagnetism, Hysteresis curve – Soft and Hard magnetic materials – Ferrites and their applications.

UNIT-IV

DIELECTRIC PROPERTIES:

Electric dipole, Dipole moment, Dielectric constant, Electronic, Ionic and Orientation Polarization – Calculation of Polarizabilities – Frequency dependence of Polarization- Internal fields – Clausius – Mossotti equation –Piezo and Ferro electricity.

UNIT-V

SUPERCONDUCTORS:

Experimental survey and superconductivity phenomenon, – Meissner effect – Critical fields and Persistent currents, Type I and Type II superconductors - London equations- penetration depth-flux quantization-BCS Theory- Josephson Effect– High temperature Superconductors, Applications of Superconductors.

TEXT BOOKS:

1. Concepts of Modern physics by Arthur Beiser, McGraw Hill Inc.
2. Applied Physics by P.K.Mittal, IK International Publishing House (P) Ltd
3. Electronic Devices and circuits by Milliman and Halkias

(13CSE032) CODE OF ETHICS

Course Objectives

1. To be aware of Contribute to society and human well-being
2. To familiarize with the concepts of Avoid harm to others
3. To learn more about Honor property rights
4. To understand important concepts Professional Responsibility

Course Outcomes

Upon completion of this course, students should be able to:

1. Be aware of Work to extend public knowledge, understanding, and appreciation of information processing and its consequences.
2. Be aware of the social and ethical issues associated with human performance measurement .
- 3 Assess the use of technology equipment to intimidate, insult, embarrass, or harass others.

UNIT – I: GENERAL MORAL IMPERATIVES.

1.1 Contribute to society and human well-being.

This principle concerning the quality of life of all people affirms an obligation to protect fundamental human rights and to respect the diversity of all cultures. An essential aim of computing professionals is to minimize negative consequences of computing systems, including threats to health and safety. When designing or implementing systems, computing professionals must attempt to ensure that the products of their efforts will be used in socially responsible ways, will meet social needs, and will avoid harmful effects to health and welfare.

In addition to a safe social environment, human well-being includes a safe natural environment. Therefore, computing professionals who design and develop systems must be alert to, and make others aware of, any potential damage to the local or global environment.

1.2 Avoid harm to others.

"Harm" means injury or negative consequences, such as undesirable loss of information, loss of property, property damage, or unwanted environmental impacts.

This principle prohibits use of computing technology in ways that result in harm to any of the following: users, the general public, employees, and employers. Harmful actions include intentional destruction or modification of files and programs leading to serious loss of resources or unnecessary expenditure of human resources such as the time and effort required to purge systems of "computer viruses."

Well-intended actions, including those that accomplish assigned duties, may lead to harm unexpectedly. In such an event the responsible person or persons are obligated to undo or mitigate the negative consequences as much as possible. One way to avoid unintentional harm is to carefully consider potential impacts on all those affected by decisions made during design and implementation.

To minimize the possibility of indirectly harming others, computing professionals must minimize malfunctions by following generally accepted standards for system design and testing. Furthermore, it is often necessary to assess the social consequences of systems to project the likelihood of any serious harm to others. If system features are misrepresented to users, coworkers, or supervisors, the individual computing professional is responsible for any resulting injury.

In the work environment the computing professional has the additional obligation to report any signs of system dangers that might result in serious personal or social damage. If one's superiors do not act to curtail or mitigate such dangers, it may be necessary to "blow the whistle" to help correct the problem or reduce the risk. However, capricious or misguided reporting of violations can, itself, be harmful. Before reporting violations, all relevant aspects of the incident must be thoroughly assessed. In particular, the assessment of risk and responsibility must be credible. It is suggested that advice be sought from other computing professionals.

1.3 Be honest and trustworthy.

Honesty is an essential component of trust. Without trust an organization cannot function effectively. The honest computing professional will not make deliberately false or deceptive claims about a system or system design, but will instead provide full disclosure of all pertinent system limitations and problems.

A computer professional has a duty to be honest about his or her own qualifications, and about any circumstances that might lead to conflicts of interest.

Membership in volunteer organizations such as ACM may at times place individuals in situations where their statements or actions could be interpreted as carrying the "weight" of a larger group of professionals. An ACM member will exercise care to not misrepresent ACM or positions and policies of ACM or any ACM units.

1.4 Be fair and take action not to discriminate.

The values of equality, tolerance, respect for others, and the principles of equal justice govern this imperative. Discrimination on the basis of race, sex, religion, age, disability,

national origin, or other such factors is an explicit violation of ACM policy and will not be tolerated.

Inequities between different groups of people may result from the use or misuse of information and technology. In a fair society, all individuals would have equal opportunity to participate in, or benefit from, the use of computer resources regardless of race, sex, religion, age, disability, national origin or other such similar factors. However, these ideals do not justify unauthorized use of computer resources nor do they provide an adequate basis for violation of any other ethical imperatives of this code.

1.5 Honor property rights including copyrights and patent.

Violation of copyrights, patents, trade secrets and the terms of license agreements is prohibited by law in most circumstances. Even when software is not so protected, such violations are contrary to professional behavior. Copies of software should be made only with proper authorization. Unauthorized duplication of materials must not be condoned.

1.6 Give proper credit for intellectual property.

Computing professionals are obligated to protect the integrity of intellectual property. Specifically, one must not take credit for other's ideas or work, even in cases where the work has not been explicitly protected by copyright, patent, etc.

1.7 Respect the privacy of others.

Computing and communication technology enables the collection and exchange of personal information on a scale unprecedented in the history of civilization. Thus there is increased potential for violating the privacy of individuals and groups. It is the responsibility of professionals to maintain the privacy and integrity of data describing individuals. This includes taking precautions to ensure the accuracy of data, as well as protecting it from unauthorized access or accidental disclosure to inappropriate individuals. Furthermore, procedures must be established to allow individuals to review their records and correct inaccuracies.

This imperative implies that only the necessary amount of personal information be collected in a system, that retention and disposal periods for that information be clearly defined and enforced, and that personal information gathered for a specific purpose not be used for other purposes without consent of the individual(s). These principles apply to electronic communications, including electronic mail, and prohibit procedures that capture or monitor electronic user data, including messages, without the permission of users or bona fide authorization related to system operation and maintenance. User data observed during the normal duties of system operation and maintenance must be treated with strictest confidentiality, except in cases where it is evidence for the violation of law, organizational regulations, or this Code. In these cases, the nature or contents of that information must be disclosed only to proper authorities.

1.8 Honor confidentiality.

The principle of honesty extends to issues of confidentiality of information whenever one has made an explicit promise to honor confidentiality or, implicitly, when private information not directly related to the performance of one's duties becomes available. The ethical concern is to respect all obligations of confidentiality to employers, clients, and users unless discharged from such obligations by requirements of the law or other principles of this Code.

UNIT – II: MORE SPECIFIC PROFESSIONAL RESPONSIBILITIES.

2.1 Strive to achieve the highest quality, effectiveness and dignity in both the process and products of professional work.

Excellence is perhaps the most important obligation of a professional. The computing professional must strive to achieve quality and to be cognizant of the serious negative consequences that may result from poor quality in a system.

2.2 Acquire and maintain professional competence.

Excellence depends on individuals who take responsibility for acquiring and maintaining professional competence. A professional must participate in setting standards for appropriate levels of competence, and strive to achieve those standards. Upgrading technical knowledge and competence can be achieved in several ways: doing independent study; attending seminars, conferences, or courses; and being involved in professional organizations.

2.3 Know and respect existing laws pertaining to professional work.

ACM members must obey existing local, state, province, national, and international laws unless there is a compelling ethical basis not to do so. Policies and procedures of the organizations in which one participates must also be obeyed. But compliance must be balanced with the recognition that sometimes existing laws and rules may be immoral or inappropriate and, therefore, must be challenged. Violation of a law or regulation may be ethical when that law or rule has inadequate moral basis or when it conflicts with another law judged to be more important. If one decides to violate a law or rule because it is viewed as unethical, or for any other reason, one must fully accept responsibility for one's actions and for the consequences.

2.4 Accept and provide appropriate professional review.

Quality professional work, especially in the computing profession, depends on professional reviewing and critiquing. Whenever appropriate, individual members should seek and utilize peer review as well as provide critical review of the work of others.

2.5 Give comprehensive and thorough evaluations of computer systems and their impacts, including analysis of possible risks.

Computer professionals must strive to be perceptive, thorough, and objective when evaluating, recommending, and presenting system descriptions and alternatives.

Computer professionals are in a position of special trust, and therefore have a special responsibility to provide objective, credible evaluations to employers, clients, users, and the public. When providing evaluations the professional must also identify any relevant conflicts of interest.

Avoiding harm, any signs of danger from systems must be reported to those who have opportunity and/or responsibility to resolve them.

2.6 Honor contracts, agreements, and assigned responsibilities.

Honoring one's commitments is a matter of integrity and honesty. For the computer professional this includes ensuring that system elements perform as intended. Also, when one contracts for work with another party, one has an obligation to keep that party properly informed about progress toward completing that work.

A computing professional has a responsibility to request a change in any assignment that he or she feels cannot be completed as defined. Only after serious consideration and with full disclosure of risks and concerns to the employer or client, should one accept the assignment. The major underlying principle here is the obligation to accept personal accountability for professional work. On some occasions other ethical principles may take greater priority.

A judgment that a specific assignment should not be performed may not be accepted. Having clearly identified one's concerns and reasons for that judgment, but failing to procure a change in that assignment, one may yet be obligated, by contract or by law, to proceed as directed. The computing professional's ethical judgment should be the final guide in deciding whether or not to proceed. Regardless of the decision, one must accept the responsibility for the consequences.

However, performing assignments "against one's own judgment" does not relieve the professional of responsibility for any negative consequences.

2.7 Improve public understanding of computing and its consequences.

Computing professionals have a responsibility to share technical knowledge with the public by encouraging understanding of computing, including the impacts of computer systems and their limitations. This imperative implies an obligation to counter any false views related to computing.

2.8 Access computing and communication resources only when authorized to do so.

Theft or destruction of tangible and electronic property is prohibited - "Avoid harm to others." Trespassing and unauthorized use of a computer or communication system is addressed by this imperative. Trespassing includes accessing communication networks and computer systems, or accounts and/or files associated with those systems, without explicit authorization to do so. Individuals and organizations have the right to restrict access to their systems so long as they do not violate the discrimination principle. No one should enter or use another's computer system, software, or data

files without permission. One must always have appropriate approval before using system resources, including communication ports, file space, other system peripherals, and computer time.

UNIT – III: ORGANIZATIONAL LEADERSHIP IMPERATIVES.

BACKGROUND NOTE: This section draws extensively from the draft IFIP Code of Ethics, especially its sections on organizational ethics and international concerns. The ethical obligations of organizations tend to be neglected in most codes of professional conduct, perhaps because these codes are written from the perspective of the individual member. This dilemma is addressed by stating these imperatives from the perspective of the organizational leader. In this context "leader" is viewed as any organizational member who has leadership or educational responsibilities. These imperatives generally may apply to organizations as well as their leaders. In this context "organizations" are corporations, government agencies, and other "employers," as well as volunteer professional organizations.

3.1 Articulate social responsibilities of members of an organizational unit and encourage full acceptance of those responsibilities.

Because organizations of all kinds have impacts on the public, they must accept responsibilities to society. Organizational procedures and attitudes oriented toward quality and the welfare of society will reduce harm to members of the public, thereby serving public interest and fulfilling social responsibility. Therefore, organizational leaders must encourage full participation in meeting social responsibilities as well as quality performance.

3.2 Manage personnel and resources to design and build information systems that enhance the quality of working life.

Organizational leaders are responsible for ensuring that computer systems enhance, not degrade, the quality of working life. When implementing a computer system, organizations must consider the personal and professional development, physical safety, and human dignity of all workers. Appropriate human-computer ergonomic standards should be considered in system design and in the workplace.

3.3 Acknowledge and support proper and authorized uses of an organization's computing and communication resources.

Because computer systems can become tools to harm as well as to benefit an organization, the leadership has the responsibility to clearly define appropriate and inappropriate uses of organizational computing resources. While the number and scope of such rules should be minimal, they should be fully enforced when established.

3.4 Ensure that users and those who will be affected by a system have their needs clearly articulated during the assessment and design of requirements; later the system must be validated to meet requirements.

Current system users, potential users and other persons whose lives may be affected by a system must have their needs assessed and incorporated in the statement of requirements. System validation should ensure compliance with those requirements.

3.5 Articulate and support policies that protect the dignity of users and others affected by a computing system.

Designing or implementing systems that deliberately or inadvertently demean individuals or groups is ethically unacceptable. Computer professionals who are in decision making positions should verify that systems are designed and implemented to protect personal privacy and enhance personal dignity.

3.6 Create opportunities for members of the organization to learn the principles and limitations of computer systems.

This complements the imperative on public understanding. Educational opportunities are essential to facilitate optimal participation of all organizational members. Opportunities must be available to all members to help them improve their knowledge and skills in computing, including courses that familiarize them with the consequences and limitations of particular types of systems. In particular, professionals must be made aware of the dangers of building systems around oversimplified models, the improbability of anticipating and designing for every possible operating condition, and other issues related to the complexity of this profession.

UNIT-IV: Software Engineering Code of Ethics and Professional Practice -Public

- 4.1. Accept full responsibility for their own work.
- 4.2. Moderate the interests of the software engineer, the employer, the client and the users with the public good.
- 4.3. Approve software only if they have a well-founded belief that it is safe, meets specifications, passes appropriate tests, and does not diminish quality of life, diminish privacy or harm the environment. The ultimate effect of the work should be to the public good.
- 4.4. Disclose to appropriate persons or authorities any actual or potential danger to the user, the public, or the environment, that they reasonably believe to be associated with software or related documents.
- 4.5. Cooperate in efforts to address matters of grave public concern caused by software, its installation, maintenance, support or documentation.
- 4.6. Be fair and avoid deception in all statements, particularly public ones, concerning software or related documents, methods and tools.
- 4.7. Consider issues of physical disabilities, allocation of resources, economic disadvantage and other factors that can diminish access to the benefits of software.
- 4.8. Be encouraged to volunteer professional skills to good causes and contribute to public education concerning the discipline.

UNIT V: Software Engineering Code of Ethics and Professional Practice - CLIENT AND EMPLOYER

- 5.1. Provide service in their areas of competence, being honest and forthright about any limitations of their experience and education.
- 5.2. Not knowingly use software that is obtained or retained either illegally or unethically.
- 5.3. Use the property of a client or employer only in ways properly authorized, and with the client's or employer's knowledge and consent.
- 5.4. Ensure that any document upon which they rely has been approved, when required, by someone authorized to approve it.
- 5.5. Keep private any confidential information gained in their professional work, where such confidentiality is consistent with the public interest and consistent with the law.
- 5.6. Identify, document, collect evidence and report to the client or the employer promptly if, in their opinion, a project is likely to fail, to prove too expensive, to violate intellectual property law, or otherwise to be problematic.
- 5.7. Identify, document, and report significant issues of social concern, of which they are aware, in software or related documents, to the employer or the client.
- 5.8. Accept no outside work detrimental to the work they perform for their primary employer.
- 5.9. Promote no interest adverse to their employer or client, unless a higher ethical concern is being compromised; in that case, inform the employer or another appropriate authority of the ethical concern.

(13ITD002) DATA STRUCTURES

Course Objectives:

1. To teach efficient storage mechanisms of data for an easy access.
2. To design and implementation of various basic and advanced data structures.
3. To introduce various techniques for representation of the data in the real world.
4. To develop application using data structures and to improve the logical ability

Course Outcomes:

1. Student will be able to choose appropriate data structure as applied to specified problem definition.
2. Student will be able to handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
3. Students will be able to apply concepts learned in various domains like DBMS, compiler construction etc.
4. Students will be able to use linear and non-linear data structures like stacks, queues, and linked list.

UNIT-I

Data Structures – Introduction to Data Structures, abstract data types, Linear list – singly linked list implementation, insertion, deletion and searching operations on linear list, circular linked list implementation, Double linked list implementation, insertion, deletion and searching operations. Applications of linked lists.

UNIT –II

Stacks-Operations, array and linked representations of stacks, stack applications-infix to postfix conversion, postfix expression evaluation, recursion implementation.

UNIT-III

Queues-operations, array and linked representations. Circular Queue operations, Dequeue, applications of queue.

UNIT-IV

Trees – Definitions, Binary tree representation, Binary search tree, binary tree traversals.

Graphs – Definitions, Graph representations, Graph traversals.

UNIT-V

Searching and Sorting – Big O Notation, Sorting- selection sort, bubble sort, insertion sort, quick sort, merge sort,

Searching-linear and binary search methods.

(13MED176)ENGINEERING DRAWING

Course Prerequisites: Geometrical construction

Course Objectives:

1. Understand the usage of drawing instruments.
2. Understand the construction methods for drawing conic sections
3. Identify the significance of curves in engineering practice like bridges, building, arches etc.,
4. Understand first and third angle projections and methods.

Course Outcomes:

1. Visualize the objects looking into projections.
2. Convert projections for isometric to orthographic and vice versa
3. Work with Auto CAD for the above

UNIT – I

Introduction to Engineering Drawing; Introduction to AutoCAD; Construction of Ellipse, Parabola and Hyperbola – General and Special methods; Cycloidal curves.

UNIT – II

Projections of points; Projections of lines and planes – inclined to one plane and inclined to both the planes.

UNIT – III

Projections of solids: Prism, Pyramid, Cylinder, Cone - axis inclined to one plane and inclined to both the planes.

UNIT – IV

Isometric projections of lines, planes and simple solids.

UNIT – V

Conversion of orthographic views into isometric views and vice-versa.

(13ITD102)DATA STRUCTURES LABORATORY

Course Objectives:

1. To develop skills to design and analyze simple linear data structures
2. To develop skills to design and analyze simple nonlinear data structures
3. To strengthen the ability to identify and apply the suitable data structure for the given real world problem
4. To gain knowledge in practical applications of data structures

Course Outcomes:

1. To be able to design and analyze the time efficiency of the data structure
2. To be able to design and analyze the space efficiency of the data structure
3. To be capable to identify the appropriate data structure for given problem
4. Have practical knowledge on the application of data structures

TASK 1:

1. Write a program for creation, Search and Traversal of Single Linked List
2. Write a program to perform insertion and deletion operations in Single Linked List
3. Write a program to merge two single linked lists

TASK 2:

1. Write a program for creation, Search and Traversal of Circular Linked List
2. Write a program to perform insertion and deletion operations in Circular Linked List

TASK 3:

1. Write a program for creation, Search and Traversal of Double Linked List
2. Write a program to perform insertion and deletion operations in Double Linked List

TASK 4:

1. Write a program to implement stack using Arrays
2. Write a program to implement stack using Linked List

TASK 5:

1. Write a program to convert infix expression to postfix expression using stack
2. Write a program to evaluate postfix expression

TASK 6:

1. Programs using recursion
2. Write a program to convert infix expression to prefix expression using stack

TASK 7:

1. Write a program to implement Linear queue using Array
2. Write a program to implement Linear queue using Linked List

TASK 8:

1. Write a program to implement insertions and deletions in a circular Queue
2. Write a program to perform search and count operations in a circular queue

TASK 9:

1. Write a program to implement insertions and deletions in a Dequeue
2. Write a program to perform search and count operations in Dequeue

TASK 10: Mid Term Exam

TASK 11:

1. Write a program to implement Linear search
2. Write a program to implement Binary Search

TASK 12:

1. Write a program to implement Selection sort
2. Write a program to implement Bubble sort
3. Write a program to implement Insertion sort

TASK 13:

1. Write a program to implement Merge sort
2. Write a program to implement Quick sort

TASK 14:

1. Implementation of a binary tree representation using Arrays
2. Write a program to implement tree traversals.

TASK 15:

1. Implementation of a Graph representation using Adjacency Matrix
2. Write a program to implement graph traversals.

TASK 16:

Final Internal Lab Exam

TEXT BOOKS:

1. C Programming & Data Structures, B.A.Forouzan and R.F. Gilberg, Third Edition, Cengage Learning.
2. Data Structures Using C (Paperback) by Aaron M. Tenenbaum

(13ENG101) ENGLISH LANGUAGE COMMUNICATIONS SKILLS LABORATORY

The English language Communication Skills Lab aims to provide practice in all the four skills of LSRW, with a special emphasis on listening and speaking skills.

Course Objectives

1. Provide ample practice in LSRW skills.
2. Provide practice in grammatical construction, structural patterns, word usage and improve comprehension abilities in the students.
3. Train students to use neutral pronunciation through phonetic sounds, symbols, stress and intonation.
4. Enable students to transfer information from verbal to graphic representation and vice versa.
5. Train students to use effective language for oral presentations, public speaking, role play and situational dialogue.

Course Outcomes

1. Comprehend spoken and written discourse.
2. Speak fluently with neutral pronunciation and exhibit interpersonal skills.
3. Write accurately, coherently and lucidly making appropriate use of words depending on context and present data clearly.
4. Introduce one self to people and be able to speak extempore.

Syllabus for Lab Sessions

Unit 1

Multimedia Lab

1. Grammar : Nouns and Pronouns; Articles; The Present Tense
2. Vocabulary Lesson 1
3. Listening Comprehension

Communication Skills Lab: Introduction of Self and others

Unit 2

Multimedia Lab:

1. Grammar: Concord; Adjectives; The Past Tense
2. Vocabulary: Lesson 2
3. Listening Skills

Communication Skills Lab: Seeking and Giving Information, Giving and Taking Instructions

Unit 3

Multimedia Lab

1. Grammar --- Adverbs, Conjunctions, Prepositions; The Future Tense
2. Vocabulary Lesson 3
3. Telephoning Skills

Communication Skills Lab: Role Play/ Situational Dialogues

Unit 4

Multimedia Lab:

1. Grammar ---- Active and Passive Voice; Language Analysis
2. Vocabulary : Lesson 4
3. Listening Comprehension

Communication Skills Lab: i) JAM/ Short Talk ii) Information Transfer
a) Interpretation of Graph

Unit 5

Multimedia Lab:

1. **Introduction to Technical Writing**
 - A. Definition of a Technical Term
 - B. Description of a Mechanism
 - C. Description of a Technical Process
2. Vocabulary : Lesson 5

Communication Skills Lab : Presentation Skills: Oral Presentation

Multimedia Lab Requirements

The English Language Lab shall have two parts:

- i) **The Computer aided Language Lab** for 60 students with 60 systems, one master console, LAN facility and English language software for self- study by learners.
- ii) **The Communication Skills Lab** with movable chairs and audio-visual aids with a P.A System, a T. V., a digital stereo –audio & video system and camcorder etc.
- iii) **System Requirement (Hardware component):**
Computer network with LAN with minimum 60 multimedia systems with the following specifications:
 - i) P – IV Processor
 - ii) Speed – 2.8 GHZ
 - iii) RAM – 512 MB Minimum
 - iv) Hard Disk – 80 GB
 - v) Headphones of High quality

iv) Suggested Software:

The software consisting of the prescribed topics elaborated above should be procured and used.

List of Software:

- **Clarity Pronunciation Power** – part II
- **Oxford Advanced Learner's Compass**, 7th Edition
- **DELTA's key to the Next Generation TOEFL Test: Advanced Skill Practice.**
- **Lingua TOEFL CBT Insider**, by Dreamtech
- **TOEFL & GRE** (KAPLAN, AARCO & BARRONS, USA, Cracking GRE by CLIFFS)

(13MTH007) PROBABILITY, STATISTICS AND QUEUING THEORY

Course prerequisites: permutations and combinations, basic statistics

Course Objectives:

1. Understand the elementary ideas in basic probability.
2. Understand the different types of probability distribution functions
3. Understand the basic concepts in estimation theory and test of hypothesis
4. Understand the basic concepts of queuing theory.

Course Outcomes:

Students will be able to

1. Solve problems involving basic probability.
2. Apply the knowledge of different probability distributions to Test of Hypothesis.
3. Calculate correlation, regression coefficients.
4. Apply the knowledge of different probability distributions to solve problems in queuing theory.

UNIT I

Probability and Distributions

Sample space and events, Probability- The axioms of probability, some elementary theorems, conditional probability, Baye's theorem. Random variables - discrete and continuous. Distributions - Binomial, Poisson and Normal distributions–related properties.

UNIT II

Correlation and Regression

Coefficient of correlation, regression coefficient, the lines of regression, rank correlation

UNIT III

Sampling Distributions and Testing of Hypothesis

Sampling distributions, sampling distribution of means (σ known and unknown). Point estimation, interval estimation. Tests of hypothesis - null hypothesis, alternate hypothesis, type I, type II errors, critical region. Inferences concerning means and proportions- Large samples- test of hypothesis for single mean and difference between the means. Test of hypothesis for the proportions- single and difference between the proportions, confidence interval for the mean and proportions.

UNIT IV

Tests of significance- Small samples

Tests of significance-t distributions, confidence interval for the t- distribution, F-distributions and Chi square distributions.

UNIT V

Queuing Theory

Queuing theory -Arrival process and service process- Pure birth and death process, M/M/1 model with finite and infinite capacities, M/M/C model with infinite capacity.

TEXT BOOKS:

1. Probability and Statistics for Engineers – Richard .A.Johanson, 1995, 5th Edition, Prentice-Hall.
2. Some problems in the theory of queues. -Kendall, D. G. (1951) Journal of the Royal Statistical Society, Series B, **13**, 151–185..

REFERENCE BOOKS:

1. Applied Statistics for Engineers-Jay.L.Devore, Nicholas. R.Famum, Jimmy.A.Do, 3rd Edition, Gengage
2. An Introduction to Probability Theory and Its Applications- Feller, W. (1968– Volume I and II. 2nd edn. John Wiley Inc., New York, NY.
3. The Single Server Queue -Cohen, J. W. (1969) .Wiley Interscience, New York, NY.

(13EEE078) ELEMENTS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Course Objectives:

1. To understand the basic concepts of circuit analysis
2. To analyze electrical circuits using network theorems and analysis of AC circuits
3. To learn principle of operation, construction and characteristics of various electronic devices.
4. To know about different applications of these devices

Course Outcomes:

After going through this course the student will be able to

1. Apply various network reduction techniques for electrical circuit analysis
2. Analyze electrical circuits using network theorems
3. Use semiconductor devices in real life applications
4. Analyze and Design applications using these devices

UNIT-I

Introduction to Electrical Circuits: Circuit Concept – Types of Elements– Types of sources-R-L-C parameters-Kirchhoff's laws- network reduction techniques–series, parallel, series parallel circuits, Source transformation–Mesh and Nodal analysis

UNIT-II

Network Theorems: Star-delta transformation, Super position, Reciprocity, Thevenin's, Norton's, Maximum power transfer theorems-Application of theorems for the analysis of DC circuits.

UNIT-III

AC Circuits: Root mean square, average values, form factor and peak factor of alternating currents and voltages, Response of R-L, R-C and R-L-C circuits with sinusoidal excitation-Concept of reactance, impedance, phase and phase difference, Power factor, Real and reactive powers.

Diodes, Rectifiers and Filters:p-n Junction Diode, symbol, Diode Equation, Volt-Ampere Characteristics, Half wave Rectifier, Full wave rectifier, Bridge Rectifier, (Simple problems), Zener Diode, LED, LCD, Photo Diode.

UNIT-IV

Bipolar Junction Transistor (BJT)

NPN, PNP transistor Construction and principle of operation, symbol, input and output characteristics of transistor in Common Base, Common Emitter and Common

Collector Configurations, Relation between alpha, beta and gamma, Transistor as an Amplifier.

UNIT-V

Introduction to Amplifies

Definition of voltage gain, current gain, input resistance and output resistance in amplifies Concept of feedback, classification of feedback amplifies, General characteristics of negative feedback amplifies, effect of feedback on amplifies, Introduction to feedback topologies, Barkhausen criteria, principle of operation of LC and crystal oscillators

(13CSE003) DIGITAL LOGIC DESIGN

Course Objectives:

This course covers the basics of digital logic circuits and design:

1. Boolean algebra and number systems introduces the student to the fundamentals of combinational logic design, their minimization(using K-Maps/Tabulation Methods), this enables building of PLD's
2. Hypothesize sequential circuits (both synchronous and asynchronous).
3. Students are provided with an opportunity to implement all the logic circuits using VHDL.
4. Design, simulate, build, and debug combinational and sequential digital circuits based on an abstract functional specification.
5. Understand the basic internal workings of the central processing unit of a computer and its interface with memory and input/output subsystems.

Course Outcomes:

Upon completion of this course, students should be able to:

1. To apply the principles of Boolean algebra to manipulate and minimize logic expressions.
2. To understand the functionalities, and minimization techniques using of all logical gates(NAND, NOR, AND, OR, NOT, XOR, XNOR...)
3. To hypothesize combinational circuits using adders, decoders, Multiplexers, Encoders, De-Multiplexers, ROM , RAM, PLD's
4. Understand operation of sequential(sync. & async.) circuits (flip-flops, counters, registers, and register) and in analyzing the operation of sequential circuits along with hazards handling
5. For all the above concepts students will be able to simulate the functionalities using Verilog HDL with the support of the Lab.

UNIT-I

NUMBERS SYSTEMS AND CODES:-

Review of number systems- number base conversion-binary arithmetic- binary weighted and non-weighted codes – Complements-Signed binary numbers-Error Detection and Correcting Codes-Binary Logic.

UNIT-II

BOOLEAN ALGEBRA and GATE LEVEL MINIMIZATION:-

Postulates and theorems- representation of switching functions-SOP and POS forms – Canonical forms-digital logic gates –Karnaugh Maps –minimization using three variable, four variable and five variable K-Maps, Don't Care Conditions- NAND and NOR implementation , Other Two-Level Implementation –Exclusive –OR function - Integrated Circuits-Hardware Description Language(HDL)

UNIT-III

DESIGN OF COMBINATIONAL CIRCUITS:-

Tabular Minimization- Combinational Circuits- Analysis and Design Procedure- Binary adder and subtractors – Carry Look-ahead adder-Decimal adder-Binary multiplier-magnitude comparator-BCD adder- Decoders- Encoders-Multiplexers-Random Access Memory-Read Only Memory-Programmable Logic Array-Programmable Array Logic - HDL for Combinational Circuits

UNIT-IV

DESIGN OF SEQUENTIAL CIRCUITS:-

Combinational Vs Sequential Circuits – Latches-Flip Flops-RS flip flop, JK flip flop, T flip flop, D flip flop, Master-Slave Flip flop- Flip Flops excitation functions –Conversion of one flip flop to another flip flop- Asynchronous Vs Synchronous circuits-Analysis of clocked sequential circuits-State Table-State Diagram-State Reduction and State Assignment-Mealy and Moore Machines-capabilities and limitations of Finite State Machine-State equivalence and machine minimization-Design of synchronous counters- Ripple Counters-Asynchronous counters-Registers-Shift Registers- HDL for Sequential circuits.

UNIT-V

ASYNCHRONOUS SEQUENTIAL LOGIC:-

Introduction-Analysis Procedure, Circuits with Latches, Design Procedure-Reduction of state and flow Tables – Race Free State Assignment Hazards, Design examples.

TEXT BOOKS:

1. DIGITAL DESIGN, Third Edition, M.Morris Mano, Pearson Education/PHI.
2. FUNDAMENTALS OF LOGIC DESIGN, Roth, 5th Edition,Thomson.

(13CSE002) MATHEMATICAL FOUNDATIONS FOR COMPUTER SCIENCE

Course objectives:

1. Reason mathematically about basic data types and structures used in computer algorithms and systems.
2. Distinguish rigorous definitions and conclusions from merely plausible ones.
3. Synthesize elementary proofs, especially proofs by induction.
4. Model and analyze computational processes using analytic and combinatorial methods.
5. Apply different methods for solving recurrence relations.

Course outcomes:

On successful completion of this course, you will be able to

1. Understand the theory and techniques of mathematical logic, graphs and algebraic systems.
2. Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems.
3. Communicate mathematical ideas
4. Learn the basic applications of set theory and relations.
5. Define the various methods for solving recurrence relations.

UNIT- I

Mathematical Logic: Statements and notations, Connectives, Well formed formulas, Truth Tables, tautology, equivalence implication, Normal forms, Quantifiers, universal quantifiers.

Rules of inference, Consistency, proof of contradiction, Automatic Theorem Proving, Predicates: Predicative logic, Free & Bound variables.

UNIT- II

Set Theory: notations, inclusion and equality sets, operations on sets, venn diagrams. Relations: Properties of binary Relations, equivalence, transitive closure, compatibility and partial ordering relations, Hasse diagram. Functions: Inverse Function, Composition of functions, recursive Functions. Algebraic structures: Algebraic systems,

Examples and general properties, Semi groups and monoids, groups, and sub groups, Homomorphism, Isomorphism on groups and semi groups.

UNIT- III

Elementary Combinatorics: Basics of counting, Combinations & Permutations, with repetitions, Constrained repetitions, Binomial Coefficients, Binomial and Multinomial theorems, the principles of Inclusion – Exclusion, Pigeon hole principles and its application.

UNIT- IV

Recurrence Relations: Generating Functions, Function of Sequences, Calculating Coefficients of generating functions, Recurrence relations, Solving recurrence relation by substitution and Generating functions, the method of Characteristic roots, solution of Inhomogeneous Recurrence Relations.

UNIT- V

Graph Theory: Representation of Graphs, DFS, BFS, Spanning Trees, Planar Graphs. Graph Theory and Applications: Basic Concepts, Isomorphism and Sub graphs, Multi graphs and Euler circuits, Hamiltonian graphs, Chromatic Numbers.

TEXT BOOKS:

1. Discrete mathematical structures with applications to computer science ,J.P.Trembly ,R.Manohar, Tata M c Graw Hill.
2. Elements of Discrete Mathematics- A Computer Oriented Approach, C.L.Liu, D.P. Mohapatra, 3rd edition, Tata M c Graw Hill.

(13CMS001) BUSINESS ECONOMICS AND FINANCIAL ANALYSIS

Course objectives

1. To explain different forms of organizing private and public sector business enterprises and to analyze the significance of Business Economics in solving the problems of business enterprise. Also to define and analyze the concepts of Demand, Elasticity of Demand and Demand Forecasting Methods.
2. To analyze the various types of costs and to determine the level of output at which there is neither profit nor loss. To estimate capital requirements and to describe various sources of mobilizing funds. Also to identify least cost combinations of inputs produce desired quantity of output.
3. To describe the features of different market structure and pricing strategies.
4. To explain the basic accounting concepts and conventions. To elaborate the importance of finance function for evaluating the economic status of a business unit.

Course Outcomes

1. Select the suitable form of business organization which meets the requirement of selected business also perform decision – making function effectively in an uncertain frame work by applying concepts of Managerial Economics. Meet and manipulate the demand efficiently and plan the future course of action.
2. Apply right kind cost to reduce cost by paying attention towards the costs which can be reduced. Take decision whether to buy or produce? Reduce the cost of capital by selecting best source of fund mobilization and select best investment opportunity which yields higher rate of return.
3. Fix the right price which can best meets the predetermined objectives of the business firm under different market conditions. Able to select best combination of inputs to produce required quantity of output.
4. Prepare books of accounts and know over all financial position of the business enterprise which enables the concerned to take appropriate measures to improve the situation. Also interpret the financial position from difference angles and initiates the measures/ efforts in that direction.

UNIT - I

BUSINESS AND NEW ECONOMIC ENVIRONMENT

Characteristic features of business; Features and evaluation of sole proprietorship; Partnership; Joint stock company; Public enterprises and their types; Changing business environment in post- liberalization scenario.

UNIT - II

INTRODUCTION TO BUSINESS ECONOMICS AND DEMAND ANALYSIS

Definition; Nature and scope of managerial economics - demand analysis determinants; Law of demand and its exceptions.

ELASTICITY OF DEMAND AND DEMAND FORECASTING

Definition; Types; Measurement and significance of elasticity of demand; Demand forecasting; Factors governing demand forecasting; Methods of demand forecasting – (survey methods, statistical methods, Expert opinion method, Test marketing, Controlled experiments, and Judgmental approach to demand forecasting).

UNIT - III

COST ANALYSIS

Cost concepts - Opportunity cost, Fixed vs. Variable costs, Explicit costs vs. Implicit costs, and Out of pocket costs vs. Imputed costs; Break-even analysis (BEA) - determination of break-even point (simple problems), managerial significance, and limitations of BEA.

CAPITAL AND CAPITAL BUDGETING

Capital and its significance; Types of capital; Estimation of fixed and working capital requirements; Methods and sources of raising finance.

Nature and scope of capital budgeting; Features of capital budgeting proposals; Methods of capital budgeting - payback method, Accounting Rate of Return (ARR), and Net Present Value method (simple problems)

UNIT - IV

THEORY OF PRODUCTION

Production function - isoquants and isocosts, least cost combination of inputs, and laws of returns; Internal and external economies of scale.

MARKET STRUCTURES

Types of competition; Features of perfect competition, Monopoly, and Monopolistic competition; Price-output determination in case of perfect competition and Monopoly.

PRICING POLICIES AND METHODS

Cost plus pricing; Marginal cost pricing; Sealed bid pricing; Going rate pricing, Limit pricing, Market skimming pricing, Penetration pricing, Two-part pricing, Block pricing, Bundling pricing, Peak load pricing, Cross subsidization.

UNIT V

INTRODUCTION TO FINANCIAL ACCOUNTING

Double-entry book keeping; Journal; Ledger; Trial balance; Final accounts - trading account, profit and loss account, and balance sheet with simple adjustments.

FINANCIAL ANALYSIS THROUGH RATIOS

Computation; Analysis and interpretation of liquidity ratios - current ratios, and quick ratio; Activity ratios - Inventory Turnover ratio, and Debtor Turnover ratio; Capital structure ratios – Debt-Equity ratio, and Interest Coverage Ratio; Profitability ratios - Gross profit Ratio, Net Profit Ratio, Operating Ratio, P/E ratio, and EPs.

TEXT BOOKS:

1. Managerial Economics and Financial Analysis, Aryasri, TMH, 2009.
2. Managerial Economics, Varshney & Maheswari: Sultan Chand, 2009.

REFERENCE BOOKS:

1. Financial Accounting for Management, Ambria Gupta, Pearson Education, New Delhi, 2010.
2. Managerial Economics, H.Craig Peterson & W. Cris Lewis, PHI, 2010.

(13ITD003) ADVANCED DATA STRUCTURES THROUGH C++

Course Objectives:

1. Understand the various features object oriented programming.
2. Identify classes, objects, members of a class and their relationship needed for a specific problem.
3. To apply ADT concepts using templates.
4. Demonstrate data structure problem solutions, search and retrieval of information from text data.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Develop programs using object oriented features in C++.
2. To implement algorithms into programming code.
3. Design applications using data structures such that optimizing searching.
4. Perform text processing operations using pattern matching algorithms.

UNIT- I

C++ Class Overview, Class Definition, Objects, Class Members, Access Control, Class Scope, Constructors and destructors, parameter passing methods, Inline functions, static class members, this pointer, friend functions, dynamic memory allocation and de-allocation (new and delete), exception handling.

UNIT- II

Function Overloading, Operator Overloading, Generic Programming- Function and class templates, Inheritance basics, base and derived classes, inheritance types, base class access control, runtime polymorphism using virtual functions, abstract classes, I/O streams.

UNIT -III

Review of basic data structures, the list ADT, Stack ADT, Queue ADT, Implementation using template classes in C++. Priority Queues – Definition, ADT, Realizing a Priority Queue using Heaps, Definition, insertion, Deletion, Heap sort,

UNIT- IV

Dictionaries, linear list representation, Skip list representation, operations insertion, deletion and searching, hash table representation, hash functions, collision resolution-separate chaining, open addressing-linear probing, quadratic probing, double hashing, rehashing, extendible hashing, comparison of hashing and skip lists. Text Processing – Pattern matching algorithms-Brute Force, Knuth-Morris-Pratt algorithm, Tries – Standard tries, Compressed tries, Suffix tries.

UNIT- V

Trees-Basic Terminology, Binary tree ADT, array and linked representations, traversals, threaded binary trees, Binary Search Trees: Definition, ADT, Implementation, Operations of Searching, Insertion and Deletion. AVL Trees, Definition, Operations-Insertion and Searching. B-Trees, Definition, B-Tree of order m, insertion, deletion and searching.

Graphs: Basic terminology, representations of Graphs, Graph search methods – DFS, BFS.

TEXT BOOKS:

1. Data structures, Algorithms and Applications in C++, S.Sahni, University Press (India) Pvt.Ltd, 2nd edition, Universities Press Orient Longman Pvt. Ltd.
2. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.

(13CSE102) DIGITAL LOGIC DESIGN LABORATORY

Course Objectives:

The objectives of this course are to:

1. Introduce the concept of digital and binary systems
2. Be able to design and analyze combinational logic circuits.
3. Be able to design and analyze sequential logic circuits.
4. Understand the basic software tools for the design and implementation of digital circuits and systems.
5. Reinforce theory and techniques taught in the classroom through experiments and projects in the laboratory.

Course Outcomes:

A student who successfully fulfils the course requirements will have demonstrated:

1. An ability to operate laboratory equipment.
2. An ability to construct, analyse, and troubleshoot simple combinational and sequential circuits.
3. An ability to design and troubleshoot a simple state machine.
4. An ability to measure and record the experimental data, analyse the results, and prepare a formal laboratory report.
5. An ability to differentiate combinational and sequential circuits

EXPERIMENTS

Programming can be done by using Verilog compiler and verification by simulation with any of the front end tools.

1. HDL code to realize all the logic gates.
2. Design of 2-to -4 decoder.
3. Design of 8-to-3 encoder
4. Design of 8-to-1 Multiplexer
5. Design of 1 to 8 Demultiplexer
6. Design of comparator
7. Design of half adder and full adder.
8. Design of half subtractor and full Subtractor.
9. Design of flip flops: SR, D, JK, T.
10. Design of code converters.
11. Design of 4-bit Asynchronous counter.
12. Design of 4-bit synchronous counter

(13EEE178) ELEMENTS OF ELECTRICAL AND ELECTRONICS ENGINEERING
LABORATORY

Course Objectives:

1. To understand the basic concepts of circuit analysis
2. To analyze electrical circuits using network theorems and analysis of AC circuits
3. To learn principle of operation, construction and characteristics of various electronic devices.
4. To know about different applications of these devices

Course Outcomes:

After going through this course the student will be able to

1. To apply basic network theorems for solving DC electrical networks.
2. Analyze various Electrical networks using Kirchhoff's laws.
3. To use the electronic devices in real time applications
4. Calculate h-parameters of BJT under various configurations.

PART A:

1. Verification of KVL and KCL
2. Verification of Superposition theorem
3. Verification of Reciprocity theorem
4. Verification of Thevenin's theorem
5. Verification of Norton's theorem
6. Verification of Maximum Power Transfer Theorem

PART B:

1. Forward and Reverse Bias V-I characteristics of PN junction Diode.
2. Zener diode V-I characteristics
3. Half Wave and Full Wave rectifier without filters.
4. Characteristics of a BJT under CE configuration.
5. Characteristics of a BJT under CB configuration.
6. Frequency response of CE Amplifier.

(13ITD103) ADVANCED DATA STRUCTURES THROUGH C++ LABORATORY

Course Objectives:

1. To implement various object oriented concepts like abstraction, encapsulation, polymorphism, inheritance etc.
2. To demonstrate exception handling mechanism.
3. To implement algorithms into programming code.
4. To implement dictionaries, various data structures like stacks, queues, trees, grphs using templates.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Design applications using object oriented features.
2. Design applications using linear and non linear data structures.
3. Analyze performance of various data structures.
4. Perform text processing operations using pattern matching algorithms

TASK 1

Implementation of C++ programs using - Constructors, friend functions, Parameter passing methods, this pointer, inline functions, static members, dynamic memory allocation, exception handling.

TASK 2

Implementation of C++ programs using: Function over Loading, Operator Overloading, Function and class templates, inheritance types, runtime polymorphism using virtual functions, abstract classes, streams I/O.

TASK 3

Write C++ programs to implement the following using an array

- a) Stack ADT b) Queue ADT c) Linear list

TASK 4

Write C++ programs to implement the following using linked list

- a) Stack ADT b) Queue ADT c) Linear list

TASK 5

Write C++ programs to implement the following using an array

- a) Circular Queue ADT b) Dequeue ADT

TASK 6

Write C++ programs to implement the following using linked list

a) Circular Queue ADT b) Dequeue ADT c) Double linked list

TASK 7

Write C++ programs to implement the following on Binary search tree i) Insertions

ii) Deletions

iii) Search

TASK 8

Write C++ programs to implement Binary tree traversals (preorder, inorder, postorder)

TASK 9

Write C++ programs to implement bfs and dfs for a given graph

TASK 10

Write C++ programs to implement

a) Heap sort b) merge sort

TASK 11

Write C++ programs to implement all functions of dictionary (ADT) using hashing.

TASK 12

Write C++ programs to implement Brute Force and Knuth –Morris-Pratt pattern matching algorithm

(13CSE004) FORMAL LANGUAGES AND AUTOMATA THEORY

Course Objectives:

1. To introduce the theoretical foundations of computer science concerning– the relationships between languages and machines, the inherent limits of what can be computed, and the inherent efficiency of solving problems.
2. To determine a language's location in the Chomsky hierarchy (regular sets, context-free, context-sensitive, and recursively enumerable languages).
3. To convert among equivalently powerful notations for a language, including among DFAs, NFAs, and regular expressions, and between PDAs and CFGs.
4. To discuss the applications of theory to other areas of computer science such as algorithms, programming languages, compilers, natural language translation, operating systems, and software verification.
5. To build the foundation for students to pursue research in the areas of automata theory, formal languages, and computational power of machines

Course Outcomes:

At the end of this course the student should be able to

1. Understand the theory of automata.
2. Classify computational devices according to their computational power, and tools which will allow us to tell if a device is powerful enough to solve a given computational problem.
3. Understand the concept of the grammar and concept of programming language.
4. Understand Turing machine concept and in turn the technique applied in computers.
5. Classify P vs NP- Class problems and NP-Hard vs NP-complete problems.

UNIT-I

Fundamentals: strings, Alphabet, Language, Operations, Chomsky hierarchy of languages, Finite state machine Definitions, finite automation model, acceptance of strings and languages, DFA and NFA, transition diagrams and language recognizers. NFA with ϵ transitions –Equivalence between NFA with and without ϵ transitions, NFA to DFA conversion, minimization FSM, equivalence between two FSM's, Output machines- Moore and Mealy machine.

UNIT –II

Regular Languages : Regular Sets , Regular Expressions , identity Rules, Constructing Finite automata for a given regular expressions, Conversion of Finite automata to regular expressions, Pumping lemma of regular sets , closure properties of regular sets (proofs not required). Regular Grammars – right linear and left linear grammars, equivalence between regular grammar and FA,

UNIT –III

Context Free Grammar, derivation trees, sentential forms, right most and left most derivations of strings. Ambiguity in Context free Grammars. Minimization of Context free grammars, CNF, GNF, Pumping Lemma for Context Free Languages. Enumeration of properties of CFL (proofs omitted).

Push Down Automata- definition, model, acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence, Equivalence of CFL and PDA (proofs not required), Introduction to DCFL and DPDA.

UNIT –IV

Turing Machine: Definition, model, Design of TM, computable functions, recursively enumerable languages. Church's hypothesis, counter machine, types of Turing Machines (proofs not required)

UNIT –V

Computability Theory: Linear Bounded Automata and context sensitive languages, LR (0) grammar, decidability of problems, Universal TM, Undecidable problems about Turing Machine – Post's Correspondence Problem - The classes P and NP.

(13ECE082) DATA COMMUNICATION SYSTEMS

Course Objectives:

1. To Built an understanding of the fundamental Concepts of Analog & Digital Communications
2. To learn about Various factors influencing the design of Data Communication Systems
3. To understand details and functionality of data communication systems and Protocols
4. To learn about digital transmissions and cellular telephone systems

Course Outcomes:

After completion of the course the student must be able to:

1. Analyze factors affecting performance of data communication system
2. Implement various modulation techniques in a communication system.
3. Design different data communication systems and Data Communication Equipment.
4. Design different multiplexing techniques and 1G,2G telephone systems.

UNIT- I

INTRODUCTION TO DATA COMMUNICATIONS AND NETWORKING: Standards Organizations for Data Communications, Layered Network Architecture, Open Systems Interconnection, Data Communications Circuits, Serial and parallel Data Transmission, Data communications Circuit Arrangements, Data communications Networks, Alternate Protocol Suites.

SIGNALS, NOISE, MODULATION, AND DEMODULATION: Signal Analysis, Electrical Noise and Signal-to-Noise Ratio, Analog Modulation Systems, Information Capacity, Bits, Bit Rate, Baud, and M-ary Encoding, Digital Modulation.

UNIT- II

METALLIC CABLE TRANSMISSION MEDIA: Metallic Transmission Lines, Transverse Electromagnetic Waves, Characteristics of Electromagnetic Waves, Transmission Line Classifications, Metallic Transmission Line Types, Metallic Transmission Line Equivalent Circuit, Wave Propagation on Metallic Transmission Lines, Metallic Transmission Line Losses.

OPTICAL FIBER TRANSMISSION MEDIA: Advantages of Optical Fiber Cables, Disadvantages of Optical Fiber Cables, Electromagnetic spectrum, Optical Fiber Communications System Block Diagram, Optical Fiber construction, The Physics of Light, Velocity of Propagation, Propagation of Light Through an Optical fiber Cable,

Optical Fiber Modes and Classifications, Optical Fiber Comparison, Losses in Optical Fiber Cables, Light sources, Light Detectors, Lasers.

UNIT- III

DIGITAL TRANSMISSION: Pulse Modulation, Pulse code Modulation, Dynamic Range, Signal Voltage –to-Quantization Noise Voltage Ration, Linear Versus Nonlinear PCM Codes, Companding, PCM Line Speed, Delta Modulation PCM and Differential PCM.

MULTIPLEXING AND T CARRIERS: Time- Division Multiplexing, T1 Digital Carrier System, North American Digital Multiplexing Hierarchy, Digital Line Encoding, T Carrier systems, European Time- Division Multiplexing, Statistical Time – Division Multiplexing, Frame Synchronization, Frequency- Division Multiplexing, Wavelength- Division Multiplexing, Synchronous Optical Network

UNIT -IV

CELLULAR TELEPHONE SYSTEMS: First- Generation Analog Cellular Telephone, Personal Communications system, Second-Generation Cellular Telephone Systems, N-AMPS, Digital Cellular Telephone, Interim Standard, North American Cellular and PCS Summary, Global system for Mobile Communications, Personal Communications Satellite System.

UNIT- V

DATA COMMUNICATIONS EQUIPMENT: Digital Service Unit and Channel Service Unit, Voice- Band Data Communication Modems, Bell Systems- Compatible Voice-Band Modems, Voice- Band Modem Block Diagram, Voice- Band Modem Classifications, Asynchronous Voice-Band Modems, Synchronous Voice-Band Modems, Modem Synchronization, ITU-T Voice- Band Modem Specifications, 56K Modems, Modem Control: The AT Command Set, Cable Modems, Probability of Error and Bit Error Rate

(13ITD004)COMPUTER ORGANIZATION

Course Objectives:

1. This course is used to master the basic hardware and software issues of computer organization.
2. The students are expected to know the inner workings of processor, memory and I/O modules.
3. Understand how parallel processing is achieved using pipeline technique.
4. Ability to analyze the hardware and software issues related to computers and the interface between the two.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Develop the ability and confidence to use the fundamentals of computer organization as a tool in the engineering of digital systems.
2. An ability to identify, formulate, and solve hardware and software computer engineering problems using sound computer engineering principles
3. The students are able to work out the tradeoffs involved in designing a modern computer.
4. Design tiny digital systems.

UNIT- I

BASIC STRUCTURE OF COMPUTERS: Computer types, functional unit, basic operational concepts, bus structures, multi processors and multi computers, multi tasking. Register Transfer Language and Micro operations: Register Transfer language, Register Transfer, Arithmetic Micro operations, Logic Micro operations, Shift Micro operations, Arithmetic logic shift unit.

UNIT- II

BASIC COMPUTER ORGANIZATION AND DESIGN: Instruction Codes, Computer Registers, computer instructions – instruction Cycle, memory reference instructions, input-output and interrupt. Central Processing Unit: Stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, CISC and RISC.

UNIT- III

MICROPROGRAMMED CONTROL: Control memory, address sequencing, micro program example, design of control unit, hardwired control, micro programmed control.

THE MEMORY ORGANIZATION: Memory hierarchy, Main Memory, Cache memory, performance considerations, virtual memory, secondary storage.

UNIT- IV

COMPUTER ARITHMETIC: Addition and subtraction, multiplication algorithms, Division algorithms, floating-point arithmetic operations, Decimal arithmetic unit, Decimal arithmetic operations.

INPUT-OUTPUT ORGANIZATION: Peripheral devices, input-output interface, asynchronous data transfer, modes of transfer, priority interrupt, direct memory access.

UNIT- V

PIPELINE AND VECTOR PROCESSING: Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction pipeline, RISC pipeline Vector Processing, Array Processors.

TEXT BOOKS:

(13CSE006) DESIGN AND ANALYSIS OF ALGORITHMS

Course Objectives:

1. Design and analysis of algorithms is a basis of computer science. The objective of this course is to cover key techniques for designing and analyzing algorithms. The topics include (but not limited to) (1) divide and conquer, (2) dynamic programming, (3) greedy algorithms, (4) backtracking, (5) branch and bound, (6) time and space complexity analysis, , and (7) theory of NP.
2. Learning classic algorithms
3. How to devise correct and efficient algorithms for solving a given problem
4. How to validate/verify algorithms

Course outcomes:

Upon completion of this course, students should be able to:

1. Describe and use major algorithmic techniques (divide-and-conquer, dynamic programming, linear programming, greedy paradigm, graph algorithms) and cite problems for which each technique is suitable.
2. Evaluate and compare different algorithms using worst-, average-, and best-case analysis. Identify the complexity of problems.
3. Understand asymptotic notation, its properties and use in measuring algorithm behavior
4. Determine asymptotic expressions for the worst-case execution time and space requirements of algorithms and data structures.

UNIT -I

Introduction: Algorithm, Psuedo code for expressing algorithms, Performance Analysis-Space complexity, Time complexity, Asymptotic Notation- Big oh notation, Omega notation, Theta notation. **Disjoint Sets-** disjoint set operations, union and find algorithms, spanning trees, connected components and biconnected components.

UNIT- II

Divide and conquer: General method , applications-Binary search, Quick sort, Merge sort, Strassen's matrix multiplication. **Greedy method:** General method, applications-Job sequencing with dead lines, 0/1 knapsack problem, Minimum cost spanning trees, Single source shortest path problem, Huffman Codes.

UNIT- III

Dynamic Programming: General method, Principle of optimality, applications- Multistage graphs, Matrix chain multiplication, Optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem, Reliability design.

UNIT- IV

Backtracking: General method, applications- Recursive Permutation Generator ,N-queen problem, sum of subsets problem, Graph coloring, Hamiltonian cycles.

UNIT -V

Branch and Bound: General method, applications - Travelling sales person problem,0/1 knapsack problem- LC Branch and Bound solution, FIFO Branch and Bound solution. **NP-Hard and NP-Complete problems:** Basic concepts, non deterministic algorithms, NP - Hard and NP Complete classes, Cook's theorem.

TEXT BOOKS:

1. Fundamentals of Computer Algorithms, Ellis Horowitz, Satraj Sahni and Rajasekharam, Galgotia publications pvt. Ltd.

(13CSE005) DATABASE MANAGEMENT SYSTEMS

Course objectives:

1. To present an introduction to database management systems (DBMS) and relational data model.
2. To provide an emphasis on how to organize, maintain and retrieve information efficiently and effectively from a DBMS.
3. To introduce the concepts of transactions and transaction processing
4. To present the issues and techniques relating to concurrency and recovery in multi-user database environments

Course outcomes:

Upon completion of the course, the students are expected to:

1. Understand the fundamental concepts of database management. These concepts include aspects of database design, database languages, and database-system implementation.
2. The students will be able to design and query databases, as well as understand the internals of databases and define basic functions of DBMS & RDBMS.
3. Describe database development process and to Apply the Relational Database Model to understand the Logical and Physical aspects of the DBMS architecture.
4. Analyze database models & entity relationship models. Draw the E-R diagram for the given case study.
5. Use Structured Query Language (SQL) with complex queries.

UNIT-I

Introduction to Databases and Database Management System - Database system Applications - Advantages of DBMS over File System - Data Models – Instances and schema - View of Data - Database Languages -DDL-DML - Database Users and Administrator - Database System Structure.

UNIT-II

Database Design and ER diagrams – Attributes and Entity Sets – Relationships and Relationship Sets – Constraints - Keys - Design Issues - Entity-Relationship Diagram-Weak Entity Sets - Extended E-R Features - Database Design with ER model - Database Design for Banking Enterprise

UNIT – III

Introduction to the Relational Model – Structure of RDBMS - Integrity Constraints over Relations – Enforcing Integrity Constraints – Querying Relational Data - Relational Algebra and Calculus.

Introduction to SQL- Data Definition commands, Data Manipulation Commands, Basic Structure, Set operations Aggregate Operations - Join operations - Sub queries and correlated queries, SQL functions , views ,Triggers, Embedded SQL.

UNIT – IV

Functional Dependencies– Introduction , Basic Definitions, Trivial and Non trivial dependencies, closure of a set of dependencies, closure of attributes, irreducible set of dependencies- Schema Refinement in Database Design- Problems Caused by Redundancy – Decompositions – Problem Related to Decomposition — Lossless Join Decomposition – Dependency Preserving Decomposition - FIRST, SECOND, THIRD Normal Forms – BCNF — Multivalued Dependencies – Fourth Normal Form.

UNIT-V

Transaction concept- Transaction state- Implementation of atomicity and Durability- Concurrent executions – Serializability, Recoverability

Lock Based Protocols, Timestamp Based Protocols, Validation Based Protocols, Multiple Granularity, Dead Lock Handling – Failure Classification – Storage Structure - Recovery and Atomicity- Log Based recovery – Recovery with concurrent transactions – Checkpoints .

File Organization – Organization of records in file - Data Dictionary Storage – Indexing and Hashing – Basic Concepts , Ordered Indices,B+Tree Index files, B- tree index files – Static Hashing – Dynamic Hashing – Comparison of Indexing with Hashing.

TEXT BOOKS:

1. Database System Concepts, Silberschatz, Korth , Fifth Edition, McGraw hill (1,2,3 & 5 Units)
2. Database Management Systems, Raghuramakrishnan, Johannes Gehrke, TATA Mc Graw Hill (1,2,3 & 5 Units)
3. Introduction to Database Systems, C.J.Date, Pearson Education (4th Unit)

REFERENCE BOOKS:

1. Fundamentals of Database Systems, Elmasri Navrate Pearson Education

(13ITD005) JAVA PROGRAMMING

Course Objectives:

On completion, students will be able

1. To produce object-oriented solutions to a range of standard programming problems
2. They will be able to articulate and restructure programming objectives in the object-oriented paradigm.
3. They will be informed with regard to the fundamental concepts and principles of object-oriented programming
4. They will be able to apply these concepts in any programming language.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Design/Develop Program
2. Implement Program
3. Test Program
4. Validate Program

UNIT-I

Fundamentals of Object Oriented programming: Object oriented paradigm - Basic concepts of Object Oriented Programming - Benefits of OOP - Applications of OOP

Java Evolution: Java Features - How Java differs from C and C++ - Java and Internet - Java and World Wide Web - Web Browsers - Hardware and Software Requirements - Java Environment. Overview of Java Language: Simple Java Program - Java Program Structure - Java Tokens- Java Statements - Implementing a Java Program - Java Virtual Machine - Constants - Variables - Data types - Scope of Variables-Symbolic Constants-Type Casting and type promotions – Operators, Operator Precedence and Associativity - Control Statements – break - continue- Arrays-Multi dimensional arrays, Wrapper Classes - Simple examples.

UNIT-II

Classes: Classes and Objects - Constructors – methods - this keyword – garbage collection- finalize - Overloading methods and constructors - Access Control- Static members – nested and inner classes – command line arguments - variable length arguments.

Inheritance: Forms of inheritance – specialization, specification, construction, extension, limitation, combination, benefits and costs of inheritance. Super uses- final -

polymorphism, method overriding - dynamic method dispatch –abstract classes – exploring string class.

UNIT-III

Packages and Interfaces: Defining and accessing a package – understanding CLASSPATH – access protection importing packages – Interfaces - Defining and implementing an interface, Applying interfaces, Variables in interfaces and extended interfaces. Exploring java.lang and java.util packages.

Exception Handling-Fundamentals, usage of try, catch, multiple catch clauses, throw, throws and finally. Java Built in Exceptions and creating own exception subclasses.

UNIT - IV Multithreaded Programming: Java Thread life cycle model – Thread creation - Thread Exceptions - Thread Priority – Synchronization - Messaging - Runnable Interface - Interthread Communication - Deadlock - Suspending, Resuming and stopping threads.

I/O Streams: File – Streams – Advantages - The stream classes – Byte streams – Character streams.

Networks basics: Socket Programming - Proxy Servers - TCP/IP Sockets - Net Address - URL - Datagram's

UNIT – V

Applet Programming: How Applets differ from Applications - Applet Life Cycle - Creating an Applet - Running the Applet- Designing a Webpage - Applet Tag - Adding Applet to HTML file - More about Applet Tag - Passing parameters to Applets - Aligning the display.

Event handling: basics of event handling, Event classes, Event Listeners, delegation event model, handling mouse and keyboard events, adapter classes, AWT Class hierarchy - AWT Controls - Layout Managers and Menus, limitations of AWT, Swing, MVC architecture, components, containers, exploring swing.

TEXT BOOKS:

1. The Complete Reference Java J2SE 5th Edition, Herbert Schildt, TMH Publishing Company Ltd, NewDelhi.
2. Big Java 2nd Edition, Cay Horstmann, John Wiley and Sons

REFERENCE BOOKS:

(13CSE103) DATA BASE MANAGEMENT SYSTEMS LABORATORY

Course Objectives:

1. To provide a strong formal foundation in database concepts and a good formal foundation on the relational model of data
2. To familiarize the students with the nuances of database environments towards an information- oriented data-processing oriented framework
3. To present SQL and procedural interfaces to SQL comprehensively
4. To give an introduction to systematic database design approaches covering conceptual design, logical design and an overview of physical design
5. To present the concepts and techniques relating to query processing by SQLengines

Course outcomes:

At the end of this laboratory, the students should be able to:

1. Create, maintain and manipulate MySql Database.
2. Design and implement a database schema for a given problem-domain and Normalize a database
3. Populate and query a database using SQL DML/DDDL commands.
4. Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS
5. Programming PL/SQL including stored procedures, cursors and triggers.

Roadway Travels

"Roadway Travels" is in business since 1997 with several buses connecting different places in India. Its main office is located in Hyderabad.

The company wants to **computerize its operations** in the following areas:

- Reservations and Ticketing
- Cancellations

Reservations & Cancellation:

Reservations are directly handled by booking office. Reservations can be made 30 days in advance and tickets issued to passenger. One Passenger/person can book many tickets (to his/her family).

Cancellations are also directly handed at the booking office.

In the process of **computerization** of **Roadway Travels** you have to design and develop a Database which consists the data of Buses, Passengers, Tickets, and Reservation and

cancellation details. You should also develop query's using SQL to retrieve the data from the database.

The above process involves many steps like

1. Analyzing the problem and identifying the Entities and Relationships
2. E-R Model
3. Relational Model
4. Normalization
5. Creating the database
6. Querying.

Students are supposed to work on these steps TASK wise and finally create a complete "Database System" to Roadway Travels. Examples are given at every TASK for guidance to students.

TASK 1: E-R Model

Analyze the problem carefully and come up with the entities in it. Identify what data has to be persisted in the database. This contains the entities, attributes etc.

Identify the primary keys for all the entities. Identify the other keys like candidate keys, partial keys, if any.

Note: The student is required to submit a document by writing the Entities and Keys to the lab teacher.

TASK 2: Concept design with E-R Model

Relate the entities appropriately. Apply cardinalities for each relationship. Identify strong entities and weak entities (if any). Indicate the type of relationships (total / partial). Try to incorporate generalization, aggregation, specialization etc wherever required.

Note: The student is required to submit a document by drawing the E-R Diagram to the lab teacher.

TASK 3: Relational Model

Represent all the entities (Strong, Weak) in tabular fashion. Represent relationships in a tabular fashion. There are different ways of representing relationships as tables based on the cardinality. Represent attributes as columns in tables or as tables based on the requirement. Different types of attributes (Composite, Multi-valued, and Derived) have different way of representation.

Note: The student is required to submit a document by Represent relationships in a tabular fashion to the lab teacher.

TASK 4: Normalization

Database normalization is a technique for designing relational database tables to minimize duplication of information and, in so doing, to safeguard the database against certain types of logical or structural problems, namely data anomalies. For example, when multiple instances of a given piece of information occur in a table, the possibility exists that these instances will not be kept consistent when the data within the table is updated, leading to a loss of data

integrity. A table that is sufficiently normalized is less vulnerable to problems of this kind, because its structure reflects the basic assumptions for when multiple instances of the same information should be represented by a single instance only.

TASK 5: Practicing DDL and DML commands

Create all the normalized tables that are identified in TASK 4.

Insert data into the above tables.

TASK 6: Querying

In this TASK you are going to practice queries (along with sub queries) using ANY, ALL, IN, Exists, NOT EXISTS, UNION, INTERSECT, Constraints etc.

Practice the following Queries:

1. Display unique PNR_no of all passengers.
2. Display all the names of male passengers.
3. Display the ticket numbers and names of all the passengers.
4. Find the ticket numbers of the passengers whose name start with V and ends with 'h'.
5. Find the names of passengers whose age is between 30 and 45.
6. Display all the passengers names beginning with 'A'
7. Display the sorted list of passenger's names.

TASK 7 Querying (continued...)

You are going to practice queries using Aggregate functions (COUNT, SUM, AVG, and MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views.

8. Write a Query to display the Information present in the Passenger and cancellation tables. Hint: Use UNION Operator.
9. Display the number of days in a TASK on which the 9WO1 bus is available.
10. Find number of tickets booked for each PNR_no using GROUP BY CLAUSE. Hint: Use GROUP BY on PNR_No.
11. Find the distinct PNR numbers that are present.
12. Find the number of tickets booked by a passenger where the number of seats is greater than 1. Hint: Use GROUP BY, WHERE and HAVING CLAUSES.
13. Find the total number of cancelled seats.
14. Display the details of passengers who travelled within the last 3 months.
15. Create a view for the details of passengers who cancelled their tickets.

TASK 8: Create tables for the following schema.

Student (snum: integer, sname: string, major: string, level: string, age: integer)

Class (name: string, meets at: time, room: string, fid: integer)

Enrolled (snum: integer, cname: string)

Faculty (fid: integer, fname: string, deptid: integer)

TASK 9: Querying

1. Find the names of all Juniors (Level = JR) who are enrolled in a class taught by I. Teacher.
2. Find the age of the oldest student who is either a History major or is enrolled in a course taught by I. Teacher.
3. Find the names of all classes that either meet in room R128 or have 5 or more students enrolled.
4. Find the names of all students who are enrolled in two classes that meet at the same time.
5. Find the names of faculty members who teach in every room in which some class is taught.
6. Find the names of faculty members for whom the combined enrollment of the courses that they teach is less than 5
7. Print the Level and the average age of students for that Level, for each Level.
8. Print the Level and the average age of students for that Level, for all Levels except JR.
9. Print the Level and the average age of students for that Level, whose average age is greater than 20.
10. Find the names of students who are enrolled in the maximum number of classes.
11. Find the names of students who are not enrolled in any class.
12. Count the number of junior level students.
13. Display all the students whose names start with the letter "p".
14. Display all the teachers whose names contain letter 'a' or 'l' in their names.

TASK 10: PL/SQL Programs

1. Program to find sum of first 'n' natural no.s
2. Program to find reverse of a number
3. Insert the values of areas of a circle into a table called areas taking radius Values from 2 to 8.

TASK 11: Cursors

In this TASK you need to do the following: Declare a cursor that defines a result set. Open the cursor to establish the result set. Fetch the data into local variables as needed from the cursor, one row at a time. Close the cursor when done. Practice the following programs using cursors.

1. Write a cursor program to retrieve the details of all students using cursors (Use students table in TASK 9)

2. Write a PL/SQL block to update the level of students from JL to “junior Level” and SL to “senior Level” and insert a record in newlevel table.
3. Write a cursor program to display the details of Senior Level students.

TASK 12: Procedures

In this session you are going to learn Creation of stored procedure, Execution of procedure and modification of procedure. Practice procedures using the above database.

TASK 13: Triggers

In this TASK you are going to work on Triggers. Creation of insert trigger, delete trigger, update trigger. Practice triggers using the above database.

(13CSE104) DESIGN AND ANALYSIS OF ALGORITHMS LABORATORY

Course Objectives:

1. To analyze worst-case running time of algorithms and understand fundamental algorithmic problems.
2. To understand how asymptotic notation is used to provide a rough classification of algorithms, how a number of algorithms for fundamental problems in computer science and engineering work and compare with one another.
3. To implement the methods of designing and analyzing algorithms
4. To study about various designing paradigms of algorithms for solving real world problems.

Course Outcomes: At the end of this laboratory, the students should be able to:

1. To prove the correctness and analyze the running time of the basic algorithms for those classic problems.
2. To design algorithms using the dynamic programming, greedy method, Backtracking, Branch and Bound strategy that employ this strategy
3. To compare, contrast, and choose appropriate algorithmic design techniques to present an algorithm that solves a given problem.
4. To develop the efficient algorithms for the new problem with suitable designing techniques.

TASK 1:

1. A). WAP for Iterative and Binary Search.
B). Print all the nodes reachable from a given starting node in a digraph using BFS method.
C). Check whether a given graph is connected or not using DFS method.

TASK 2:

2. A). Sort a given set of elements using the Quicksort method. Repeat the TASK for different values of n, the elements can be read from a file or can be generated using the random number generator.
B). Sort a given set of elements using the Mergeksort method. Repeat the TASK for different values of n, the elements can be read from a file or can be generated using the random number generator.

TASK 3:

3. A). WAP for Sreassen Matrix Multiplication.

B). Implement 0/1 Knapsack problem Using Greedy Method Algorithm.

TASK 4:

4. Find Minimum cost spanning tree using Prim's & Kruskal's algorithm.

TASK 5:

5. From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.

TASK 6:

6. WAP for Huffman Coding.

TASK 7:

7. WAP for Multi Stage Graph problem to find optimal path between source and destination.

TASK 8:

8. Implement Matrix Chain Multiplication algorithm.

TASK 9:

9. WAP to find Optimal Binary Search Tree.

TASK 10:

10. Implement solution for TSP problem using Dynamic Programming Technique.

TASK 11:

11. A). Implement n-Queens problem using Backtracking.
B). WAP for Hamiltonian Cycle Problem

TASK 12:

12. Implement the solution for TSP problem using Branch & Bound technique.

(13ITD104)JAVA PROGRAMMING LABORATORY

Course Objectives:

1. Understand basic principles of object-oriented program design using Java.
2. Understand the basic and some advanced issues related to writing classes and methods such as data, visibility, scope, method parameters, object references, and nested classes.
3. Understand the basic ideas behind class hierarchies, polymorphism, and programming to interfaces.
4. Get exposure to exceptions and basic I/O streams.
5. Develop solid Java programming skills and the ability to put in practice the acquired knowledge and understanding of the Java language and object-oriented design in relatively simple case studies.

Course Outcomes (LO):

Upon completion of this course, students should be able to:

1. [Object-oriented Programming]

Be able to understand better the object-oriented approach in programming. Students should be able to analyze and design a computer program to solve real world problems based on object-oriented principles.

2. [Java Programming Language]

Be able to write computer programs to solve real world problems in Java

3. [Good Documentation Practices]

To learn and appreciate the importance and merits of proper comments in source code and API documentations

4. [GUI Programming]

Be able to write simple GUI interfaces for a computer program to interact with users, and to understand the event-based GUI handling principles.

Programs:

1. Write a java program to print all the twin primes below 1000. (A twin prime is a prime number that differs from another prime number by two. (3, 5), (5, 7), (11, 13), (17, 19), (29, 31), (41, 43), .821, 823), etc. .
2. Write a java program to implement matrix multiplication. (Take the input from keyboard).
3. Write a Java program for sorting a given list of names in ascending order.
4. The Fibonacci sequence is defined by the following rule. The first two values in the sequence are 1 and 1. Every subsequent value is the run of the two values

- preceding it. Write a Java program that uses both recursive and non recursive functions to print the nth value in the Fibonacci sequence.
5. Write a Java program that prompts the user for an integer and then prints out all prime numbers up to that integer.
 6. Write a Java program that checks whether a given string is a palindrome or not. Ex: MALAYALAM is a palindrome.
 7. Write a Java program that prints all real solutions to the quadratic equation $ax^2 + bx + c = 0$. Read in a, b, c and use the quadratic formula. If the discriminant $b^2 - 4ac$ is negative, display a message stating that there are no real solutions.
 8. Write a java program to implement constructor overloading.
 9. Write a java program to implement variable length arguments
 10. Write a java program to implement the use of inner classes.
 11. Write a java program to implement dynamic method dispatch.
 12. Write a Java program that illustrates how run time polymorphism is achieved.
 13. Write a java program that illustrates the following
 - Handling predefined exceptions
 - Handling user defined exceptions
 14. Write a java program that illustrates the following
 - Creation of simple package.
 - Accessing a package.
 - Implementing interfaces.
 15. Write a Java program for creating multiple threads
 - Using Thread class
 - Using Runnable interface
 16. Write a Java program for creating multiple threads. The main method sleeps for 10 seconds at the end of which all the threads should be terminated.
 17. Write a Java program that correctly implements producer consumer problem using the concept of inter thread communication.
 18. Write a Java program that implements a simple client/server application. The client sends data to a server. The server receives the data, uses it to produce a result, and then sends the result back to the client. The client displays the result on the console. For ex: The client sends a Celsius value, and the result produced by the server is the Fahrenheit value.
 19. Write a Java program that reads on file name from the user then displays information about whether the file exists, whether the file is readable, whether the file is writable, the contents of file and the length of the file in bytes.
 20. Write a Java program that: (Use classes and objects)
 - a) Implements stack ADT.
 - b) Converts infix expression into Prefix form.

21. Write an applet that displays a simple message.
22. Write a java program for passing parameters to applets
23. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the Digits and for the + - * % operations. Add a text field to display the result.
24. Write a Java program for handling mouse and keyboard events.
25. Write a Java program for handling menu events.

TEXT BOOKS:

1. The Complete Reference Java J2SE, 5th Edition, Herbert Schildt , TMH.
2. Core Java 2 Volume I Fundamentals, 5th Edition. Cay S.Horstmann, Gary Cornell , PHI,2000.
3. The Java Programming Language - Second Edition, K. Arnold and J. Gosling , Addison Wesley, 1996.

(13CSE007)SOFTWARE ENGINEERING

Course Objectives:

1. Understand the basic concepts and issues of software .
2. Identify Life cycle phases
3. Prepare the Requirements for a small software project
4. Understand process of Requirements Engineering and process of Design engineering
5. Recognize components of a Test Case

Course Outcomes:

Upon completion of this course, student should be able to:

1. Choose the appropriate Process model for the given project
2. Document the Requirements
3. Develop Different system Models
4. Create simple Test cases
5. Develop the skills for Software measurement and prepare RMMI plan

UNIT- I

Introduction to Software Engineering:

Changing nature of Software, Software Myths.

A Generic View of Process:-Software engineering-A layered technology, The Capability Maturity Model Integration (CMMI)

Process Models:-The water fall model, Incremental process models, evolutionary process models, the unified process.

UNIT- II

Software Requirements:

Functional and non functional requirements, User requirements, System requirements, Interface specification, the software requirements document.

Requirements Engineering Process:

Feasibility studies, requirements elicitation and analysis, requirements validation, requirements management

UNIT- III

System models: context models, behavior models, data models, object models, structured methods

Design engineering: design process and design quality, design concepts the design model

Creating an architectural design: software architecture, data design, architectural styles and patterns, architectural design

UNIT- IV

Test Strategies: A strategic approach to software testing Black box and White box Testing, Validation Testing, System Testing, Product Metrics, Software Quality, Metrics for analysis model, Metrics for design model, Metrics for source code, Metrics for testing, Metrics for maintenance Metrics for process and products Software measurement, Metrics for software quality

UNIT- V

Risk Management: Reactive vs. proactive risk strategies, Software risks, Risk identification, Risk projection Risk refinement, RMMM, RMMM plan Quality Management, Quality concepts, Software quality assurance, Software reviews, Formal technical reviews, Statistical Software Quality Assurance, Software reliability, ISO 9000 Quality standards

TEXT BOOKS:

1. Roger S.Pressman, Software engineering- A practitioner's Approach, McGraw-Hill International Edition, 5th edition, 2001.

(13ITD010)LINUX PROGRAMMING

Course Objectives:

1. Understand basic principles of Linux programming
2. To familiarize students with the Linux environment
3. To learn the fundamentals of shell scripting/programming
4. To familiarize students with basic Linux administration

Course Outcomes:

Upon completion of this course, students should be able to:

1. Understand the how to work with Linux commands
2. Understand the how to write Shell Scripts
3. Learn various System Calls in linux
4. Become familiar with Write shell scripts to automate various tasks

UNIT-I

Linux Utilities-File handling utilities, Security by file permissions, Process utilities, Disk utilities, Networking commands, Filters, Text processing utilities and Backup utilities, sed – scripts, operation, addresses, commands, applications, awk – execution, fields and records, scripts, operation, patterns, using system commands in awk.

Working with the Bourne again shell(bash): Introduction, shell responsibilities, pipes and input Redirection, output redirection, running a shell script, the shell as a programming language, shell meta characters, file name substitution, shell variables, command substitution, shell commands, the environment, quoting, test command, control structures, arithmetic in shell, shell script examples, interrupt processing, functions, debugging shell scripts.

UNIT-II

Files: File Concept, File System Structure, Inodes, File Attributes, File types, Library functions,the standard I/O and formatted I/O in C, stream errors, kernel support for files, System calls, file descriptors, low level file access – File structure related system calls(File APIs), file and record locking, file and directory management – Directory file APIs, Symbolic links & hard links.

UNIT-III

Process – Process concept, Kernel support for process, process attributes, process control - process creation, waiting for a process, process termination, zombie process, orphan process, Process APIs. **Signals–** Introduction to signals, Signal generation and handling, Kernel support for signals, Signal function, unreliable signals, reliable signals, kill, raise , alarm, pause, abort, sleep functions.

UNIT-IV

Interprocess Communication: Introduction to IPC, Pipes, and FIFOs, Introduction to three types of IPC-message queues, semaphores and shared memory. Message Queues- Kernel support for messages, UNIX system V APIs for messages, client/server example.

Semaphores-Kernel support for semaphores, UNIX system V APIs for semaphores. Shared Memory- Kernel support for shared memory, UNIX system V APIs for shared memory, semaphore and shared memory example.

UNIT-V

Sockets: Introduction to Sockets, Socket Addresses, Socket system calls for connection oriented protocol and connectionless protocol, example-client/server programs.

TEXT BOOKS:

1. Unix System Programming using C++, T.Chan, PHI.
2. Unix Concepts and Applications, 4th Edition, Sumitabha Das, TMH,2006.
3. Beginning Linux Programming, 4th Edition, N.Matthew, R.Stones,Wrox, Wiley India Edition,rp-2008

REFERENCE BOOKS:

1. Linux System Programming, Robert Love, O'Reilly, SPD.
2. Advanced Programming in the UNIX environment, 2nd Edition, W.R.Stevens, Pearson Education.
3. Unix Network Programming, W.R.Stevens, PHI.
4. Unix for programmers and users, 3rd Edition, Graham Glass, King Ables, Pearson Education.

(13ITD006)COMPUTER NETWORKS

Course Objectives:

1. Build an understanding of the fundamental concepts of computer networking.
2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.
3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Understand the Layered Architecture of Computer Networks.
2. Understand the operation of the main components of computer networks.
3. Learn various network protocols and algorithms.
4. Acquire the required skill to design simple computer networks and Become familiar with security risks threatening computer networks.

UNIT-I

DATA COMMUNICATIONS: Components – Direction of Data flow – Networks – Components and Categories – Types of Connections – Topologies –Protocols and Standards – ISO / OSI model , Example Networks such as NSF NET, ARPANET, ATM, Frame Relay, ISDN

Physical layer: Digital transmission, Multiplexing, Transmission Media, Switching, Circuit Switched Networks, Datagram Networks, Virtual Circuit Networks, Switch and Telephone Networks.

UNIT- II

Data link layer: Introduction, Framing, and Error – Detection and Correction – Parity – LRC – CRC Hamming code, Flow and Error Control, Noiseless Channels, Noisy Channels, HDLC, Point to Point Protocols.

Medium Access sub layer: ALOHA, CSMA/CD, LAN - Ethernet IEEE 802.3 - IEEE 802.4 - IEEE 802.5 - IEEE 802.11, Random access, Controlled access, Channalization, Collision Free Protocols

UNIT -III

Network layer: Logical Addressing, Internetworking, Tunneling, Address mapping, ICMP, IGMP, Forwarding, Uni-Cast Routing Protocols, Multicast Routing Protocols, Congestion Control Mechanism

UNIT-IV

Transport Layer: Process to Process Delivery, UDP and TCP protocols, SCTP, Data Traffic, Congestion, Congestion Control, QoS, Integrated Services, Differentiated Services, QoS in Switched Networks.

UNIT-V

Application Layer: Domain name space, DNS in internet, electronic mail, SMTP,, FTP, WWW, HTTP, SNMP, Network Security, Cryptography.

TEXT BOOKS:

(13CSE009)COMPILER DESIGN

Course Objectives:

1. Illustrating different phases of compilation
2. Enumerating top down and bottom up parsing techniques used in compilation process
3. Describes the steps in syntax directed translation, code generation and symbol table.
4. Learning the effectiveness of optimization.
5. Introducing code generation for generating machine code.

Course Outcomes:

After completion of this course the student will be able to:

1. Explain phases of a compiler and develop LEX programs for regular expressions.
2. Differentiate between top down parsing and bottom up parsing and develop YACC programs for LALR parsing.
3. Use syntax directed translation, intermediate code generation and symbol table for developing a compiler.
4. Reduce the code using code optimization techniques.
5. Generate the machine code to build a compiler .

UNIT-I

Overview of Compilation: Phases of Compilation – Lexical Analysis, Regular Grammar and regular expression for common programming language features, pass and Phases of translation, interpretation, bootstrapping, data structures in compilation – LEX lexical analyzer generator.

UNIT-II

Top down Parsing: Context free grammars, Top down parsing – Backtracking, LL (1), recursive descent parsing, Predictive parsing, Preprocessing steps required for predictive parsing.

Bottom up parsing: Shift Reduce parsing, LR and LALR parsing, Error recovery in parsing, handling ambiguous grammar, YACC – automatic parser generator.

UNIT-III

Semantic analysis: Intermediate forms of source Programs – abstract syntax tree, polish notation and three address codes. Attributed grammars, Syntax directed translation, Conversion of popular Programming languages language Constructs into Intermediate code forms, Type checker.

Symbol Tables: Symbol table format, organization for block structures languages, hashing, tree structures representation of scope information. Block structures and non block structure storage allocation: static, Runtime stack and heap storage allocation, storage allocation for arrays, strings and records.

UNIT-IV

Code optimization: Consideration for Optimization, Scope of Optimization, local optimization, loop optimization, frequency reduction, folding, DAG representation. Data flow analysis: Flow graph, data flow equation, global optimization, redundant sub expression elimination, Induction variable elements, Live variable analysis, Copy propagation.

UNIT-V

Object code generation: Object code forms, machine dependent code optimization, register allocation and assignment generic code generation algorithms, DAG for register allocation.

TEXTBOOKS:

1. Principles of compiler design -A.V. Aho . J.D.Ullman; Pearson Education.
2. Modern Compiler Implementation in C- Andrew N. Appel, Cambridge University Press.
3. Systems programming and operating systems – D.M Dhamdhare, 2nd edition,tata McGraw-hill publishing comp pvLtd.

(13CSE015)COMPUTER GRAPHICS AND ANIMATION

Course Objectives:

1. Analyze the various primitives pertaining to graphics
2. Employ the different kinds of 2D transformation techniques
3. Use certain techniques to view the objects.
4. understand 3D transformation and viewing
5. Know the animation design sequences.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Apply the various basic algorithms to draw the object
2. construct the 2D objects using transformations
3. Demonstrate the representations of 3D objects
4. apply the various techniques to eliminate hidden surfaces of 3D object
5. Create animation sequences of an object

UNIT- I

INTRODUCTION

Introduction: Usage of Graphics and their applications, Presentation Graphics- Computer Aided Design- Computer Art- Entertainment- Education and Training- Visualization- Image Processing- Graphical User Interfaces

Over view of Graphics systems: Video Display Devices- Raster Scan systems-random scan systems-Graphics monitors and workstations-Input devices-hard copy devices- Graphics software

Output primitives: Points and Lines-Line Drawing Algorithms- Loading the Frame buffer- Line function- Circle- Generating Algorithms- Ellipse Generating Algorithms- Other Curves- Parallel Curve Algorithms-Curve Functions-Pixel Addressing- Filled Area Primitives-Filled Area Functions- Cell Array- Character Generation

Attributes of Output Primitives: Line and Curve Attributes-Color and Gray scale levels- Area Fill Attributes- Character Attributes-Bundled Attributes- Inquiry Functions-Ant aliasing

UNIT- II

TWO DIMENSIONAL GEOMETRICALTRANSFORMATION AND VIEWING

Two dimensional geometric transformations - Matrix representations and homogeneous coordinates, composite transformations; Two dimensional viewing - viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate

transformation, Cohen -Sutherland-and Cyrus-beck line clipping algorithms,Southerland-Hodgeman polygon clipping algorithm.

UNIT- III

THREE DIMENSIONAL OBJECT REPRESENTATION

Three dimensional concepts; Three dimensional object representations - Polygon surfaces - Polygon tables - Plane equations - Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations - Bezier curves and surfaces - B-Spline curves and surfaces

UNIT- IV

THREE DIMENSIONAL GEOMETRICAL TRANSFORMATION AND VIEWING

Three dimensional geometric and modeling transformations - Translation, Rotation, Scaling, composite transformations; Three dimensional viewing - viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods: Depth buffer, scan line, Depth sorting, BSP-tree methods, Area sud-division and octree methods

UNIT- V

COMPUTER ANIMATION

Design of Animation Sequence, General computer Animation functions, Raster animation, Computer animation languages, key frame systems, motion specifications

TEXT BOOKS:

1. Donald Hearn & M. Pauline Baker, "Computer Graphics", Pearson Education, 2nd Edition, 2003
2. "Computer graphics principles &practice", second edition in c, foley, VanDam, Feiner and Hughes, Pearson Education
3. Computer Graphics Peter Shirley & Steve Marschner Indian Edition CENGAGE Learning.
4. Computer Graphics C Version by Donald Hearn & M. Pauline Baker, Pearson Education, New Delhi, 2004

(13ITD008)OPERATING SYSTEMS

Course Objectives:

1. Analyze the tradeoffs inherent in operating system design.
2. Summarize the various approaches to solving the problem of mutual exclusion in an operating system.
3. Evaluate the trade-offs in terms of memory size (main memory, cache memory, auxiliary memory) and processor speed.
4. Demonstrate disk storage strategies, file strategies and system protection and security with different crypto models.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Identify the System calls, protection and interrupts of any GOS.
2. Evaluate various Process scheduling mechanisms of any GOS in the mind
3. Write application keeping Concurrency and synchronization Semaphores/monitors, shared memory, mutual exclusion.
4. Explain main memory, disk access, file systems facilities along with protection and security issues.

UNIT I

Computer System and Operating System Overview: Overview of Computer System hardware, Operating System Objectives and functions, Evolution of operating System, Example Systems. Operating System Services, System Calls, System Programs. Process Management: Process Description, Process Control, Process States, Cooperating Processes, Inter-process Communication.

UNIT II

CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms and evaluation, Threads Overview, Threading issues.
Concurrency: Principles of Concurrency, Mutual Exclusion, Software and hardware approaches, Semaphores, Monitors, Message Passing, Classic problems of synchronization.

UNIT III

Principles of deadlock: System Model, Deadlock Characterization, Methods for handling Deadlocks, Deadlock Prevention, Deadlock avoidance, Deadlock detection, Recovery from Deadlocks, Dining philosopher's problem.

UNIT IV

Memory Management: Basic concepts, Swapping, Contiguous memory allocation, Paging, Segmentation, Virtual memory, Demand paging, Page-replacement algorithms, Thrashing.

Secondary storage structure: Disk structure; Disk scheduling, Disk management, Swap-space Management, RAID structure, Stable-storage Implementation, Tertiary-Storage Structure

I/O systems: I/O hardware, Application I/O interface, Kernel I/O subsystem, Transforming I/O request to hardware operations, STREAMS

UNIT V

File Management: File system-File concepts, Access methods, Directory structure, File system mounting, File sharing and Protection. Implementing file systems-File system structure and implementation, Directory implementation, Allocation methods, Free-space management, Efficiency and performance

Security: Security threats, Protection, Intruders, Viruses, Trusted System.

TEXT BOOKS:

1. Operating System Principles- Abraham Silberchatz, Peter B. Galvin, Greg Gagne 7th Edition, John Wiley.
2. Operating Systems - Internal and Design Principles, Stallings, Fifth Edition- 2005, Pearson education/PHI

(13ITD106)LINUX PROGRAMMING AND COMPILER DESIGN LABORATORY

Course Objectives:

1. Understand basic principles of Linux programming
2. To learn the fundamentals of shell scripting/programming
3. To provide an Understanding of the language translation peculiarities by designing complete translator for mini language.
4. To provide practical knowledge in automating the implementation of language translator.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Understand the how to write Shell Scripts
2. Learn various System Calls in linux
3. Design and implement language processors in C/C++
4. Use tools (such as LEX and YACC) to automate parts of the implementation process.

PART-A:

List of TASKs

1. Basic Linux Commands File handling utilities, Security by file permissions, Process utilities, Disk utilities, sed, awk, grep.
2. Write a shell script that accepts a file name, starting and ending line numbers as arguments and displays all the lines between the given line numbers.
3. Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.
4. Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.
5. C programming examples using Linux Operating systems.
6. Write a shell script that receives any number of file names as arguments checks if every argument supplied is a file or a directory and reports accordingly. Whenever the argument is a file, the number of lines on it is also reported.
7. Write a shell script that accepts a list of file names as its arguments, counts and reports the occurrence of each word that is present in the first argument file on other argument files.
8. Write a shell script to list all of the directory files in a directory.
9. Write a shell script to find factorial of a given integer.

10. Write an awk script to count the number of lines in a file that do not contain vowels.
11. Write an awk script to find the number of characters, words and lines in a file.
12. Implement in C the following Unix commands using System calls
a) Cat b) mv
13. Write a C program to emulate the Unix ls -l command.
14. Write a C program on zombie process
15. Write a C program that illustrates the following.
a) Creating a message queue.
b) Writing to a message queue.
c) Reading from a message queue.
16. Write a C program that illustrates file locking using semaphores.

PART-B

COMPILER DESIGN

Consider the following mini Language, a simple procedural high-level language, only operating on

integer

data, with a syntax looking vaguely like a simple C crossed with Pascal. The syntax of the language is

defined by the following BNF grammar:

```

<program> ::= <block>
<block> ::= { <variabledefinition><slist> }
| { <slist> }
<variabledefinition> ::= int <vardeflist> ;
<vardeflist> ::= <vardec> | <vardec> , <vardeflist>
<vardec> ::= <identifier> | <identifier> [ <constant> ]
<slist> ::= <statement> | <statement> ; <slist>
<statement> ::= <assignment> | <ifstatement> | <whilestatement>
| <block> | <printstatement> | <empty>
<assignment> ::= <identifier> = <expression>
| <identifier>[ <expression> ] = <expression>
<ifstatement> ::= if <bexpression> then <slist> else <slist> endif
| if<bexpression> then <slist> endif
<whilestatement> ::= while <bexpression> do <slist> enddo
<printstatement> ::= print ( <expression> )
<expression> ::= <expression><addingop><term> | <term> | <addingop><term>
<bexpression> ::= <expression><relop><expression>
<relop> ::= < | <= | == | >= | > | !=

```

```

<addingop> ::= + | -
<term> ::= <term><multop><factor> | <factor>
<multop> ::= * | /
<factor> ::= <constant> | <identifier> | <identifier> [ <expression> ]
| ( <expression> )
<constant> ::= <digit> | <digit><constant>
<identifier> ::= <identifier><letterordigit> | <letter>
<letterordigit> ::= <letter> | <digit>
<letter> ::= a|b|c|d|e|f|g|h|i|j|k||m|n|o|p|q|r|s|t|u|v|w|x|y|z
<digit> ::= 0|1|2|3|4|5|6|7|8|9

```

<empty> has the obvious meaning

Comments (zero or more characters enclosed between the standard C/Java-style comment brackets /

.../) can be inserted. The language has rudimentary support for 1-dimensional arrays.

The declaration

int a[3] declares an array of three elements, referenced as a[0], a[1] and a[2]. Note also that you should

worry about the scoping of names.

A simple program written in this language is:

```

{ int a[3],t1,t2;
t1=2;
a[0]=1; a[1]=2; a[t1]=3;
t2=-(a[2]+t1*6)/(a[2]-t1);
if t2>5 then
print(t2);
else {
int t3;
t3=99;
t2=-25;
print(-t1+t2*t3); /* this is a comment
on 2 lines */
} endif }

```

TASK 17

Design a Lexical analyzer for the above language. The lexical analyzer should ignore redundant spaces, tabs and newlines. It should also ignore comments. Although the syntax specification states that identifiers can be arbitrarily long, you may restrict the length to some reasonable value.

TASK 18

Implement the lexical analyzer using JLex, flex or lex or other lexical analyzer generating tools.

TASK 19

Design Predictive parser for the given language

Design LALR bottom up parser for the above language.

TASK 20

Convert the BNF rules into Yacc form and Write code to generate abstract syntax tree.

TASK 21

Write program to generate machine code from the abstract syntax tree generated by the parser

TASK 22

Write a Yacc Program to construct a parse tree for the given grammar

Write a Lex program to construct a lexical analyzer

(13ENG102)ADVANCED ENGLISH LANGUAGE COMMUNICATION SKILLS LABORATORY

Introduction

This course aims to offer students a practical approach to Technical Writing, and provide a relevant, contemporary and authoritative introduction to the dynamic field of technical communication that prepares them for Workplace Communication. Each unit in the syllabus is devised so as to include a writing component as well as an oral component.

Course objectives:

- i) enable the students to create clear, accurate, and succinct content to write business letters, resume, SOP, Proposals and Technical Reports for academics as well as for workplace
- ii) enable students to adjust technical content to meet the needs of a specific target audience
- iii) groom students to speak accurately and fluently and prepare them for real world activities through behavioral skills

Course Outcomes:

Students will be able to:

- i) summarize and synthesize information and produce technical writing that is required in academics as well as in the engineering profession
- ii) write covering letters, resume, SOP, Project Proposals and Technical Reports
- iii) speak fluently and address a large group of audience and participate in debates and discussions

Methodology

Written Component

A Process- Genre methodology will be used in teaching the technical genres. This method would enable students to understand the use of particular lexico-grammatical patterns required of in the context of technical writing. They would learn to use language to express the particular communicative intent that is required of in the context of writing these genres.

Syllabus Outline

Unit I

1. Applications and Covering letters
2. Resume Writing

3. Verbal Ability
4. Oral Communication: Talking about Yourself

Unit II

1. Writing an SOP
2. Summarizing and Synthesizing Information (Precis Writing)
3. Oral Communication: Making Presentations

Unit III

1. Writing Project Proposals
2. Oral Communication: Group Discussions

Unit IV

1. Writing Project Reports
2. Oral Communication: Interview Skills

Unit V

Behavioral Skills and Personality Development

1. Building a Positive Attitude, Building a Positive Personality, Motivation, Goal Setting & Values & Vision
2. Problem Solving and Decision Making; Negotiation Skills through Role Play
3. Team Building and Leadership Abilities
4. Social Etiquette

REQUIRED TEXT AND MATERIALS:

1. Ashraf Rizvi, M (2005). Effective Technical Communication, Tata Mc Graw Hill Publishing Company Limited, New Delhi.
2. Anderson, Paul V. (2003). Reports. In Paul V. Anderson's Technical Communication: A Reader-Centered Approach (5th Ed...) (pp. 457-473). Boston: Heinle.
3. William S. Pfeiffer, (2010) Technical Communication: A Practical Approach (7th ed.) Prentice Hall.

REFERENCE BOOKS:

VNR VIGNANA JYOTHI INSTITUTE OF ENGINEERING & TECHNOLOGY
III Year B.Tech IT– I SEM **L T/P/D C**
0 3 2
(13CSE105) OPERATING SYSTEMS AND COMPUTER NETWORKS
LABORATORY

Course Objectives:

1. General understanding of structure of modern computers and Operating Systems.
2. Understanding the Purpose, structure and functions of operating systems
3. Illustration of key OS functions through C programming with examples
4. Introduce the concept of computer networks and its topologies to the students
5. Involve students in analytical studies of Computer Networks through C programming.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Identifying the working methodology of multithreaded applications
2. Determining the reasons of deadlocks, and their remedial measures in an operating system.
3. Learning the management of different type of memories techniques in the computer system.
4. Knowing the management of different type of memories techniques in the computer system.
5. Analyzing why networks need security and control, what errors might occur, and how to control network errors.

OPERATING SYSTEMS LAB

1. Simulate the following CPU scheduling algorithms
 - a) Round Robin b) SJF c) FCFS d) Priority
2. Simulate the following algorithms
 - a) Best fit b) worst fit c) first fit
3. Simulate the following file allocation strategies
 - a) Sequential b) Indexed c) Linked
4. Simulate algorithms for deadlock avoidance and deadlock detection
5. Simulate the following page replacement algorithms
 - a) FIFO b) Optimal c) LRU
6. Simulate the following disk scheduling algorithms
 - a) FCFS b) SCAN c) CSCAN d) LOOK

COMPUTER NETWORKS LAB

7. Implement the data link layer framing methods such as character, character stuffing and bit stuffing.
8. Implement on a data set of characters the three CRC polynomials – CRC 12, CRC 16 and CRC CCIP.
9. Implement Dijkstra's algorithm to compute the Shortest path thru a graph.
10. Take an example subnet graph with weights indicating delay between nodes. Now obtain Routing table at each node using distance vector routing algorithm
11. Take a 64 bit plain text and encrypt the same using DES algorithm.
12. Using RSA algorithm encrypt a text data and Decrypt the same.

(13ITD009) SOFTWARE TESTING METHODOLOGIES

Course Objectives:

1. know different types of Bugs, Testing levels
2. Knowledge on Transaction flow testing alpha, beta and domain testing.
3. Logic based testing, state testing, testability tips. Good bad graphs
4. Know the concept of Graph matrices and application, test management

Course Outcomes:

Students will be able to know

1. How to apply fundamental knowledge of Testing in Real time scenarios.
2. Test a simple application.
3. Understand and Applying the Techniques in Software Development Life cycle.
4. How to create a test plan for an application

UNIT- I

Introduction: Purpose of testing-Dichotomies-Software Testing Principles- Bugs, consequences of bugs, Taxonomy of bugs -The Tester's Role in a Software Development Organization-Black box testing and white box testing- Defects -Cost of defects- Defect Classes- Defect Examples, software testing life cycle.

UNIT- II

Flow graphs and Path testing: Basics concepts of path testing-predicates-path predicates and achievable paths- path sensitizing- path instrumentation, application of path testing.

Transaction Flow Testing: Transaction flows- transaction flow testing techniques-

Dataflow testing: Basics of dataflow testing - strategies in data flow testing – application of data flow testing.

UNIT- III

Test Case Design Strategies: Using Black Box Approach to Test Case Design - Random Testing – Requirements based testing – Boundary Value Analysis – Equivalence Class Partitioning– Compatibility testing – User documentation testing – Domain testing.

Alpha, Beta Tests – Usability and Accessibility testing – Configuration testing - Compatibility testing – Testing the documentation.

UNIT- IV

Paths, Path products and Regular expressions: Path products & path expression-reduction procedure- applications- regular expressions & flow anomaly detection.

Logic Based Testing: Overview decision tables-path expressions, k-v charts.

State, state graphs and transition testing: state graphs, good and bad state graphs, state testing, testability tips

UNIT- V

Graph Matrices and applications: motivational over view, matrix of graph, relations, power of matrix, node reduction algorithm.

People and organizational issues in testing: Organization structures for testing teams – testing services - Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items – test management – test process- bug detection life cycle.

TEXT BOOKS:

1. “Software Testing – Principles and Practices”, Srinivasan Desikan and Gopaldaswamy Ramesh, Pearson education, 2006.
2. “Software Testing Techniques”, Boris Beizer, 2nd Edition, Van Nostrand Reinhold, New York, 1990

REFERENCE BOOKS:

1. “Software Testing”, Ron Patton, Second Edition, Sams Publishing, Pearson education, 2007
2. “Software Testing – Effective Methods, Tools and Techniques”, Renu Rajani, Pradeep Oak, Tata McGraw Hill, 2004.
3. “Software Testing in the Real World – Improving the Process”, Edward Kit, Pearson Education, 1995.
4. “Foundations of Software Testing – Fundamental algorithms and techniques”, Aditya P. Mathur, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008

(13CSE017)DATA WAREHOUSING AND MINING

Course Objectives:

1. To introduce the basic concepts and techniques of Data Warehousing & Mining.
2. Apply preprocessing statistical methods for any given raw data.
3. To develop skills of using recent data mining software for solving practical problems
4. Implement and apply basic algorithms for supervised and unsupervised learning
5. Explore efficient and cost effective methods for maintaining datawarehouse systems

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Apply database analysis and design techniques to the concept of Data Warehousing.
2. Construct a data model for a case sample Data Warehouse project.
3. List and describe the core components of a Data Mart.
4. Summarize the rational and key benefits of using Data Marts and Construct a data model representing a Data Mart strategy.
5. Evaluate different models used for OLAP and data preprocessing

UNIT I:

Introduction: Fundamentals of data mining, KDD process, Data Mining Functionalities, Classification of Data Mining systems, Data Mining Task primitives, Integration of a Data mining System with a Database or a Data warehouse systems, Major issues in Data Mining.

Data Preprocessing: Needs for Preprocessing the Data, Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and Concept Hierarchy Generation.

UNIT II:

Data Warehouse and OLAP Technology for Data Mining: Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, From Data Warehousing to Data Mining.

Data Cube computation and Data Generalization: Efficient Methods for Data Cube Computation, Further Development of data cube and OLAP Technology, Characterization and Discrimination: Attribute-Oriented Induction.

UNIT – III

Mining Frequent, Associations and Correlations: Basic Concepts, Frequent Item set mining methods, Mining Multilevel Association Rules from Transaction Databases, Mining Multidimensional Association Rules from Relational Databases and Data Warehouses, From Association Mining to Correlation Analysis, Constraint-Based Association Mining.

UNIT – IV

Classification and Prediction: Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, Bayesian Classification, Classification by Back propagation, Classification Based on Concepts from Association Rule Mining, Other Classification Methods, Prediction, Classifier Accuracy.

UNIT – V

Cluster Analysis Introduction: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods, Density-Based Methods, Grid-Based Methods, Model-Based Clustering Methods, Outlier Analysis.

Mining Complex Types of Data: Mining Spatial Databases, Mining Multimedia Databases, Mining Time-Series and Sequence Data, Mining Text Databases, Mining the World Wide Web.

TEXT BOOKS:

1. Data mining: Concepts and Techniques, Jiawei Han and Micheline Kamber, 2nd Edition, Elsevier, 2006.

(13CSE010)PRINCIPLES OF PROGRAMMING LANGUAGES

Course Objectives

2. Define a programming language and describe the main principles of various types of programming languages;
3. Differentiate Syntax and Semantics and explain their significance in different programming languages.
4. Name various types of Data types, Expressions and Statements
5. Describe the characteristics of programming languages like subprograms and Abstract data types critically and in a scientific manner.
6. Define Exception Handling and comparison of the principles of an imperative, functional, object oriented or logic programming language

Course Outcomes:

Upon completion of the course, the students are expected to/to be:

1. Implement the principles of various types of programming Languages.
2. Apply the syntax-related concepts including various types of grammars, parse trees, Recursive descent parsing and also Axiomatic and Denotational semantics.
3. Use various types of Data types, Expressions and Statements
4. Illustrate the language abstraction constructs of classes, interfaces, packages, procedures and sub-programs
5. Compare the implementations of imperative, object-oriented, functional and logic languages.

UNIT-I:

Preliminary Concepts: Reasons for studying, concepts of programming languages, Programming domains, Language Evaluation Criteria, influences on Language design, Language categories.

Programming Paradigms:

Imperative, Object Oriented, functional Programming, and Logic Programming. Programming Language Implementation – Compilation and Virtual Machines, programming-environments.

UNIT-II:

Syntax and Semantics: General Problem of describing Syntax and Semantics, formal methods of describing syntax - BNF, EBNF for common programming languages features, parse trees, ambiguous grammars, attribute grammars, denotational semantics and axiomatic semantics for common programming language features.

UNIT-III:

Data types: Introduction, primitive, character, user defined, array, associative, record,

union, pointer and reference types, design and implementation uses related to these types. Names, Variable, concept of binding, type checking, strong typing, type compatibility, named constants, variable-initialization.

Expressions and Statements: Arithmetic relational and Boolean expressions, Short circuit evaluation mixed mode assignment, Assignment Statements, Control Structures – Statement Level, Compound Statements, Selection, Iteration, Unconditional Statements, guarded commands.

UNIT-IV:

Subprograms and Blocks: Fundamentals of sub-programs, Scope and lifetime of variable, static and dynamic scope, Design issues of subprograms and operations, local referencing environments, parameter passing methods, overloaded sub-programs, generic sub-programs, parameters that are sub-program names, design issues for functions user defined overloaded operators,co-routines.

Abstract Data types: Abstractions and encapsulation, introductions to data abstraction, design issues, language examples, C++ parameterized ADT, object oriented programming in small talk, C++, Java, C#, Ada 95 Concurrency: Subprogram level concurrency, semaphores, monitors, message-passing,Java-threads,C#threads.

UNIT-V:

Exception handling : Exceptions, exception Propagation, Exception handler in Ada, C++ and Java.

Logic Programming Language: Introduction and overview of logic programming, basic

elements-of-prolog-,application-of-logic-programming.

Functional Programming Languages: Introduction, fundamentals of FPL, LISP, ML, Haskell, application of Functional Programming Languages and comparison of functional and imperative Languages.

TEXT BOOKS:

1. Concepts of Programming Languages Robert .W. Sebesta 6/e, Pearson Education.
2. Programming Languages –Louden, Second Edition, Thomson.

REFERENCE BOOKS:

1. Programming languages –Ghezzi, 3/e, John Wiley
2. Programming Languages Design and Implementation – Pratt and Zelkowitz, Fourth Edition PHI/Pearson Education
3. Programming languages –Watt, Wiley Dreamtech
4. LISP Patric Henry Winston and Paul Horn Pearson Education.
5. Programming in PROLOG Clocksin, Springer

(13CSE008)OBJECT ORIENTED ANALYSIS AND DESIGN

Course Objectives:

1. To understand the Unified Modeling Language principles and fundamental process pattern for object-oriented analysis and design. Learns
2. Learn how to derive analysis model from use case requirements.
3. Learn how to model event-driven state of objects and to transform analysis model into design model that is a specification for implementation.
4. Identify subsystems, interfaces and collaborations. Apply collaborations to internal subsystem design.

Course Outcomes:

Upon completion of the course, the students are expected to:

In Software development life cycle **designing** is a crucial phase and at the end of this course student will be able to

1. Analyze the requirements through Use-Case View
2. Identify all structural and behavioral concepts of the entire system
3. Develop a model using UML concepts by different types of diagrams like Use case diagram, Class Diagram, Sequence Diagram e.t.c....
4. Apply the universal process pattern to object-oriented design using UML.

....

UNIT-I

Introduction to UML: Importance of modeling, principles of modeling, object oriented modeling, conceptual model of the UML, Architecture, Software Development Life Cycle.

UNIT-II

Basic Structural Modeling: Classes, Relationships, Common mechanisms and diagrams.

Advanced Structural Modeling: Advanced classes, advanced relationships, Interfaces, Types and Roles, Packages, Common modeling techniques.

UNIT-III

Class and Object Diagrams: Terms, concepts, modeling techniques for class and object diagrams, Common modeling techniques.

Basic Behavioral Modeling-I: Interactions, Interaction diagrams, Common modeling techniques

UNIT-IV

Basic Behavioral Modeling-II: Use cases, Use case diagrams, Activity diagrams, Common modeling techniques.

Advanced Behavioral Modeling: Events and signals, state machines, processes and Threads, time and space, state chart diagrams, Common modeling techniques.

UNIT-V

Architectural Modeling: Component, Deployment, Component diagrams, Deployment diagrams, Common modeling techniques.

Case Studies

TEXT BOOKS

1. Grady Booch, James Rumbaugh, Ivar Jacobson: The Unified Modeling Language User Guide, Pearson Education.
2. Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado: UML 2 Toolkit, WILEY-Dreamtech India Pvt. Ltd.

(13ECE084)MICROPROCESSORS AND INTERFACING

Course Objectives:

1. To become familiar with various types of microprocessors and their programming.
2. To understand interfacing circuits necessary for various applications..
3. To learn various interfacing concepts.
4. To learn basic concepts of 80851 microcontroller.

Course Outcomes:

After going through this course the student will be able to

1. Gain extensive knowledge of various microprocessor and interfacing techniques.
2. Apply the programming techniques in developing the assembly language program for microprocessor applications.
3. Integration of hardware and software components.
4. Development of microprocessor and microcontroller based systems for embedded applications.

UNIT I

General definitions of mini computers, Microprocessors, Micro controllers, and Digital Signal Processors. Introduction to 8085 Microprocessor, Architecture of 8086 Microprocessor, Addressing modes of 8086, Instruction set of 8086.

UNIT II

Assembler directives, simple assembly language programs, procedures, and macros. Pin diagram of 8086-Minimum mode and maximum mode of operation, Memory and I/O organization of 8086.

UNIT III

8255 PPI – various modes of operation and interfacing to 8086, D/A and A/D converter to 8086 using 8255, memory interfacing to 8086.

UNIT IV

Serial Communication standards, serial data transfer schemes, 8251 USART architecture and interfacing, RS-232, IEEE 488 standards. Interrupt structure of 8086, Interrupt Vector Table, Need for 8259 Programmable Interrupt Controller.

UNIT V

Introduction to Microcontrollers, 8051 Microcontroller Architecture, I/O ports, memory organization, counters and Timers, Serial data Input/Output, Interrupts. Addressing modes, Instruction set of 8051, Simple programs.

TEXT BOOKS:

1. Microprocessors and interfacing – Douglas V. Hall, TMH, 2nd Edition, 1999.
2. The 8051 microcontrollers and embedded systems- Mazidi and mazidi, PHI, 2000.

(13ITD011)GREEN IT

Course Objectives:

1. Learn concepts of Trends and which has led to go green.
2. Identify and implement environmentally sound techniques to preserve power.
3. To analyze different techniques and technologies that will enhance Green IT initiatives and to create Data centre Design & Redesign
4. To understand the purpose and application of virtualization technology.
5. To Know about Data Replication methods and Disk Technology Advancements.

Course Outcomes:

Upon completion of this course, students should be able to:

1. To Know the global green mantra is “Reduce, Reuse, Recycle.”.
2. To illustrate the importance of managing the E-waste.
3. To know how to Minimizing Power Issues, Cooling, Changing the way we work.
4. Understand concepts of Greening Process to redesign green Datacentre.
5. To recognize the need for virtual server implementation & desktop virtualization and understand about Data Replication and Disk Technology Advancements

Unit -I

Trends and Reasons to Go Green:

Overview and Issues, Problems, Cost savings, Current Initiatives and standards, Global Initiatives

Unit- II

Consumption Issues

Minimizing Power Issues, Cooling, Changing the way we work, Going Paper less, Recycling, Hardware Considerations,

Unit- III

The Greening Process

Data Center Design and Redesign, Greening your Information Systems, Staying Green

Unit- IV

Virtualization

Virtual Server Implementation Plan, Desktop Virtualization, Benefits, Desktop access, Virtual Printing,

Unit -V

Data Replication and Disk Technology Advancements

Data Replication Methods, Disk Technology Advancements, The Green data Center, Cloud Computing, Remote Monitoring

TEXT BOOKS:

1. Green IT-Reduce your information system's Environmental Impact while adding to the bottom line Toby J Velte, Anthony T Velte, Robert Elsenpeter – McGrahill Publications, 2008
2. Foundation Of Green It, Consolidation, Virtualization, Efficiency, and Roi in the Data Center, Marty Poniatowski- Prentice Hall Publications

(13CED037)DISASTER MANAGEMENT

Course Objectives:

1. Understand the difference between a hazard and disaster
2. Know about various disasters and their impacts
3. Understand Different approaches of disaster risk reduction
4. Understand Disaster risks in India

Course Outcomes:

On successful completion of this course, it is expected that students should be able to

1. Acquire the knowledge disaster Management
2. Understand the vulnerability of ecosystem and infrastructure due to a disaster
3. Acquire the knowledge of Disaster Management Phases
4. Understand the hazard and vulnerability profile of India

UNIT-I: Introduction to disaster

Concepts and definitions (Disaster, Hazard, Vulnerability, Resilience, Risks)

UNIT-II: Disasters: Classifications, Causes, Impacts (including social, economic, political, environment, health, psychosocial, etc.)

Differential impacts-in terms of caste, class, gender, age, location, disability Global trends in disasters. Urban disaster, pandemics, complex emergencies, Climate change

UNIT-III: Approaches to disaster Risk reduction

Disaster cycle-its analysis, phase, Culture of safety, prevention, mitigation and preparedness, community based DRR, Structural measures, roles and responsibilities of community. Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), states, center and other stake-holders.

UNIT-IV: Inter-relationship between Disaster and Development

Factors affecting Vulnerabilities, differential impacts, impact of development projects such as dams, embankments, change in land-use etc. Climate change Adaption. Relevance of indigenous knowledge, appropriate technology and local resources.

UNIT-V: Disaster Risk Management in India

Hazard and vulnerability profile of India

Components of Disaster relief: Water, food, sanitation, shelter, health, waste management Institutional arrangements (Mitigation, Response and Preparedness, DM Act Policy, Other related polices, plan, programmes and legislation)

Project Work :(Field Work, Case Studies)

The project/fieldwork is meant for students to understand vulnerabilities and to work on reducing disaster risks and to build a culture of safety. Projects must be conceived creatively based on the geographic location and hazard.

Open Elective (13CSE016)INTELLECTUAL PROPERTY RIGHTS

Course Objectives:

1. To make students familiar about the different intellectual property rights; copyright, patents, trademarks, trade dress, designs and know-how the different levels of intellectual property strategy.
2. To analyze the appropriate intellectual property strategy in a given market.
3. To understand innovations in engineering and other domains.
4. To know the issues and challenges involved with intellectual property valuation and the strategic requirements of intellectual property transactions
5. To be familiar with patents, copyrights and various acts related to innovations.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Define and identify various terms related to IPRs, obtain, use and protect the various IPRs in a business environment to form an appropriate IP strategy for the relevant market
2. To analyze the situation of IPR in the Indian context with that of global scenario and understand the patenting process through various case studies.
3. Identify and explain the tasks and significance of an IP manager and demonstrate competence in critical reasoning, problem solving and decision making
4. Demonstrate a deep understanding of the language of IP law and how to make the best use of legal professionals involved in IPRs
5. Demonstrate a critical understanding of the issues involved in and choose appropriate methods for extracting value from an organizations IPR (licensing, joint venture, borrowing, raising capital etc.)..

UNIT-I

Introduction – Invention and Creativity – Intellectual Property (IP) – Importance – Protection of IPR – Basic types of property i. Movable Property ii. Immovable Property and iii. Intellectual Property.

UNIT-II

IP – Patents – Copyrights and related rights – Trade Marks and rights arising from Trademark registration – Definitions – Industrial Designs and Integrated circuits –

Protection of Geographical Indications at national and International levels – Application Procedures..

UNIT-III

International convention relating to Intellectual Property – Establishment of WIPO – Mission and Activities – History – General Agreement on Trade and Tariff (GATT).

UNIT-IV

Indian Position Vs WTO and Strategies – Indian IPR legislations – commitments to WTO-Patent Ordinance and the Bill – Draft of a national Intellectual Property Policy – Present against unfair competition.

UNIT-V

Case Studies on – Patents (Basumati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

(13EEE015)RENEWABLE ENERGY SOURCES

Course Objectives:

1. To inculcate the awareness of energy conservation in students
2. To understand the use of renewable energy sources for electrical power generation
3. To know different energy storage methods
4. To learn about environmental effects of energy conversion

Course Outcomes:

Upon the completion of this subject, the student will be able

1. To use different renewable energy sources to produce electrical power
2. To minimize the use of conventional energy sources to produce electrical energy
3. To identify the fact that the conventional energy resources are depleted
4. To store energy and to avoid the environmental pollution

UNIT- I

PRINCIPLES OF SOLAR RADIATION

Role and Potential of New and Renewable source, the solar energy option, Environmental impact of solar power, Physics of the Sun, The solar constant, Extraterrestrial and Terrestrial solar radiation, Solar radiation on tilted surface, Instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT- II

SOLAR ENERGY COLLECTION & APPLICATIONS

Flat Plate Collectors and Concentrating Collectors, Classification of concentrating collectors, Orientation and Thermal analysis, advanced collectors, Solar ponds, Solar Energy Applications - solar heating/cooling techniques, solar distillation and drying, Photovoltaic Energy Conversion.

UNIT- III

WIND ENERGY

Sources and potentials, Horizontal and Vertical axis wind mills - Types, Blade Design, Performance characteristics, Betz criteria, Induction Generators for Wind power Generation, MHD Generation.

UNIT - IV

BIO-MASS & DEC

Principles of Bio-Conversion, Anaerobic/aerobic digestion, Types of Bio-gas Digesters, gas yield, Combustion characteristics of bio-gas, Utilization for cooking, Economic aspects.

Direct Energy Conversion, Need for DEC, Principles of DEC, Carnot Cycle and Limitations.

UNIT - V

HARNESSING GEOTHERMAL ENERGY & OCEAN ENERGY

Resources of Geothermal Energy, Types of wells, Methods of harnessing the energy, potential in India, Ocean Thermal Energy Conversion, Principles, Utilization, Setting of OTEC plants, Thermodynamic cycles, Tidal and Wave energy: Potential and Conversion Techniques, Mini-Hydel Power plants.

TEXT BOOKS:

1. Non-Conventional Energy Sources by G.D.Rai, Khanna Publishers.
2. Renewable Energy Resources by Twidell and Wier, CRC Press (Taylor and Francis).
3. Non- Conventional energy resources by B.H.Khan, Tata Mc Graw-Hill, 2006.

REFERENCE BOOKS:

Open Elective

3 0 3

(13AED010)MODERN AUTOMOBILE TECHNOLOGIES

Course Prerequisites: Physics, Basic Electrical Engineering.

Course Objectives:

1. Understand the basics of Automobile Engineering without any previous knowledge regarding Automobiles.
2. Understand the difference between IC engine Vehicle and HEV/EV.
3. Appreciate the current technologies in the Automobile industry

Course Outcomes:

Student should be able to

1. Apply fundamental knowledge of Automobile Engineering for design of Safety systems like AIRBAGS,ABS etc.,.
2. Apply fundamental knowledge of Automobile Engineering for design of Comfort systems like Power steering, Collapsible and tiltable steering column, and power windows. etc.,.
3. Gain the knowledge of HEV/EVs and their trouble shooting.

UNIT-I:

INTRODUCTION:

Basic layout of an automobile with reference to power plant, power required for propulsion, various resistances to motion of the automobile, Types of tyres, Basic steering systems, Brakes, Necessity of brake, Two and Three wheelers: Classification of two and three wheelers.

UNIT-II:

ELECTRIC VEHICLES:

Layout of an electric vehicle, performance of electric vehicles – traction motor characteristics, tractive effort, transmission requirements.

UNIT-III:

HYBRID VEHICLES:

Concepts of hybrid electric drive train, types, architecture of series and parallel hybrid electric drive train, merits and demerits, series and parallel hybrid electric drive train design.

UNIT-IV:

SAFETY SYSTEMS:

Airbags, seat belt tightening system, collision warning systems, child lock, anti - lock braking systems, anti - spin regulation, traction control systems.

TELEMATICS:

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition, driver assistance systems.

UNIT-V:**SECURITY SYSTEMS:**

Anti theft technologies, smart card system, number plate coding.

COMFORT SYSTEMS:

Active suspension systems, requirement and characteristics, different types, power steering, collapsible and tiltable steering column, power windows.

TEXT BOOKS:

1. "Modern Electric, Hybrid Electric and Fuel Cell Vehicles Fundamentals, Theory and Design", Mehrdad Ehsani, Yimin Gao, sebastien E. Gay and Ali Emadi: CRS Press, 2004.

(13ITD105)OBJECT ORIENTED ANALYSIS and DESIGN AND SOFTWARE TESTING LABORATORY

Course Objectives:

1. To learn basic OO analysis and design skills through an elaborate case study
2. To use the case studies to draw the UML diagrams
3. Using the identified scenarios find the interaction between objects and represent them using UML Interaction diagrams.
4. Finding the bugs and fixing the bugs
5. Knowledge on test management and test plan document
6. Know how to test a webpage and server and to know the concept of test Management tool

Course Outcomes:

1. To understand the real time case studies and develop UML diagrams like class ,use case, interaction, activity, state chart, component & deployment diagrams using concepts.
2. To develop a design diagrams for their mini project.
3. Apply fundamental knowledge of Testing in Real time scenarios.
4. Test a webpage and server.
5. Understand and Applying the Techniques in Software Development Life cycle.

SYLLABUS

PART I:

The student should take up the case study of unified Library application as mentioned in the theory and model it in different views i:e Use case view, Logical view, Component view, Deployment view, Database Design, Forward & Reverse engineering and generation of documentation of the project

PART II:

Students are asked to draw the following diagrams using UML for an ATM system whose description is given below.

UML diagrams to be developed are:

1. Use Case Diagram.
2. Class Diagram.

3. Sequence Diagram.
4. Collaboration Diagram.
5. State Diagram
6. Activity Diagram.
7. Component Diagram
8. Deployment Diagram.
9. Test Design.

Description for an ATM System

The software to be designed will control a simulated automated teller machine (ATM) having a magnetic stripe reader for reading an ATM card, a customer console (keyboard and display) for interaction with the customer, a slot for depositing envelopes, a dispenser for cash (in multiples of Rs. 100, Rs. 500 and Rs. 1000), a printer for printing customer receipts, and a key-operated switch to allow an operator to start or stop the machine. The ATM will communicate with the bank's computer over an appropriate communication link. (The software on the latter is not part of the requirements for this problem.)

The ATM will service one customer at a time. A customer will be required to insert an ATM card and enter a personal identification number (PIN) - both of which will be sent to the bank for validation as part of each transaction. The customer will then be able to perform one or more transactions. The card will be retained in the machine until the customer indicates that he/she desires no further transactions, at which point it will be returned - except as noted below.

The ATM must be able to provide the following services to the customer:

1. A customer must be able to make a cash withdrawal from any suitable account linked to the card, in multiples of Rs. 100 or Rs. 500 or Rs. 1000. Approval must be obtained from the bank before cash is dispensed.
2. A customer must be able to make a deposit to any account linked to the card, consisting of cash and/or checks in an envelope. The customer will enter the amount of the deposit into the ATM, subject to manual verification when the envelope is removed from the machine by an operator. Approval must be obtained from the bank before physically accepting the envelope.
3. A customer must be able to make a transfer of money between any two accounts linked to the card.
4. A customer must be able to make a balance inquiry of any account linked to the card.
5. A customer must be able to abort a transaction in progress by pressing the Cancel key instead of responding to a request from the machine.

The ATM will communicate each transaction to the bank and obtain verification that it was allowed by the bank. Ordinarily, a transaction will be considered

complete by the bank once it has been approved. In the case of a deposit, a second message will be sent to the bank indicating that the customer has deposited the envelope. (If the customer fails to deposit the envelope within the timeout period, or presses cancel instead, no second message will be sent to the bank and the deposit will not be credited to the customer.)

If the bank determines that the customer's PIN is invalid, the customer will be required to re-enter the PIN before a transaction can proceed. If the customer is unable to successfully enter the PIN after three tries, the card will be permanently retained by the machine, and the customer will have to contact the bank to get it back.

If a transaction fails for any reason other than an invalid PIN, the ATM will display an explanation of the problem, and will then ask the customer whether he/she wants to do another transaction.

The ATM will provide the customer with a printed receipt for each successful transaction

The ATM will have a key-operated switch that will allow an operator to start and stop the servicing of customers. After turning the switch to the "on" position, the operator will be required to verify and enter the total cash on hand. The machine can only be turned off when it is not servicing a customer. When the switch is moved to the "off" position, the machine will shut down, so that the operator may remove deposit envelopes and reload the machine with cash, blank receipts, etc.

SOFTWARE TESTING LABORATORY

Software Testing Lab

List of Experiments:

1. Write programs in „C“ Language to demonstrate the working of the following constructs:
i) do...while ii) while....do iii) if...else iv) switch v) for
2. “A program written in „C“ language for Matrix Multiplication fails” Introspect the causes for its failure and write down the possible reasons for its failure.
3. Take any system (e.g. ATM system) and study its system specifications and report the various bugs.
4. Create a test plan document for any application (e.g. Library Management System)
5. Study of Win Runner/QTP for functional testing.
6. Study of Load Runner for Load/Stress testing
7. Testing the performance of a webpage
8. Testing the performance of a Database Server
9. Study of any test management tool (e.g. Test Director)

10. Study of any open source-testing tool (e.g. Test Link)

TEXT BOOKS:

(13CSE108)DATA WAREHOUSING AND MINING LABORATORY

Course Objectives:

1. To introduce students to the basic concepts and techniques of Data Mining.
2. Performing data preprocessing tasks for data mining in Weka
3. To perform classification on data sets using the Weka machine learning toolkit
4. Implement and apply basic algorithms for supervised and unsupervised learning.
5. To develop skills of using recent data mining software for solving practical problems.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. At the end of the semester, successful students will have fundamental understanding of data mining algorithms and their applications.
2. Consequently they will have necessary skills to effectively apply data mining techniques to solve real business problems.
3. Apply preprocessing statistical methods for any given raw data.
4. Evaluate the performance of different data mining algorithms.

Analyze the results generated to determine if patterns of clusters were detected in the data sets.

DMDW Lab Experiments:

1. Introduction to the Weka machine learning toolkit – Part 1
2. Introduction to the Weka machine learning toolkit – Part 2
3. Classification using the Weka toolkit
4. Performing data preprocessing for data mining in Weka
5. Performing clustering in Weka
6. Association rule analysis in Weka

TASK 7:

Title

Introduction to the Weka machine learning toolkit

Aim

To learn to use the Weak machine learning toolkit

Requirements

How do you load Weka?

1. What options are available on main panel?

2. What is the purpose of the the following in Weka:
 1. The Explorer
 2. The Knowledge Flow interface
 3. The TASKer
 4. The command-line interface
3. Describe the **arff**file format.
4. Press the Explorer button on the main panel and load the weather dataset and answer the following questions
 1. How many instances are there in the dataset?
 2. State the names of the attributes along with their types and values.
 3. What is the class attribute?
 4. In the histogram on the bottom-right, which attributes are plotted on the X,Y-Axes? How do you change the attributes plotted on the X,Y-axes?
 5. How will you determine how many instances of each class are present in the data?
 6. What happens with the Visualize All button is pressed?
 7. How will you view the instances in the dataset? How will you save the changes?

TASK 8:

1. What is the purpose of the following in the Explorer Panel?
 1. The Preprocess panel
 1. What are the main sections of the Preprocess panel?
 2. What are the primary sources of data in Weka?
 2. The Classify panel
 3. The Cluster panel
 4. The Associate panel
 5. The Select Attributes panel
 6. The Visualize panel.
2. Load the weather dataset and perform the following tasks:
 1. Use the unsupervised filter Remove With Values to remove all instances where the attribute 'humidity' has the value 'high'?
 2. Undo the effect of the filter.
 3. Answer the following questions:
 1. What is meant by filtering in Weka?
 2. Which panel is used for filtering a dataset?
 3. What are the two main types of filters in Weka?
 4. What is the difference between the two types of filters? What is the difference between and attribute filter and an instance filter?

3. Load the iris dataset and perform the following tasks:
 1. Press the Visualize tab to view the Visualizer panel.
 2. What is the purpose of the Visualizer?
 3. Select one panel in the Visualizer and TASK with the buttons on the panel.

TASK 9:

Title

Classification using the Weka toolkit

Aim

To perform classification on data sets using the Weka machine learning toolkit

Requirements

1. Load the 'weather.nominal.arff' dataset into Weka and run Id3 classification algorithm. Answer the following questions
 1. List the attributes of the given relation along with the type details
 2. Create a table of the weather.nominal.arff data
 3. Study the classifier output and answer the following questions
 1. Draw the decision tree generated by the classifier
 2. Compute the entropy values for each of the attributes
 3. What is the relationship between the attribute entropy values and the nodes of the decision tree?
 4. Draw the confusion matrix? What information does the confusion matrix provide?
 5. Describe the following quantities:

1. TP Rate	2. FP Rate
3. Precision	4. Recall

TASK 10:

Title

Performing data preprocessing tasks for data mining in Weka

Aim

To learn how to use various data preprocessing methods as a part of the data mining

Requirements

Application of Discretization Filters

1. Perform the following tasks
 1. Load the 'sick.arff' dataset
 2. How many instances does this dataset have?
 3. How many attributes does it have?
 4. Which is the class attribute and what are the characteristics of this attribute?
 5. How many attributes is numeric? What are the attribute indexes of the numeric attributes?
 6. Apply the Naive Bayes classifier. What is the accuracy of the classifier?
2. Perform the following tasks:

1. Load the 'sick.arff' dataset.
2. Apply the supervised discretization filter.
3. What is the effect of this filter on the attributes?
4. How many distinct ranges have been created for each attribute?
5. Undo the filter applied in the previous step.
6. Apply the unsupervised discretization filter. Do this twice:
 1. In this step, set 'bins'=5
 2. In this step, set 'bins'=10
 3. What is the effect of the unsupervised filter filter on the dataset?
7. Run the the Naive Bayes classifier after apply the following filters
 1. Unsupervised discretized with 'bins'=5
 2. Unsupervised discretized with 'bins'=10
 3. Unsupervised discretized with 'bins'=20.
8. Compare the accuracy of the following cases
 1. Naive Bayes without discretization filters
 2. Naive Bayes with a supervised discretization filter
 3. Naive Bayes with an unsupervised discretization filter with different values for the 'bins' attributes.

TASK 11:

Title

Performing clustering using the data mining toolkit

Aim

To learn to use clustering techniques

Requirements

1. Perform the following tasks:
 1. Load the 'bank.arff' data set in Weka.
 2. Write down the following details regarding the attributes:
 1. names
 2. types
 3. values.
 3. Run the Simple K-Means clustering algorithm on the dataset
 1. How many clusters are created?
 2. What are the number of instances and percentage figures in each cluster?
 3. What is the number of iterations that were required?
 4. What is the sum of squared errors? What does it represent?
 5. Tabulate the characteristics of the centroid of each cluster.
 6. Visualize the results of this clustering (let the X-axis represent the cluster **name, and the Y-axis represent the instance number**)
1. Is there a significant variation in age between clusters?

2. Which clusters are predominated by males and which clusters are predominated by females?
3. What can be said about the values of the region attribute in each cluster?
4. What can be said about the variation of income between clusters?
5. Which clusters are dominated by married people and which clusters are dominated by unmarried people?
6. How do the clusters differ with respect to the number of children?
7. Which cluster has the highest number of people with cars?
8. Which clusters are predominated by people with savings accounts?
9. What can be said about the variation of current accounts between clusters?
10. Which clusters comprise mostly of people who buy the PEP product and which ones are comprised of people who do not buy the PEP product?
4. Run the SimpleKMeans algorithm for values of K (no. of clusters) ranging from 1 to 12. Tabulate the sum of squared errors for each run. What do you observe about the trend of the sum of squared errors?
5. For the run with K=12, answer the following questions:
 1. Is there a significant variation in age between clusters?
 2. Which clusters are predominated by males and which clusters are predominated by females?
 3. How do the clusters differ with respect to the number of children?
 4. Which clusters comprise of people who buy the PEP product and which ones are comprised of people who do not buy the PEP product?
 5. Do you see any differences in your ability to evaluate the characteristics of clusters generated for K=6 versus K=12? Why does this difference arise?

TASK 12:

Title

Using Weka to determine Association rules

Aim

To learn to use Association algorithms on datasets

Requirements

1. Perform the following tasks
 1. Define the following terms
 1. item and item set
 2. Association
 3. Association rule
 4. Support of an association rule
 5. Confidence of an association rule
 6. Large item set
 7. Association rule problem

2. What is the purpose of the Apriori Algorithm
2. Perform the following tasks:
 1. Load the 'vote.arff' dataset
 2. Apply the Apriori association rule
 3. What is the support threshold used? What is the confidence threshold used?
 4. Write down the top 6 rules along with the support and confidence values.
 5. What does the figure to the left of the arrow in the association rule represent?
 6. What does the figure to the right of the arrow in the association rule represent?
 7. For rule 8, verify that numerical values used for computation of support and confidence is

In accordance with the data by using the Preprocess panel. Then compute the support and confidence values. Are they above the threshold values?

3. Perform the following tasks:
 1. Load the dataset 'weather.nominal.arff'.
 2. Apply the Apriori association rule
 1. Consider the rule "temperature=hot ==> humidity=normal." Compute the support and confidence for this rule.
 2. Consider the rule "temperature=hot humidity=high ==> windy=TRUE." Consider the support and confidence for this rule.
 3. Is it possible to have a rule like the following rule:
"outlook=sunny temperature=cool" ==> humidity=normal play=yes
4. Perform the following tasks:
 1. Load the bank-data.csv file.
 2. Apply the Apriori association rule algorithm. What is the result? Why?
 3. Apply the supervised discretization filter to the age and income attributes.
 4. Run the Apriori rule algorithm
 5. List the rules that were generated.

(13ECE178)MICROPROCESSORS AND INTERFACING LABORATORY

Course Objectives:

1. To learn fundamental programming skills in Assembly language.
2. To program 8086 processor to perform various tasks.
3. To interface various devices to 8086 processor.
4. To design and implement simple microprocessor based embedded systems.

Course Outcomes:

After going through this course the student will be able to

1. To design a system component or process to meet desired needs.
2. To use techniques, skills and modern engineering tools.
3. To program microprocessor/microcontroller based systems using Assembly language.
4. To implement a working prototype of their project.

I. Microprocessor 8086

1. Introduction to MASM
2. Arithmetic operations – Multi byte addition and subtraction, multiplication and division-signed and unsigned arithmetic operation, ASCII-arithmetic operation.
3. Logical operations- Shift and rotate- converting packed BCD to unpacked BCD, BCD to ASCII conversion.
4. By using string operation and instruction prefix: block transfer, reverse string, sorting, inserting, deleting, length of the string, string comparison.
5. DOS programming: Reading keyboard (Buffered with and without echo)- Display characters, strings.

II. Interfacing

6. Interface DAC with 8086 to generate square wave using PPI
7. Interface DAC with 8086 to generate sinusoidal wave using PPI
8. Interface DAC with 8086 to generate triangular wave using PPI
9. Interface DAC with 8086 to generate stair case wave using PPI
10. Convert analog data to digital data using ADC through 8255 PPI.
11. Parallel communication between two 8086 microprocessors.
12. Interface an 8086 microprocessor trainer kit to PC and establish a communication between them through RS 232.

(13ITD012)WEB TECHNOLOGIES

Course Objectives:

The main objectives are summarized as shown below:

1. Giving the students the insights of the Internet programming and how to design and implement complete applications over the web.
2. It covers the notions of Web servers and Web Application Servers, Design Methodologies with concentration on Object-Oriented concepts, Client-Side
3. Programming, Server-Side Programming, Active Server Pages, Database Connectivity to web applications, Adding Dynamic content to web applications,
4. It also concentrates on the usage of recent platforms used in developing web applications such as the .Net environment like C#, XML, and ASP.Net.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Analyze a web page and identify its elements and attributes, Create web pages using XHTML and Cascading Styles sheets.
2. Build dynamic web pages using JavaScript (client side programming) .
3. Create XML documents, XML Schema.
4. Build and consume web services.

UNIT-I

HTML Common tags: List, Tables, images, forms, Frames; Cascading Style sheets. Introduction to Java Scripts, Objects in Java Script, Dynamic HTML with Java Script.

UNIT-II

Introduction to XML: Document type definition, XML Schemas, Document Object model, Presenting XML, Using XML **Processors:** DOM and SAX.

Java Beans: Introduction to Java Beans, Advantages of Java Beans, JDK Introspection, Using Bound properties, Bean Info Interface, Constrained properties Persistence, Customizes, Java Beans API, Introduction to EJB's.

UNIT-III

Web Servers and Servlets: Tomcat web server, Installing the Java Software Development Kit, Tomcat Server & Testing Tomcat, Introduction to Servlets: Lifecycle

of a Servlet, JSDK, The Servlet API, The javax.servelet Package, Reading Servlet parameters, Reading Initialization parameters. The javax.servelet HTTP package, Handling Http Request & Responses, Using Cookies-Session Tracking, Security Issues.

UNIT-IV

Database Access: Database Programming using JDBC, JDBC drivers, Studying Javax.sql.* package, Accessing a Database from a Servlet.

Introduction to JSP: The Problem with Servlet. The Anatomy of a JSP Page, JSP Processing. JSP Application Design with MVC Setting Up and JSP Environment.

UNIT-V

JSP Application Development: Generating Dynamic Content, Using Scripting Elements Implicit JSP Objects, Conditional Processing : Displaying Values Using an Expression to Set an Attribute, Declaring Variables and Methods Error Handling and Debugging Sharing Data Between JSP pages, Requests, and Users Passing Control and Data between Pages – Sharing Session and Application Data – Memory Usage Considerations, Accessing a Database from a JSP page, Deploying JAVA Beans in a JSP Page, Introduction to struts framework.

TEXT BOOKS:

1. Web Programming, building internet applications, Chris Bates 2nd edition, WILEY Dreamtech (UNIT s 1, 2)

(13CMS002)MANAGEMENT SCIENCE

Course Prerequisites: Business Economics and Financial Analysis

Course Objectives:

The objective of this course is to:

1. Understand the principles, functions, theories and practices of different management areas and to provide them with practical exposure to cases of success/failure in business.
2. Expose with a systematic and critical understanding of organizational theory, structures and design.
3. Comprehend conceptual models of strategic management and to familiarize with the tools of operations and project management.
4. Understand the role of human relations in the management of operations and to provide basic insights into contemporary management practices.

Course Outcomes:

Upon completion of this course students should be able to:

1. Function effectively in multidisciplinary teams to accomplish a common goal of organizations.
2. Apply theories to improve the practice of management.
3. Appreciate the management challenges associated with high levels of change in the organizations.
4. Develop global vision and management skills at both a strategic level and interpersonal level.

UNIT-I

Introduction to Management: Concepts of Management and organization- nature, importance and Functions of Management, Taylor's Scientific Management Theory, Fayol's Principles of Management, Mayo's Hawthorne Experiments, Maslow's Theory of Human Needs, Douglas McGregor's Theory X and Theory Y, Herzberg's Two-Factor Theory of Motivation, System and Contingency approach to management, Planning: Meaning – Significance – Types of Plans – Decision making & Steps in Decision making Process, Leadership Styles, Social responsibilities of Management.

Organizing: Meaning – Features –process of organization – Principles of organization - Elements of organizations – Organization chart – span of control (Graicunas Formulae), Centralisation and Decentralisation, Types of mechanistic and organic structures of organisation (Line organization, Line and staff organization, functional organization, Committee organization, matrix organization, Virtual Organisation,

Cellular Organisation, team structure, boundaryless organization, inverted pyramid structure, lean and flat organization structure) and their merits, demerits and suitability.

UNIT-II

Human Resources Management : Concepts of HRM, Basic functions of HR Manager: Human Resource Planning(definition, objectives and process), Recruitment(definition, sources and techniques), Selection (definition & process), induction and orientation, Training and Development(definition, need and methods),employee exit process, employee relations management, employee compensation and benefits administration, Job Evaluation(objectives, process & methods) and performance appraisals (objectives, process &methods)

UNIT-III

Strategic Management : Mission, Goals, Objectives, Policy, Strategy, Programmes, Elements of Corporate Planning Process, Environmental Scanning, Value Chain Analysis, BCG Matrix, SWOT Analysis, Steps in Strategy Formulation and Implementation, Generic Strategy alternatives, balance score card, Capability Maturity Model (CMM)/People capability maturity model (PCMM).

UNIT-IV

Operations Management: Plant location, Types of Plant Layout-Methods of production (Job, batch and Mass Production), Work Study -Basic procedure involved in Method Study and Work Measurement

Materials Management: Objectives, Need for Inventory control, EOQ, ABC Analysis, Purchase Procedure, value analysis, JIT, six sigma, TQM, supply chain management, Stores Management and Stores Records.

Marketing: Functions of Marketing, Marketing Mix, and Marketing Strategies based on Product Life Cycle, Channels of distribution

UNIT-V

Project Management (PERT/CPM) : Network Analysis, Programme Evaluation and Review Technique (PERT), Critical Path Method (CPM), Identifying critical path, Probability of Completing the project within given time, Project Cost Analysis, Project Crashing. (Simple problems)

TEXT BOOKS:

1. Management Science, Aryasri TMH,2009

(13ITD014)MOBILE APPLICATION DEVELOPMENT using ANDROID

Course Objectives:

1. Mobile Application Development course exposes the students to essentials of mobile apps development.
2. The core modules of this subject include designing, developing, testing, signing, packaging and distributing high quality mobile apps.
3. This course aims to teach mobile app development using Android as the development platform.

Course Outcomes:

Upon completion of this course, student shall be able to:

1. Appreciate the Mobility landscape
2. Familiarize with Mobile apps development aspects
3. Design and develop mobile apps, using Android as development platform, with key focus on user experience design, native data handling and background tasks and notifications.
4. Perform testing, signing, packaging and distribution of mobile apps

UNIT I

Introduction to Mobile

A brief history of Mobile, The Mobile Ecosystem, Why Mobile?, Types of Mobile Applications, Mobile Information Architecture, Mobile Design, Mobile 2.0, Mobile Web development, Small Computing Device Requirements.

J2ME Overview

The World of Java, Inside J2ME, J2ME Architecture, MIDlet Programming, J2ME Wireless Toolkit, Hello World J2ME Style, Multiple MIDlets in a MIDlet Suite

UNIT II

Introduction to Android

History of Mobile Software Development, The Open Handset Alliance, The Android Platform, Android SDK, Eclipse Installation, Android Installation, Building a Sample Android application

UNIT III

Android Application Design Essentials

Anatomy of an Android applications, Android terminologies, Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android Manifest File and its common settings, Using Intent Filter, Permissions, Managing Application resources in a hierarchy, Working with different types of resources

UNIT IV

Android User Interface Design Essentials

User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation

UNIT V

Using Common Android APIs

Using Android Data and Storage APIs, Managing data using SQLite, Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using Android Web APIs, Using Android Telephony APIs, Deploying Android Application to the World

TEXT BOOKS

- J2ME: The Complete Reference, James Keogh, Tata McGrawHill

(13ITD013)NETWORK PROGRAMMING

Course Objectives:

1. Understand the architecture of client-server, and socket programming
2. Recognize the deferent protocols like TCP, UDP, and RPC and their applications
3. An understanding of the design considerations in building of network applications
4. An in depth knowledge of Berkley sockets, and the system calls needed to support network programming

Course Outcomes:

Upon completion of this course, students should be able to:

1. underlay the network hardware, network topologies, and protocols
2. able to design experiment WIN32 and/or UNIX system calls applications, multi-Threading, access controls, signal processing, and inter-process communication.
3. Design considerations in creating network applications.
4. Able to design client server application to support communication interfaces.

UNIT-I

Introduction to Network Programming: OSI model, UNIX standards, TCP and UDP & TCP connection establishment and Format, Buffer sizes and limitation, standard internet services, Protocol usage by common internet application.

UNIT-II

Sockets: Address structures, value – result arguments, Byte ordering and manipulation function and related functions Elementary TCP sockets – Socket, connect, bind, listen, accept, fork and exec function, concurrent servers. Close function and related function.

UNIT-III

TCP client server: Introduction, TCP Echo server functions, Normal startup, Posix Signal Handling, Server with multiple clients – boundary conditions: Crashing and rebooting of server host, shutdown of server host.

UNIT-IV

I/O Multiplexing and socket options: I/O Models, select function, Batch input, shutdown function, poll function, TCP Echo server, getsockopt and setsockopt functions. Socket states, Generic socket option IPV6 socket option ICMPV6 socket option IPV6 socket option and TCP socket options.

UNIT-V

Elementary UDP sockets: Introduction UDP Echo server function, lost datagram, summary of UDP example, Lack of flow control with UDP, determining outgoing interface with UDP.

Elementary name and Address conversions: DNS, gethostbyname function, Resolver option, Function and IPV6 support, and uname function, other networking information.

TEXT BOOKS:

1. UNIX Network Programming, Vol. I, Sockets API, 2nd Edition. – W.Richard Stevens, Pearson Edn. Asia.
2. UNIX Network Programming, 1st Edition,–W.Richard Stevens. PHI.

(13CSE023) SEMANTIC WEB AND SOCIAL NETWORKS

Course Objectives

1. To analyse Web Intelligence and synthesize Knowledge Representation for the Semantic Web
2. To evaluate Ontology engineering and applications pertaining to it.
3. To understand the essence of Semantic Web Applications, Services that promotes Semantic Web Technology
4. To infer the principles of Social Network Analysis and correlate the rules with the semantic web
5. To categorize ontologies, domain modeling, logic, reasoning and inference techniques, semantic web services.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Evaluate principles of ontology and design inference engines in semantic web development
2. Build semantic web applications with social network features
3. Infer the metaphor of social media as "communication as culture."
4. Discuss critically on the use of social tools and identify strategies for their effective implementation
5. Evaluate the social media and synthesize semantic web applications that mitigate societal bad impacts and promote connectivity that enhances sharing.

UNIT I

Thinking and Intelligent Web Applications, The Information Age, The World Wide Web, Limitations of Today's Web, The Next Generation Web

Machine Intelligence, Artificial Intelligence, Ontology, Inference engines, Software Agents, Berners-Lee www, Semantic Road Map, Logic on the semantic Web.

UNIT II

Ontologies and their role in the semantic web, Ontologies Languages for the Semantic Web -Resource Description Framework(RDF) / RDF Schema. Ontology Web Language(OWL),UML/XML/XML Schema.

Ontology Engineering, Constructing Ontology, Ontology Development Tools, Ontology Methods, Ontology Sharing and Merging, Ontology Libraries and Ontology Mapping,

UNIT III

Logic, Rule and Inference Engines.Semantic Web applications and services.Semantic Search.

e-learning, Semantic Bioinformatics, Knowledge Base

UNIT IV

XML Based Web Services, Creating an OWL-S Ontology for Web Services. Semantic Search Technology, Web Search Agents and Semantic Methods,

UNIT V

What is social Networks analysis, development of the social networks analysis, Electronic Sources for Network Analysis - Electronic Discussion networks.

Blogs and Online Communities. Web Based Networks. Building Semantic Web Applications with social network features.

TEXT BOOKS:

1. Thinking on the Web - Berners Lee.Godel and Turing,Wiley interscience,20()8.
2. Social Networks and the Semantic Web, Peter Mika,Springer,2007.

REFERENCE BOOKS:

1. Semantic Web Technologies,Trends and Research in Ontology Based Systems, J.Davies, Rudi Studer. Paul Warren, John Wiley & Sons.
2. Semantic Web and Semantic Web Services -Liyang Lu Chapman and Hall/CRC Publishers,(Taylor & Francis Group)
3. Information Sharing on the semantic Web - Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications.
4. Programming the Semantic Web.T.Segaran, C.Evans, J.Taylor, O'Reilly,SPD.

Elective - I	3	0	3

(13CSE025)BIO-INFORMATICS

Course Objectives:

The course introduces undergraduate students to the emerging interdisciplinary field of Bioinformatics, combining elements of the Computational Sciences with the Biological Sciences. In this course,

1. The student will be able to understand basic concepts of internet & network protocols and how the concepts of computer sciences relate to problems in biological sciences.
2. The students will be able to understand the scope, basic concepts of Bioinformatics, Biological information resources and Retrieval System
3. Emphasis would be laid on understanding Scientific Databases & Algorithms, Sequence Analysis and Dynamic Programming applicable to Modern Biology
4. The students will have sufficient understanding of Biological databases and their types

Course Outcomes:

After completing the course, the students should be able to:

1. Describe the contents and properties of the most important bio-informatical databases, perform text- and sequence-based searches, and analyze and discuss the results in light of molecular biological knowledge
2. Apply the major steps in pair wise and multiple sequence alignment, build the principle for, and execute pair wise sequence alignment by dynamic programming
3. Compose the major features of evolution of genes and proteins and formulate how different methods can be used to construct phylogenetic trees.
4. Assess the major features of methods for modeling protein structures and generate programs for visualizing and analyzing such structures.
5. State examples of methods for describing and analyzing genes, genomes and gene expression and identify and select central concepts used in systems biology

UNIT I

Introduction to Bioinformatics: Scope of Bioinformatics, History of Bioinformatics; Biological information resources and retrieval system Elementary commands and protocols, ftp, telnet, http

UNIT II

Basic Sequencing: DNA mapping and sequencing , Map Alignment , sequencing methods like Shotgun and Sanger method

UNIT III

Sequencing Alignment and Dynamic Programming: BLAST, Heuristic Alignment algorithms , global sequence alignments-Needleman Wunsch algorithm, Smith-Waterman algorithm-Local sequence alignments

UNIT IV

Evolutionary Trees and Phylogeny: Multiple sequence alignment and phylogenetic analysis.

UNIT V

Databases: Introduction to Biological databases, Organization and management of databases, Structure databases- PDB(Protein Data Bank), Molecular modeling databases(MMDB),Primary databases NCBL,EMBL,DDBJ, Secondary Databases-Swissprot, KEGG, Bio Chemical databases- KEGG, BRENDA, WIT, EXPASY

TEXT BOOKS:

1. Bioinformatics Basics, Applications in Biological Science and Medicine by Hooman H. Rashidi and Lukas K.buehler CAC Press 2000
2. Algorithms on strings trees and sequences Dan Gusfield, Cambridge University Press 1997

Elective - I

3 0 3

(13ITD016)COMPUTER FORENSICS

Course Objectives:

1. Gain a working knowledge of Computer Forensics.
2. Explain the responsibilities and liabilities of a computer forensic investigator
3. Explain where digital evidence resides on computer storage devices
4. Learn how to work with Forensic tools.

Course Outcomes:

Upon completion of this course, students should be able to:

1. apply appropriate skills and knowledge in solving computer forensics problems.
2. display their competence in the various forensic computing field.
3. apply their theoretical and practical knowledge in forensic computing, into the future and emerging technology
4. perform competitively as a technical support in any organization

UNIT I

Computer Forensics Fundamentals: What is Computer Forensics?. Use of Computer Forensics in Law Enforcement, Computer Forensics in Law Enforcement, Computer Forensics Assistance to Human Resources/Employment Proceedings, Computer Forensics Services, Benefits of professional Forensics Methodology, Steps taken by computer Forensics Specialists.

Types of Computer Forensics Technology: Types of Military Computer Forensics Technology, Types of Law Enforcement - Computer Forensic Technology - Types of Business Computer Forensics Technology.

Computer Forensics Evidence and Capture: Data Recovery Defined- Data Back-up and Recovery- The Role of Back-up in Data Recovery- The Data Recovery Solution.

UNIT II

Evidence Collection and Data Seizure: Why Collection Evidence? Collection Options – Obstacles – Types of Evidence – The Rules of Evidence- Volatile Evidence- General Procedure – Collection and Archiving – Methods of Collection – Artifacts – Collection Steps – Controlling Contamination: The chain of Custody.

Duplication and preservation of Digital Evidence: Preserving the Digital Crime Scene – Computer Evidence Processing Steps – Legal Aspects of Collecting Preserving Computer Forensics Evidence. Computer Image Verification and Authentication: Special Needs of Evidential Authentication – Practical Consideration – Practical Implementation.

UNIT III

Computer Forensics analysis and validation: Determining what data to collect and analyze, validating forensic data, addressing data – hiding techniques, performing remote acquisitions.

Network Forensics: Network Forensics overview, performing live acquisitions, developing standard procedures for network forensics, using network tools, examining the honeynet project.

UNIT IV

Processing crime and incident scenes: Identifying digital evidence, collecting evidence in private-sector incident scenes, processing law enforcement crime scenes, preparing for a search, securing a computer incident or crime scene, seizing digital evidence at the scene, storing digital evidence, obtaining a digital hash, reviewing a case.

Current computer forensic tools: evaluating computer forensic tool needs, computer forensics software tools, computer forensics hardware tools, validating and testing forensics software.

UNIT V

E-Mail investigations: Exploring the role of E-mail in investigation, exploring the role of the client and server in E-mail, investigating e-mail crimes and violations, understanding e-mail servers, using specialized e-mail forensic tools.

Cell phone and mobile device forensics: Understanding mobile device forensics, understanding acquisition procedures for cell phones and mobile devices.

Working with windows and DOS Systems: Understanding file systems, exploring Microsoft File Structures, Examining NTFS Disks, Understanding whole disk encryption, windows registry, Microsoft startup tasks, MS-DOS Startup tasks, virtual machines.

TEXT BOOKS:

1. Computer forensics, computer crime investigation by John R.Vacca, Firewall Media, New Delhi.
2. Computer forensics and investigations by Nelson, Phillips Enfinger Stuart, CENGAGE Learning.

REFERENCE BOOKS:

1. Real Digital Forensics by Keith J.Jones, Recharad Bejtlich, Curtis W.Rose, Addison-Wesley Pearson Education.

Elective - I

3 0 3

(13CSE026)DESIGN PATTERNS

CourseObjectives:

1. Learn systematic approaches of design patterns that focus and describe abstract systems of interaction between classes, objects, and communication flow.
2. Comprehend the nature of design patterns by understanding a small number of examples from different pattern categories, and to be able to apply these patterns in creating an Object Oriented design.
3. Given Object Orient design heuristics, patterns or published guidance, evaluate a design for applicability, reasonableness, and relation to other design criteria.
4. understanding the knowledge on the documentation and efforts required for designing the patterns.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Know the deeper knowledge of the principles of object-oriented design
2. Understand the design patterns that are common in software applications.
3. Understand how design patterns related to object-oriented design.
4. Document good design pattern structures.
5. Use patterns and have deeper knowledge of patterns.

UNIT –I

Introduction:

What Is a Design Pattern? Design Patterns in Smalltalk MVC, Describing Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern.

UNIT-II

A Case Study: Designing a Document Editor :Design Problems, Document Structure, Formatting, Embellishing the User Interface, Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems, User Operations Spelling Checking and Hyphenation, Summary .

UNIT-III

Creational Patterns: Abstract Factory, Builder, Factory Method, Prototype, Singleton, Discussion of Creational Patterns.

Structural PatternPart-I: Adapter, Bridge, Composite

UNIT-IV

Structural PatternPart-II: Decorator, Façade, Flyweight, Proxy.

Behavioral PatternsPart-I : Chain of Responsibility, Command, Interpreter, Iterator.

UNIT-V

Behavioral Patterns Part-II: Mediator, Memento, Observer, State, Strategy, Template Method ,Visitor, Discussion of Behavioral Patterns. What to Expect from Design Patterns, A Brief History, The Pattern Community An Invitation, A Parting Thought.

TEXT BOOK:

1. Design Patterns By Erich Gamma, Pearson Education

(13ITD021)CLOUD COMPUTING

Course Objectives:

At the end of the course, student will be able to appreciate the cloud computing paradigm, recognize its various forms and able to implement some cloud computing features.

1. At the end of the course, student will be able to appreciate the cloud computing paradigm, recognize its various forms and able to implement some cloud computing features.
2. Get a clear understanding of Cloud Computing Fundamentals and its importance to various organizations.
3. Master the concepts of IaaS, PaaS, SaaS, Public and Private clouds.
4. Understand AWS and learn to develop applications in AWS.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Articulate the main concepts, key technologies, strengths, and limitations of cloud computing and the possible applications for state-of-the-art cloud computing
2. Identify the architecture and infrastructure of cloud computing, including SaaS, PaaS, IaaS, public cloud, private cloud, hybrid cloud, etc.
3. Explain the core issues of cloud computing such as security, privacy, and interoperability.
4. Collaboratively research and write a research paper, and present the research online. Knowledge of Governance of Cloud Computing.

UNIT-I

UNDERSTANDING CLOUD COMPUTING

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Companies in the Cloud Today – Cloud Services

UNIT-II

DEVELOPING CLOUD SERVICES

Web-Based Application – Pros and Cons of Cloud Service Development – Types of Cloud Service Development – Software as a Service – Platform as a Service – Web

Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds

UNIT-III

CLOUD COMPUTING SECURITY ARCHITECTURE

Cloud security fundamentals-Vulnerability assessment tool for cloud- Privacy and Security in cloud

Cloud computing security architecture: Architectural Considerations- General Issues- Trusted Cloud computing- Secure Execution Environments and Communications- Micro-architectures; Identity Management and Access control Identity management- Access control, Autonomic Security

UNIT-IV

CLOUD COMPUTING FOR EVERYONE

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Collaborating Contact Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events – Cloud Computing for the Corporation

UNIT-V

CLOUD COMPUTING CASE STUDIES

Cloud computing case studies: Google App Engine – IBM Clouds –Windows live – Micro soft dynamic CRM- Salesforce.com CRM- App Exchange – Amazon S3 – Oracle OBIEE

TEXT BOOKS:

1. Cloud Computing: Implementation, Management and Security, John W. Rittinghouse, James F.Ransome, CRC Press, rp2012.
2. Cloud computing a practical approach by Anthony T.Velte, Toby J Velte Robert Elsenpeter, and TMH 2010

REFERENCE BOOKS:

(13CSE020)BUILDING ENTERPRISE APPLICATIONS

Course Objectives:

1. Define the Enterprise Architect's roles, responsibilities and deliverables.
2. Identify non-functional requirements (NFRs) and describe common problems and solutions.
3. Translate business requirements into an architecture.
4. How to weigh choices in architecting the client, web, business, integration and data tiers.
5. Apply various evaluation criteria to choosing architectural elements and patterns, tools, servers and frameworks.

Course Outcomes:

Upon completion of this course, student should be able to get Knowledge and Understanding about

1. Student knows different strategies and technologies for developing cross platform, distributed, object-oriented applications in Java
2. Student should discuss issues involved in building robust e-business systems in Java
3. Student knows about the Enterprise Java applications developed using the architecture as a guideline can accommodate rapid change and growth. By taking this course, you'll understand the technical context of the Java EE and relevant technologies.
4. Student knows about various security threats and mechanisms.
5. Student knows about the overall software architecture and design of Java EE technology-based enterprise software systems. Existing architects will explore using Java EE technologies to improve quality of service in enterprise systems..

UNIT-I

Introduction: Challenges of Enterprise Application Development, The Platform for Enterprise Solutions, J2EE Application Scenarios: Multitier Application Scenario, Stand-Alone Client Scenario, Web-Centric Application Scenario, Business-to-Business Scenario, MVC Architecture

J2EE Platform Technologies: Component Technologies, Platform Roles and Services, Service Technologies, Communication technologies.

UNIT –II

Client Tier: Requirements and constraints- Operating Environment, Deployment, Web clients-protocols, Content format, types of web clients, EJB Clients, Enterprise information system clients

Web Tier: Web Applications and Web Containers, Dynamic content creation, Internationalization and Localization, Application Designs, Application Migration

Unit –III

Enterprise Java beans Tier: Business Logic, Enterprise Beans as J2EE Business Objects, Session Beans, and Design Guidelines

Enterprise Information System Tier: Enterprise Information System Capabilities and Limitations. Enterprise Information System Integration Scenarios, Relational Database Management System Access, Application Component Provider Tasks, Application Programming Model.

Unit –IV

Transaction Management : Properties of Transactions, J2EE Platform Transactions, Scenarios, JTA Transactions ,Transactions in Applets and Application Clients ,Transactions in Web Components ,Transactions in Enterprise Information systems

Unit –V

Security : Security Threats and Mechanisms, Authentication-Protection ,Authentication Mechanisms , Authentication Call Patterns , Auto-Registration, Exposing Authentication Boundaries with References , Authorization ,Protecting Messages-Integrity Mechanisms, Confidentiality Mechanisms , Identifying Sensitive Components ,Ensuring Confidentiality of Web Resources

TEXT BOOK:

1. Designing Enterprise Applications with the Java™ 2 Platform, Enterprise Edition , Nicholas Kassem and the Enterprise Team Version

VNR VIGNANA JYOTHI INSTITUTE OF ENGINEERING & TECHNOLOGY

IV Year B.Tech IT-I SEM	L	T/P/D	C
Elective - II	3	0	3

(13ITD020)INFORMATION RETRIEVAL SYSTEMS

Course Objectives:

1. Study fundamentals of DBMS, Data warehouse and Digital libraries
2. Learn various preprocessing techniques and searching and indexing approaches in text mining
3. Know various clustering approaches and study different similarity measures and different cognitive approaches used in text retrieval systems
4. Know about query languages and online IR system

Course Outcomes

By the end of this course the student should be able to:

1. Recognize the Boolean Model, Vector Space Model, and Probabilistic Model.
2. Understand retrieval utilities and different formatting tags
3. Understand cross-language information retrieval
4. Understand the clustering techniques and determine the efficiency.

UNIT-I

Introduction: Definition, Objectives, Functional Overview, Relationship to DBMS, Digital libraries and Data Warehouses. Information Retrieval System Capabilities, Search, Browse, Miscellaneous.

UNIT-II

Cataloging and Indexing: Objectives, Indexing Process, Automatic Indexing, Information Extraction. Data Structures: Introduction, Stemming Algorithms, Inverted file structures, N-gram data structure, PAT data structure, Signature file structure, Hypertext data structure. Automatic Indexing: Classes of automatic indexing, Statistical indexing, Natural language, Concept indexing, Hypertext linkages.

UNIT-III

Document and Term Clustering: Introduction, Thesaurus generation, Item clustering, Hierarchy of clusters. User Search Techniques: Search statements and binding, Similarity measures and ranking, Relevance feedback, Selective dissemination of information search, weighted searches of Boolean systems, Searching the Internet and hypertext.

UNIT-IV

Information Visualization: Introduction, Cognition and perception, Information visualization technologies. Text Search Algorithms: Introduction, Software text search algorithms, Hardware text search systems. Information System Evaluation:

Introduction, Measures used in system evaluation, Measurement example – TREC results.

UNIT-V

Multimedia Information Retrieval, Models and Languages, Data Modeling, Query Languages, Indexing and Searching. Libraries and Bibliographical systems, online IR system, OPACs, Digital Libraries.

TEXT BOOKS:

1. Information Storage and Retrieval systems Theory and Implementation Second Edition
2. Modern Information Retrieval By Ricardo Baeza-Yates, Pearson Education, 2007.

REFERENCE BOOKS:

1. Information Retrieval: Algorithms and Heuristics By David A Grossman and Ophir Frider, 2nd Edition, Springer.
2. Frakes, W.B., Ricardo Baeza-Yates: Information Retrieval Data Structures and Algorithms, Prentice Hall, 1992.
3. Modern Information Retrieval By Yates Pearson Education.
4. Information Storage & Retrieval By Robert Korfhage – John Wiley & Sons

IV Year B.Tech CSE, IT– I SEM	L	T/P/D	C
Elective - II	3	0	3

(13CSE013)CRYPTOGRAPHY AND NETWORK SECURITY

Course Objectives:

1. Understand security concepts, Ethics in Network Security- tradeoffs inherent in security, basic categories of threats to computers and networks and Comprehend security services and mechanisms in the network protocol stack.
2. Describe various cryptosystems- symmetric key cryptography, public key cryptography.
3. Comprehend and apply authentication services and mechanisms, Generate and distribute a PGP key pair and use the PGP package to send an encrypted e-mail message.
4. Describe the enhancements made to IPv4 by IPSec, Understand the concepts of web security.
5. Discuss system security Issues- viruses, measures to counter them, Intrusion detection and Firewall Design Principles.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Acquire knowledge in security issues, services, goals and mechanism of security, Understand mathematical foundation required for various cryptographic Algorithms.
2. Develop a security model to prevent, detect and recover from attacks, Encrypt and decrypt messages. Analyse a given system with respect to security of the system.
3. Sign and verify messages using well-known signature generation and verification algorithms.
4. Should be able to write code for relevant cryptographic algorithms, Should be able to write a secure access client for access to a server
5. Should be able to send and receive secure mails, Should be able to determine firewall requirements, and configure a firewall.

UNIT-I

INTRODUCTION: Security Attacks, Services Mechanisms, A model for Internetwork security, Classical Encryption techniques, Fiestel Cipher Structure, Data Encryption Standard, Block Cipher Design Principles and Modes of Operation, Triple DES, IDEA, BLOWFISH, RC-4, Evaluation criteria for AES, AES Cipher, Placement of Encryption Function, Traffic Confidentiality.

UNIT-II

PUBLIC KEY CRYPTOGRAPHY

Confidentiality using Symmetric Encryption – Principles of Public key Cryptosystems, RSA algorithm, Key Management, Diffie-Hellman key Exchange, Elliptic Curve Cryptography. Buffer overflow, TCP session hijacking, ARP attacks, route table modification, UDP hijacking and man-in-the-middle attacks.

UNIT-III

AUTHENTICATION AND HASH FUNCTIONS

Authentication requirements, Authentication functions, Message Authentication Codes, Hash Functions, Security of Hash Functions and MACs, MD5 message Digest algorithm, Secure Hash Algorithm, RIPEMD, HMAC Digital Signatures, Authentication Protocols, Digital Signature Standard, Authentication Applications: Kerberos – X.509 Authentication Service

UNIT-IV

NETWORK SECURITY: Email Security and Web Security

Electronic Mail Security – PGP/ SMIME, IP security- Architecture, Authentication Header, Encapsulating Security Payload, Key Management, Web Security- Secure Socket Layer, Transport Layer Security and Secure Electronic Transaction

UNIT-V

SYSTEM LEVEL SECURITY

Intrusion detection – password management – Viruses and related Threats – Virus Counter measures – Firewall Design Principles – Trusted Systems.

TEXT BOOKS:

1. William Stallings, "Cryptography And Network Security – Principles and Practices", Prentice Hall of India, Fourth Edition, 2005.
2. Bruce Schneier, "Applied Cryptography", John Wiley & Sons Inc, 2001

IV Year B.Tech CSE, IT– I SEM	L	T/P/D	C
Elective - II	3	0	3

(13ITD019)MOBILE COMPUTING

Course Objectives:

1. Know about Global System for Mobile Communication.
2. Understand different Wireless Medium Access Control Protocols.
3. Differentiate the network and transport protocols used in wired and wireless networks.
4. Define Database Issues and Data Dissemination and Synchronization.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Learn the different wireless communication technologies and understand the protocols used in the layered architecture
2. Explain different Wireless Medium Access Control Protocols.
3. Explain Mobile Network and Transport Layer Protocols
4. Explain database issues and data dissemination and synchronization methods

UNIT-I

Introduction to Mobile Communications and Computing:

Mobile Computing (MC) : Introduction to MC, Novel applications, Limitations, and Architecture.

GSM: Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services.

UNIT-II

(Wireless) Medium Access Control (MAC): Motivation for a Specialized MAC (Hidden and Exposed Terminals, Near and Far Terminals), SDMA, FDMA, TDMA, CDMA, MAC Protocols for GSM.

UNIT-III

Mobile IP Network Layer: Mobile IP (Goals, assumptions, entities and terminology, IP packet delivery, agent advertisement and discovery, registration, tunneling and encapsulation, optimizations), Dynamic Host Configuration Protocol (DHCP).

UNIT-IV

Mobile Transport Layer: Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/fast recovery, Transmission/ time-out freezing, Selective retransmission, Transaction oriented TCP.

UNIT-V

Database Issues: Hoarding techniques, caching invalidation mechanisms.

Data Dissemination: Communications asymmetry, classification of new data delivery mechanisms, pushes based mechanisms, pull-based mechanisms, hybrid mechanisms, selective tuning (indexing) techniques.

TEXT BOOKS:

1. "Handbook of Wireless Networks and Mobile Computing", Stojmenovic and Cacute, Wiley, 2002, I
2. "Mobile Communications", Jochen Schiller, Addison-Wesley, Second Edition, 2004

(13ITD108)WEB TECHNOLOGIES LABORATORY

Course Objectives:

1. Choose best technologies for solving web client/server problems
2. Create conforming web pages ,Use JavaScript for dynamic effects
3. Use Javascript to validate form input entry, Use appropriate client-side or Server-side applications, Create adaptive web pages, Implement cookies
4. Deploy Java Applets and Servlets ,Create an XML application

Course Outcomes:

Upon completion of this course, students should be able to:

1. Identify the entities responsible for implementing mark-up language standards.
2. Code and troubleshoot HTML and XHTML web pages, incorporating CSS and Scripts.
3. Incorporate multimedia (images, animation, sound, and movies) into web pages.
4. Demonstrate effective use of Dreamweaver to build and publish professional websites that employ best practices, adhere to current web standards, and pass Validation.

HARDWARE AND SOFTWARE REQUIRED

1. A working computer system with either Windows or Linux
2. A web browser either IE or firefox
3. Tomcat web server
4. XML editor like Altova Xml-spy [www.Altova.com/XMLSpy – free] , Stylusstudio , etc.,
5. A database either Mysql or Oracle
6. JVM(Java virtual machine) must be installed on your system
7. BDK(Bean development kit) must be also be installed

TASK 1

Design the following static web pages required for an online book store web site.

- 1) HOME PAGE: The static home page must contain three frames.

Top frame : Logo and the college name and links to Home page, Login page, Registration page, Catalogue page and Cart page (the description of these pages will be given below). Left frame : At least four links for navigation, which will display the catalogue of respective links. For e.g.: When you click the link "CSE" the catalogue for CSE Books should be displayed in the Right frame. Right frame: The pages to the links in the left frame must be loaded here. Initially this page contains description of the web site.

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
CSE ECE EEE CIVIL	Description of the Web Site			

Fig 1.1

2) LOGIN PAGE:

This page looks like below:

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart
CSE ECE EEE CIVIL	Login :		<input type="text"/>	
	Password:		<input type="text"/>	
	<input type="button" value="Submit"/>		<input type="button" value="Reset"/>	

3) CATALOGUE PAGE:

The catalogue page should contain the details of all the books available in the web site in a tabular format.

The details should contain the following:

1. Snap shot of Cover Page.
2. Book Title, Author Name, Publisher.
3. Price.
4. Add to cart button.

Logo	Web Site Name				
Home	Login	Registration	Catalogue	Cart	
CSE		Book : XML Bible Author : Winston Publication : Wiely	\$ 40.5		
ECE					
EEE			Book : AI Author : S.Russel Publication : Princeton hall	\$ 63	
CIVIL			Book : Java 2 Author : Watson Publication : BPB publications	\$ 35.5	
		Book : HTML in 24 hours Author : Sam Peter Publication : Sam publication	\$ 50		

TASK 2

4) CART PAGE:

The cart page contains the details about the books which are added to the cart.

The cart page should look like this:

Logo	Web Site Name			
Home	Login	Registration	Catalogue	Cart

IT	Book name	Price	Quantity	Amount
CSE				
ECE				
EEE	Java 2	\$35.5	2	\$70
CIVIL	XML bible	\$40.5	1	\$40.5
Total amount -				\$130.5

5) REGISTRATION PAGE:

Create a “registration form “with the following fields

- 1) Name (Text field)
- 2) Password (password field)
- 3) E-mail id (text field)
- 4) Phone number (text field)
- 5) Sex (radio button)
- 6) Date of birth (3 select boxes)
- 7) Languages known (check boxes – English, Telugu, Hindi, Tamil)
- 8) Address (text area)

TASK 3

VALIDATION:

- a) Write JavaScript to validate the following fields of the above registration page.
 1. Name (Name should contains only alphabets and the length should not be less than 6 characters).
 2. Password (Password should not be less than 6 characters length).
 3. E-mail id (should not contain any invalid and must follow the standard pattern
name@domain.com)
 4. Phone number (Phone number should contain 10 digits only).
- b) Write JavaScript to validate the above login page with the above parameters.

EXPERIMENT 4

Design a web page using CSS (Cascading Style Sheets) which includes the following:

- 1) Use different font, styles:
In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles. For example:

```

<HTML>
<HEAD>
<style type="text/css">
B.headline {color:red; font-size:22px; font-family:arial; text-decoration:underline}
</style>
</HEAD>
<BODY>
<b>This is normal bold</b><br>
<b class="headline">This is headline style bold</b>
</BODY>
</HTML>

```

2) Set a background image for both the page and single elements on the page.

You can define the background image for the page like this:

```
BODY {background-image:url(myimage.gif);}
```

3) Control the repetition of the image with the background-repeat property.
As background-repeat: repeat

Tiles the image until the entire page is filled, just like an ordinary background image in plain HTML.

4) Define styles for links as

```

A:link
A:visited
A:active
A:hover

```

Example:

```

<style type="text/css">
A:link {text-decoration: none}
A:visited {text-decoration: none}
A:active {text-decoration: none}
A:hover {text-decoration: underline; color: red;}
</style>

```

5) Work with layers: For example:

LAYER 1 ON TOP:

```
<div style="position:relative; font-size:50px; z-index:2;">LAYER 1</div>
```

```
<div style="position:relative; top:-50; left:5; color:red; font-size:80px; z-
```

LAYER 2 ON TOP:

```
<div style="position:relative; font-size:50px; z-index:3;">LAYER 1</div>
```

```
<div style="position:relative; top:-50; left:5; color:red; font-size:80px; z-
```

6) Add a customized cursor:

Selector {cursor:value}

For example:

```
<html>
<head>
<style type="text/css">
.xlink {cursor:crosshair}
.hlink{cursor:help}
</style>
</head>
<body>
<b>
<a href="mypage.htm" class="xlink">CROSS LINK</a>
<br>
<a href="mypage.htm" class="hlink">HELP LINK</a>
</b>
</body>
</html>
```

TASK 5

Write an XML file which will display the Book information which includes the following:

- 1) Title of the book
- 2) Author Name
- 3) ISBN number
- 4) Publisher name
- 5) Edition
- 6) Price

Write a Document Type Definition (DTD) to validate the above XML file.

Display the XML file as follows.

The contents should be displayed in a table. The header of the table should be in color GREY. And the Author names column should be displayed in one color and should be capitalized and in bold. Use your own colors for remaining columns.

Use XML schemas XSL and CSS for the above purpose.

Note: Give at least for 4 books. It should be valid syntactically.

Hint: You can use some xml editors like XML-spy

TASK 6

VISUAL BEANS:

Create a simple visual bean with a area filled with a color.

The shape of the area depends on the property shape. If it is set to true then the shape of the area is Square and it is Circle, if it is false.

The color of the area should be changed dynamically for every mouse click. The color should also be changed if we change the color in the "property window ".

TASK 7

Install TOMCAT web server.

While installation assign port number 8000 to TOMCAT. Make sure that these ports are available i.e., no other process is using this port.

Access the above developed static web pages for books web site, using these servers by putting the web pages developed in TASK-1 and TASK-2 in the document root.

Access the pages by using the urls: <http://localhost:8000/vnr/books.html>

TASK 8

User Authentication:

Assume four users user1, user2, user3 and user4 having the passwords pwd1,pwd2,pwd3 and pwd4 respectively. Write a servlet for doing the following.

1. Create a Cookie and add these four user id's and passwords to this Cookie.
2. Read the user id and passwords entered in the Login form (TASK1) and authenticate with the values (user id and passwords) available in the cookies.

If he is a valid user (i.e., user-name and password match) you should welcome him by name(user-name) else you should display " You are not an authenticated user ".Use init-parameters to do this. Store the user-names and passwords in the web.xml and access them in the servlet by using the getInitParameters() method.

TASK 9

Install JSDK. User Authentication: Assume four users user1, user2, user3 and user4 having the passwords pwd1, pwd2, pwd3 and pwd4 respectively. Write a servlet for doing the following.

1. Use init-parameters to do this. access them in the servlet by using the getInitParameters() method.
2. Read the user id and passwords entered in the Login form (TASK1) and authenticate with the values (user id and passwords) with above accessed values. If user is a valid user (i.e., user-name and password match) you should welcome user by name (user-name) else you should display "You are not an authenticated user ".

TASK 10

Install a database (Mysql or Oracle).

Create a table which should contain at least the following fields: name, password, email-id, phone number (these should hold the data from the registration form).

Practice 'JDBC' connectivity.

Write a java program/servlet/JSP to connect to that database and extract data from the tables and display them. TASK with various SQL queries.

Insert the details of the users who register with the web site, whenever a new user clicks the submit button in the registration page (TASK2).

TASK 11

Write a JSP which does the following job: Insert the details of the 3 or 4 users who register with the web site (TASK9) by using registration form. Authenticate the user when he submits the login form using the user name and password from the database (similar to TASK8 instead of cookies).

TASK 12

Create tables in the database which contain the details of items (books in our case like Book name, Price, Quantity, Amount)) of each category. Modify your catalogue page (TASK 2) in such a way that you should connect to the database and extract data from the tables and display them in the catalogue page using JDBC.

(13ITD107)MOBILE APPLICATION DEVELOPMENT LABORATORY

Course Objectives:

Students should implement (and learn to use the tools to accomplish this task) the following during Practical hours:

1. Understand the app idea and design user interface/wireframes of mobile app
2. Set up the mobile app development environment
3. Develop and debug mobile app components – User interface, services, notifications, broadcast receivers, data components
4. Using emulator to deploy and run mobile apps
5. Testing mobile app - unit testing, black box testing and test automation

Course Outcomes:

Upon completion of this lab course, student shall be able to:

1. Understand user interfaces of mobile apps with android
2. Design and develop mobile apps, using Android as development platform
3. Solve real world problems using Android as development platform

HARDWARE / SOFTWARE REQUIREMENTS

- Machine: Pentium P4, 2.8 GHz or higher, 2 GB (or higher) RAM, 40 GB (or higher) HD, Windows XP with SP2 (or higher).
 - S/W on Students Machine : Android ADT bundle, MonkeyTalk, Robotium, Tomcat (or any other J2EE web container)
- 1) Create “Hello World” application. That will display “Hello World” in the middle of the screen in the red color with white background.
 - 2) To understand Activity, Intent
 - a. Create sample application with login module.(Check username and password)
 - b. On successful login, go to next screen. And on failing login, alert user using Toast.
 - c. Also pass username to next screen.
 - 3) Create login application where you will have to validate EmailID(UserName). Till the username and password is not validated, login button should remain disabled.
 - 4) Create and Login application as above. On successful login, open browser with any URL.
 - 5) Create an application that will pass some number to the next screen and on the next screen that number of items should be display in the list.
 - 6) Understand resource folders:
 - a. Create spinner with strings taken from resource folder (res >> value folder).

- b. On changing spinner value, change image.
- 7) Understand Menu option.
 - a. Create an application that will change color of the screen, based on selected options from the menu.
- 8) Create an application that will display toast (Message) on specific interval of time.
- 9) Create an background application that will open activity on specific time.
- 10) Create an application that will have spinner with list of animation names. On selecting animation name , that animation should affect on the images displayed below.
- 11) Understanding of UI :
 - a. Create an UI such that , one screen have list of all the types of cars.
 - b. On selecting of any car name, next screen should show Car details like : name , launched date , company name, images(using gallery) if available, show different colors in which it is available.
- 12) Understanding content providers and permissions:
 - a. Read phonebook contacts using content providers and display in list.
- 13) Read messages from the mobile and display it on the screen.
- 14) Create an application to call specific entered number by user in the EditText
- 15) Create an application that will create database with table of User credential.
- 16) Create an application to read file from asset folder and copy it in memory card.
- 17) Create an application that will play a media file from the memory card.
- 18) Create an application to make Insert , update , Delete and retrieve operation on the database.
- 19) Create an application to read file from the sdcard and display that file content to the screen.
- 20) Create an application to draw line on the screen as user drag his finger.
- 21) Create an application to send message between two emulators.
- 22) Create an application to take picture using native application.
- 23) Create an application to pick up any image from the native application gallery and display it on the screen.
- 24) Create an application to open any URL inside the application and clicking on any link from that URI should not open Native browser but that URL should open the same screen.

L	T/P/D	C
4	0	4

(13CSE024)SOFT COMPUTING

Course Objectives:

1. To introduce with soft computing concepts like neural networks, supervised learning and unsupervised learning techniques.
2. To introduce the concepts of neural network basics and its types.
3. To understand the features of fuzzy sets and its relations.
4. To familiarize the applications of neural networks and fuzzy logic member function features
5. To know the real time applications of internet search techniques and fuzzy controllers.

Course Outcomes:

Upon completion of this course, students should be able to:

1. Identify and describe soft computing techniques and their roles in building intelligent machines.
2. Recognize the feasibility of applying a soft computing methodology for a particular problem.
3. Apply fuzzy logic and reasoning to handle uncertainty and solve problems
4. Apply genetic algorithms and neural networks to classify patterns and regression problems.
5. Evaluate and compare solutions by various soft computing approaches for a given problem.

UNIT-I

Introduction: Neural Networks, Fuzzy Logic, Genetic Algorithms, Hybrid Systems, Soft Computing, Soft Computing Constituents, Soft Computing Characteristics.

Artificial Neural Networks: Introduction, Fundamental Concept, Evolution of Neural Networks, Basic models of ANN, Important Terminologies.

UNIT-II

Supervised Learning Networks: Introduction, Perceptron Networks, Adaptive Linear Neuron, Back propagation Network. **Associative Memory Networks:** Introduction, Training Algorithms for pattern association and Hopfield Networks.

UNIT-III

Unsupervised Learning Networks: Introduction, Fixed Weight Competitive Nets, Kohonen Self-Organizing Feature Maps, Counter Propagation Networks.

Fuzzy Sets: Introduction, Classical Sets, Fuzzy Sets, Classical Relations, Fuzzy Relations

UNIT-IV

Membership functions- Features, Fuzzification, Membership value assignments, Defuzzification Methods, Fuzzy Arithmetic, Fuzzy Measures, Fuzzy Inference Systems, and Fuzzy Logic Control Systems

UNIT-V

Genetic Algorithms- Introduction, Basic operators and terminology, Traditional Algorithm vs Genetic Algorithm, Simple GA, General GA, Classification of GA, Genetic Programming, Applications of GA.

Applications of Soft Computing : Internet Search Technique, Hybrid Fuzzy Controllers.

TEXT BOOKS:

1. Principles of Soft Computing- S N Sivanandam, S N Deepa, Wiley India, 2007
2. Neuro-Fuzzy and Soft Computing A Computational Approach to Learning and Machine Intelligence – J.S.R.Jang, C.T.Sun, E.Mizutani, PHI

REFERENCE BOOKS:

1. Artificial Intelligence and Soft Computing- Behavioral and Cognitive Modeling of the Human Brain- Amit Konar, CRC press, Taylor and Francis Group.
2. Soft Computing and Intelligent System Design -Fakhreddine O Karray, Clarence D Silva,. Pearson Edition, 2004.
3. Artificial Intelligence – Patric Henry Winston – Third Edition, Pearson Education.
4. Fuzzy Sets and Fuzzy Logic Theory and Applications – George J.Klir, Bo Yuan
5. Genetic Algorithms in Search, Optimization and Machine Learning – David E.Goldberg Addison-Wesley
6. An Introduction to Genetic Algorithms – Melanie Mitchell, MIT Press
7. Artificial Neural Networks – B.Yegnanarayana.

Elective - III

3 0 3

(13CSE011)ADVANCED COMPUTER ARCHITECTURE

Course Objectives:

1. know the classes of computers, and new trends and developments in computer architecture
2. Understand pipelining, instruction set architectures, memory addressing.
3. Understand the various techniques to enhance a processors ability to exploit Instruction-level parallelism (ILP), and its challenges.
4. Understand symmetric shared-memory architectures and their performance, several advanced optimizations to achieve cache performance.
5. Understand storage systems, RAID, I/O performance, and reliability measures.

Course Outcomes:

Upon completion of the course, the students are expected to:

1. Describe the principles of computer design.
2. Classify instruction set architectures.
3. Analyze the operation of performance enhancements such as pipelines,caches, shared memory.
4. Describe modern architectures such as RISC, VLIW (very large instruction word) and multi-cpu systems.
5. Compare the performance of different architectures

UNIT -I

Fundamentals of Computer design- Technology trends- cost price and their trends- measuring and reporting performance - quantitative principles of computer design.

UNIT –II

Instruction set principles and examples- Classifying instruction set architecture - memory addressing- type and size of operands- operations in the instruction set- instructions for control flow- encoding an instruction set.

UNIT –III

Instruction level parallelism (ILP)and its dynamic exploitation – Concepts and challenges-overcoming data hazards- reducing branch costs with dynamic hardware prediction – high performance instruction delivery- hardware based speculation

ILP software approach- compiler techniques- static branch protection - VLIW approach - H.W support for more ILP at compile time.

UNIT –IV

Memory hierarchy design- Cache performance- reducing cache misses penalty and miss rate–virtualmemory.

Multiprocessors and thread level parallelism- symmetric shared memory architectures- distributed shared memory- Synchronization- multi threading

UNIT –V

Storage systems - Types – Buses - RAID- errors and failures - designing an I/O system in fiveeasy pieces. Inter connection networks and clusters - interconnection network media – practical issues in interconnecting networks – clusters- designing a cluster

(13ITD007)M-COMMERCE

Course Objectives:

1. To describe e-commerce system concepts
2. To critically analyze examples and cases of e-commerce systems
3. To describe systems and technology in m-commerce
4. To examine some of the applications in m-commerce

Course Outcomes:

Upon completion of the subject, students will be able to:

1. comprehend the underlying economic mechanisms and driving forces of E-Commerce;
2. understand the critical building blocks of E-Commerce and M-Commerce and different types of prevailing business models employed by leading industrial leaders;
3. appraise the opportunities and potential to apply and synthesize a variety of M-Commerce concepts and solutions to create business value for organizations, customers, and business partners;
4. Formulate M-Commerce strategies that lever firm's core competencies, facilitate organizational transformation, and foster innovation; undertake planning, organizing, and implementing of M-Commerce initiatives to effectively respond to of dynamic market environments.

UNIT-I Electronic Commerce

Traditional commerce and E commerce – Internet and WWW – role of WWW – Value chains – strategic business and Industry value chains –role of E Commerce. Packet switched networks – TCP/IP protocol script –Internet utility programmes – SGML, HTML and XML – web client and servers – Web client/server architecture – Intranet and extranets – WebBased Tools for E Commerce – Security.

UNIT-II Mobile Commerce

Introduction – Infrastructure of M- Commerce – Types of Mobilecommerce services – Technologies of wireless business – Benefits and Limitations – Support – Mobile Marketing & Advertisement – Non- Internet Applications in M- Commerce – Wireless/wired commerce comparisons.

UNIT-III Mobile Commerce: Technology

A Framework for the Study of Mobile Commerce – NTT DoCoMo's i-Mode – Wireless Devices for Mobile Commerce – Towards A Classification Framework For Mobile

Location Based Services – Wireless Personal and Local Area Networks – The Impact of Technology Advances on Strategy Formulation in Mobile Communications Networks.

UNIT-IV Mobile Commerce: Theory And Applications

The Ecology of Mobile Commerce – The Wireless Application Protocol – Mobile Business Services – Mobile Portal – Factors influencing the Adoption of Mobile Gaming Services – Mobile Data Technologies and Small Business Adoption and Diffusion – M-Commerce in the Automotive Industry – Location- Based Services: Criteria for Adoption and Solution Deployment – The Role of Mobile Advertising in Building a Brand – M- Commerce Business Models.

UNIT-V Business- To- Business Mobile E- Commerce

Enterprise enablement – Email and messaging – Field force automation– Field sales support – Asset tracking and Maintenance/Management – Remote IT support – Customer retention – Warehouse automation – Security.

TEXT BOOKS:

1. Brian E. Mennecke , Troy J. Strader , “Mobile Commerce: (Soft Cover):Technology, Theory and Applications”, Idea Group Inc., IIR press , 2003.
2. Ravi Kalakota and Andrew B. Whinston “Frontiers of Electronic Commerce”, Pearson Education, 2003.

REFERENCE BOOKS:

(13CSE021)ADVANCED BUSINESS ANALYTICS

Course Objectives:

1. Expose the students to Business Intelligence domain by Introducing insights of Data Mining, Data Warehousing and Integration issues.
2. Predict frequent patterns using association analysis techniques.
3. Discuss supervised and unsupervised learning techniques to obtain useful and hidden data for analysis.
4. Introduce Interactive Visual Data Analysis techniques to visualize.
5. Describe various kinds of data and to know how to utilize time series data.

Course Outcomes:

1. Differentiate between Transaction Processing and Analytical applications and describe the need for Business Intelligence.
2. Exhibit understanding of technology and processing associated with data mining.
3. Demonstrate Data Mining implementation methodology and project life cycle.
4. Design an enterprise dashboard that depicts the key performance indicators which helps in decision making.
5. Show application of concepts using open source tools

UNIT-I Introduction and Algorithms of Data Mining

What is Data Mining? Integration of Data Mining system with a Database or a Data Warehouse System, Major issues in Data Mining, Applications and Trends in Data Mining. Mining Frequent Patterns, Associations: Basic Concepts, Efficient and Scalable Frequent Itemset, Mining methods (Apriori Algorithm, improving efficiency of Apriori, Mining frequent Itemsets without Candidate generation, using vertical data formats, closed frequent itemsets). Mining various kinds of association rules, from association analysis to Correlation analysis, constraint-based association mining

UNIT-II Cluster Analysis, Classification and Prediction

Types of data in cluster analysis, classical Partitioning methods: k-Means and k-Medoids.

What is classification? What is Prediction? Classification by Decision tree Induction, Bayesian classification, Rule based classification, Prediction: Linear Regression, non-linear regression

UNIT-III Introduction to Interactive Visual Data Analysis

- Challenges faced by everyday data analysts
- A brief history of interactive visual data analysis
- Differences between statics graphics and interactive graphics

UNIT-IV Sensing and Analyzing Univariate Data

- Sensing and Analyzing Univariate Data
- Distribution analysis of categorical data
- Distribution analysis of continuous data
- Deviation analysis
- Part-to whole and ranking analysis
- Univariate data analysis best practices

UNIT-V Sensing and Analyzing Time Series Data

- Characteristics of time-series data
- Visual analysis techniques for time-series data
- Interactive graphics aided time-series analysis
- Visual time-series analysis best practices

3 0 3

(13ECE013)DIGITAL IMAGE PROCESSING

Course Objectives

1. To introduce fundamentals of digital image processing and study image transforms
2. To demonstrate digital image processing techniques in spatial and frequency domains
3. To study and compare various image compression algorithms
4. To study advanced image analysis methods: image segmentation, morphological image processing, & image restoration

.Course Outcomes

After going through this course the student will be able to

1. Understand the basic principles of digital image processing and perform image transforms
2. Understand and perform basic image processing methods such as Image filtering operations, Image enhancement
3. Analyze and compare various image compression techniques and their applications
4. Design and implement various algorithms for image analysis

UNIT-I

Fundamentals of Image Processing: Digital Image Fundamentals, Basic steps of Image Processing System, Sampling and Quantization of an image, relationship between pixels, Imaging Geometry.

Image Transforms: 2 D- Discrete Fourier Transform, Discrete Cosine Transform (DCT), Haar Transform, Hadmard Transform, Hotelling Transform and slant transform.

UNIT-II

Image Enhancement: Spatial domain methods: Histogram processing, Fundamentals of Spatial filtering, Smoothing spatial filters, Sharpening spatial filters.

Frequency domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, Selective filtering.

UNIT-III

Image Segmentation: Segmentation concepts, Point, Line and Edge Detection, Edge Linking using Hough Transform, Thresholding, Region Based segmentation.

Wavelet based Image Processing: Introduction to wavelet Transform, Continuous wavelet Transform, Discrete wavelet Transform, Filter banks, Wavelet based image compression

UNIT-IV

Image Compression: Image compression fundamentals - Coding Redundancy, Spatial and Temporal redundancy, Compression models: Lossy and Lossless, Huffman coding, Arithmetic coding, LZW coding, Run length coding, Bit plane coding, Transform coding, Predictive coding, JPEG Standards.

UNIT-V

Image Restoration: Image Restoration Degradation model, Algebraic approach to restoration, Inverse Filtering, Least Mean square filters.

Morphological Image Processing: Dilation and Erosion, Opening and closing, the hit or miss Transformation, Overview of Digital Image Watermarking Methods

TEXT BOOKS:

1. Digital Image Processing- Rafael C. Gonzalez and Richard E.Woods, 3rd Edition, Pearson, 2008.
2. Digital Image Processing- S.Jayaraman, S Esakkirajan, T Veerakumar, TMH, 2010.

(13CSE018)GAMING ENGINEERING

Course Objectives:

1. Mastery of event-based programming and Mastery of resource management as it relates to rendering time, including level-of-detail and culling.
2. Familiarity with the various components in a game or game engine.
3. Familiarity with leading open source game engine components.
4. Familiarity of game physics. And Familiarity with game animation.
5. Exposure to processing real world problems on GPU.

Course Outcomes:

Upon completion of this course student will be able to:

1. Understand all game development problems and issues, such as story creation, character control, scene management, selection of programming language, mathematical analysis, physical analysis, graphics, multimedia, artificial intelligence, and others.
2. Describe the hardware and software components of a gaming system.
3. Design and build a single-user 2D and 3D game.
4. Design and build a multi-user PC or Mobile game
5. Solve complex logic problems using the tools and techniques found in Computer Science, Software Engineering, and Game Programming.

UNIT-I

Introduction to Game Programming

History of Computer Games, Game design principles and architecture, Game design process, Basic Structure of a Game ,Using XNA and working with Xbox 360, Structure of an XNA application , Installing XNA and opening your first XNA project, Working with XNA's Sprite Manager ,Component programming, C# vs. Java .

UNIT-II

2-D Game Design

Rendering 2D images to the screen, Scaling, rotating and positioning 2D images, Keyboard input, Playing sound effects in XNA, Per-pixel texture manipulations, Random terrain slope generation, Alpha blending, Collision detection, And even a complete 2D particle engine for the explosions.

UNIT-III

3-D Game Design

Effect file, First triangle: defining points, displaying them using XNA, World space: defining points in 3D space, defining camera position, Rotation & translation, Indices,

Terrain basics, Terrain from file, reading user input on the keyboard, Adding colors, Lighting basics, Terrain lighting.

UNIT-IV

3-D Game Programming Using HLSL

Graphics Processing Unit (GPU), Running a game on GPU, HLSL introduction, Vertex format, Vertex shader, Pixel shader, Per-pixel colors, Textured triangle, Triangle strip, World transform, World normals, Per-pixel lighting, Shadow map, Render to texture, Projective texturing, Real shadow, Shaping the light, Preshaders.

UNIT-V

Case Studies

1. Creating a Shooters (2-D) game and Creating a Flight Sim(3-D) game.

TEXT BOOK:

1. XNA 3.0 Game Programming Recipes: A Problem-Solution Approach, Riemer Grootjans, A Press, 2009.

REFERENCE BOOKS:

1. Beginning XNA 3.0 Game Programming: From Novice to Professional, Alexandre Santos Lobao, Bruno Pereira Evangelista, Antonio Leal de Farias , Riemer Grootjans, A Press, 2009.
2. Learning XNA 4.0: Game Development for the PC, Xbox 360, and Windows Phone 7, Aaron Reed, O'Reilly, 2011.
3. Microsoft XNA Game Studio Creator's Guide, Second Edition, Stephen Cawood and Pat McGee, Mc. Graw Hill, New York, 2009.

(13ITD017)NETWORK MANAGEMENT SYSTEMS

Course Objectives:

1. Understand the working principle of networks, and protocols
2. Understand the architecture of SNMP version to manage the networks
3. An understanding of the RMON protocol to monitor network remotely
4. We based management of the centralized networks

Course Outcomes:

Upon completion of this course, students should be able to:

1. underlay the network hardware, network topologies.
2. underlay the network protocols
3. Able to implement, manage and configure the network components from the centralized system.
4. Design considerations of the network

UNIT-I

Data communications and Network Management Overview : Analogy of Telephone Network Management, Communications protocols and Standards, Case Histories of Networking and Management, Challenges of Information **Technology Managers, Network Management:** Goals, Organization, and Functions, Network and System Management, Network Management System Platform, Current Status and future of Network Management.

UNIT-II

SNMPV1 Network Management: Organization and Information and Information Models.

Managed network: The History of SNMP Management, The SNMP Model, The Organization Model, System Overview, The Information Model.

SNMPv1 Network Management: Communication and Functional Models. The SNMP Communication Model, Functional model.

UNIT-III

SNMP Management: SNMPv2: Major Changes in SNMPv2, SNMPv2 System Architecture, SNMPv2 Structure of Management Information, the SNMPv2 Management Information Base, SNMPv2 Protocol.

SNMP Management: RMON: What is Remote Monitoring? , RMON SMI and MIB, RMON1, RMON2, ATM Remote Monitoring, A Case Study of Internet Traffic Using RMON

UNIT-IV

Telecommunications Management Network: Why TMN? , Operations Systems, TMN Conceptual Model, TMN Standards, TMN Architecture, TMN Management Service Architecture, An Integrated View of TMN, implementation Issues.

UNIT-V

Web-Based Management: NMS with Web Interface and Web-Based Management, Web Interface to SNMP Management, Embedded Web-Based Management, Desktop management Interface, Web-Based Enterprise Management, **WBEM:** Windows Management Instrumentation, Java management Extensions, Management of a Storage Area Network , Future Directions.

TEXT BOOKS:

1. Network Management, Principles and Practice, Mani Subramanian, Pearson Education.
2. Principles of Network System Administration, Mark Burges, Wiley Dreamtech.

REFERENCE BOOKS:

1. Network management, Morris, Pearson Education.
2. Distributed Network Management, Paul John Wiley.

(13ECE023)EMBEDDED REAL TIME OPERATING SYSTEMS

Course Objectives

1. Learn the general embedded system concepts
2. Understand design of embedded hardware and software development tools
3. Learn the basics of OS and RTOS
4. Describe key issues such as CPU scheduling, memory management, task synchronization, and file system in the context of real-time embedded systems.

Course Outcomes

After completing this course the student will be able to

- Understand and design real time and non real time embedded systems
- Define the unique design challenges of real-time systems and program them.
- Understand unique characteristics of RTOS and use RTOS to build an embedded real-time system
- Gain knowledge and skills necessary to design and develop embedded applications based on real-time operating systems.

UNIT-I

FUNDAMENTALS OF EMBEDDED SYSTEMS

Definition – Classification of Embedded Systems - Processors in the system - Other Hardware units. Software components - Examples for embedded systems, Design issues and trends

UNIT-II

EMBEDDED HARDWARE DEVELOPMENT ENVIRONMENT

Processor Architecture- Structured units of a processor - Processor selection factors. Common memory devices - Memory selection - Memory map - Internal devices & I/O devices, Serial devices - Parallel port devices, Timer and Counting devices - Direct memory access, Communication Interface Standards,.

UNIT-III

EMBEDDED SOFTWARE DEVELOPMENT ENVIRONMENT *

Embedded System Development Process, Embedded Operating systems, Types of Embedded Operating systems, Host and Target machines, Linkers/Locators for embedded software, getting embedded software into the target system, Testing on host machine.

UNIT-IV

REAL TIME OPERATING SYSTEMS CONCEPTS -I

Typical OS structure - RTOS structure - The context of its use - Schedule management for multiple tasks - Scheduling in real time - RTOS task scheduling models – Round Robin, Round Robin with Interrupts, Priority driven- Preemptive and Non-preemptive scheduling

UNIT-V

REAL TIME OPERATING SYSTEMS CONCEPTS -II

Tasks and Task states, Tasks and Data, Semaphores and shared data, Message queues, Mailboxes and Pipes, Timer functions, events, Memory management, Interrupt routines in an RTOS environment.

Case study of RTOS using MUCOS. Case study for RTOS based programming - Coding for Automatic Chocolate vending machine using MUCOS.

TEXT BOOKS:

1. An Embedded Software Primer – David E. Simon, Pearson Ed., 2005.
2. Embedded systems - architecture, programming and design - Raj Kamal; Tata McGraw Hill

REFERENCE BOOKS:

1. Real time Systems", J. W. S. Liu, Pearson
2. The 8051 Microcontroller & Embedded Systems using Assembly and C by Ayala &Gadre,Cengage Publications

(13ECE081)VLSI SYSTEM DESIGN

Course Objectives:

1. To learn the various fabrication steps of IC and come across basic electrical properties of MOSFET.
2. To study the concepts of stick diagrams and layouts with the knowledge of MOS layers through design rules.
3. To study gate level design of subsystems and integrated circuits.
4. To learn basic circuit concepts and scaling of MOS transistors.

Course Outcomes:

After going through this course the student will be able to

1. Understand the various fabrication processes for different FET transistors.
2. Design the basic combinational circuits using stick and layout diagrams.
3. Learn the electrical properties and circuit concepts of MOS transistors.
4. Design the systems using subsystems design process.

UNIT-I

Review of microelectronics and Introduction to MOS technology: Introduction to IC technology: Fabrication process: Oxidation, Diffusion, Lithography, Ion Implantation and Metallisation. Introduction to MOS and related VLSI technology – NMOS-CMOS-BiCMOS Technologies used in VLSI circuits.

UNIT-II

BASIC ELECTRICAL PROPERTIES: Basic Electrical Properties of MOS, CMOS and BiCMOS Circuits:

$I_{Ds} - V_{Ds}$ relationships, MOS transistor threshold Voltage, g_m , g_{ds} , figure of merit w_o , Pass transistor, NMOS inverter, CMOS Inverter

UNIT-III

VLSI Circuit Design Process: VLSI Design Flow, MOS layers, stick diagrams, design rules and layout – Lambda based design rules for wires, transistors and contact cuts, Layout Diagrams for logic gates.

UNIT-IV

Basic Circuit concepts and scaling of MOS transistors:

Sheet resistance, Area capacitance, Delay unit, Inverter Delays, Rise time and fall time estimations, wiring capacitance, Choice of layers, Scaling models, Scaling factors, Limitations of scaling.

UNIT-V

GATE LEVEL DESIGN AND LAYOUT: Architectural issues, Switch logic networks, Gate logic, transmission gate logic, Alternate gate circuit: Pseudo-NMOS, Dynamic CMOS logic.

SUBSYSTEM DESIGN: Subsystem Design, Shifters, Adders, ALUs, Multipliers: Array multiplier, Serial-Parallel multiplier, Parity generator, Comparators, Zero/One Detectors, Up/Down Counter.

TEXT BOOKS:

1. Basic VLSI design by Douglas A, Pucknell, Kamran Eshraghian, Prantice Hall, 1996 3rd edition.
2. CMOS VLSI Design – A circuits and systems perspective, Neil H.E Weste , David Harris, Ayan Banerjee, pearson ,2009.

REFERENCE BOOKS:

1. CMOS logic circuit Design – John P. Uyemura , Springer , 2007
2. Modern VLSI Design –Wayne Wolf, Pearson Education , 3rd Edition, 1997.
3. VLSI Design – A.Albert Raj, Latha PHI, 2008.

(13EIE081)ROBOTICS

Course Objectives:

1. Classification by coordinate system and control system
2. Different types Power Sources And Sensors
3. Classification Of Manipulators, Actuators And Grippers
4. Knowledge on kinematics
5. Applications of different Robots

Course Outcomes:

1. Different types of Power Sources and Sensors, Classification Of Manipulators, Actuators And Grippers
2. Acquire knowledge on different applications of various types of robots.
3. Analyze the direct and the inverse kinematics problems and calculate the manipulator dynamics
4. Trajectory planning of a robot arm.
5. Analyze end-of arm tooling, automation sensors, robot control and robot programming.

UNIT-I

Introduction: Classification of robots, basic robot components, manipulator end effectors, controller, power unit, sensing devices, specification of robot systems, accuracy precision and repeatability.

Robotic sensing devices:

Position, velocity and acceleration sensors, proximity and range sensors, touch and slip sensors, tactile sensors, force and torque sensors.

UNIT-II

Robot Motion Analysis:

Manipulator Kinematics, Inverse Manipulator Kinematics, Manipulator Dynamics- newton-Euler and Lagrange formulation, Trajectory generation.

UNIT-III

Robotic vision system: imaging components, picture coding, object recognition , training and vision systems, review of existing vision systems.

UNIT-IV

Robotics programming:

Methods of robot programming, types of programming, robotics programming languages, artificial intelligence.

UNIT-V

Robot applications: material transfer and machine loading /unloading, processing applications, welding and painting assembly and inspection, future robotic applications and related technologies developments.

TEXTBOOKS:

1. Industrial robotics: Groover, weiss nagel and odrey, Mc Graw
2. Hill.Robotics engineering: klaffer, Chmielwski and nagirn,Prentice hill.
3. Robotics Technology and Flexible Automation / SR Deb

REFERENCE BOOKS:

1. Robotics for engineering: Yorem Korem, Mc Graw Hill.
2. Robotics:control,sensing vision and intelligence: K.S. Fu, R.C.Gonzalez, C.S.g Lee, McGraw HILL
3. Fundamentals of Robotics Analysis and control: Robert J. Schiling

(13CSE027)MULTI CORE TECHNOLOGIES

CourseObjectives:

1. Formulate the parallelism techniques
2. Explain the cache memory hierarchy
3. Discuss the multi core architecture
4. Understand the parallel programming for multi core systems
5. Evaluate techniques for multi core CPU

CourseOutcomes:

At the end of the course student should be able to:

1. Understand the concepts of high performance computer architecture
2. Parallel programming for Shared Memory architecture using OpenMP libraries.
3. Explain different types of synchronization techniques.
4. implement and evaluate techniques for the creation of efficient multi core CPU programs
5. Develop the parallelism techniques

UNIT-I

INTRODUCTION TO MULTIPROCESSORS AND SCALABILITY: Scalable design principles – Principles of processor design – Instruction Level Parallelism, Thread level parallelism. Parallel computer models – Symmetric and distributed shared memory architectures – Performance Issues.

UNIT-II

Brief introduction to cache hierarchy and communication latency, Shared memory multiprocessors, general architectures and the problem of cache coherence.

SYNCHRONIZATION PRIMITIVES: Atomic primitives; locks: TTS, ticket, array; barriers: central and tree; performance implications in shared memory programs.

UNIT-III

MULTI-CORE ARCHITECTURES - Introduction to multi-core architectures -Software and hardware multi threading – SMT and CMP architectures –Design issues – Case studies – Intel Multi-core architecture – SUN CMP architecture., issues involved into writing code for multi-core architectures, development of programs for these architectures, program optimizations techniques.

UNIT- IV

PARALLEL PROGRAMMING: Fundamental concepts – Designing for threads – scheduling - Threading and parallel programming constructs – Synchronization –

Critical sections – Deadlock. Threading, API's, OpenMP – Threading a loop – Thread overheads – Performance issues – Library functions. Solutions to parallel programming problems – Data races, deadlocks and live locks – Non-blocking algorithms – Memory and cache related issues.

UNIT-V

CHIP MULTIPROCESSORS: Why CMP (Moore's law, wire delay); shared L2 vs.tiled CMP; core complexity; power/performance; Snoopy coherence: invalidate vs. update, MSI, MESI, MOESI, MOSI; performance trade-offs; pipelined snoopy bus design; Memory consistency models: SC, PC, TSO, PSO, WO/WC, RC.

TEXT BOOKS:

1. Shameem Akhter and Jason Roberts, "Multi-core Programming", Intel Press, 2006.
2. Michael J Quinn, Parallel programming in C with MPI and OpenMP, Tata Mcgraw Hill, 2003.

REFERENCE BOOKS:
