(19BS1MT01) CALCULUS FOR ENGINEERS

(Common to CE, EEE, ME, ECE, CSE, EIE, IT and AE)

COURSE PRE-REQUISITES: Differentiation, Integration

COURSE OBJECTIVES:

- To learn maximum and minimum value of a given function
- To learn Improper integrals using Beta and Gamma functions
- To learn methods of solving first order differential equations and learn about its applications to basic engineering problems
- To learn methods of solving higher order differential equations and learn about its applications to basic engineering problems
- To learn Laplace transforms of standard functions

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Solve problems involving Maxima and Minima

CO-2: Evaluate integrals using special functions

CO-3: Formulate and solve the problems of first and higher order differential equations

CO-4: Apply knowledge of differential equations to real world problems

CO-5: Use Laplace and Inverse Laplace transform as a tool to solve the problems.

UNIT-I:

Functions of Finite Variables: Limits, Continuity, Partial differentiation, partial derivatives of first and second order, Jacobian, Taylor's theorem of two variables (without proof). Maxima and Minima of two variables, Lagrange's method of undetermined Multipliers.

UNIT-II:

Improper Integrals: Definition of Improper Integrals, Beta functions: Properties and other forms of beta functions (statements only) and problems.

Gamma functions: Properties of Gamma functions (statements only), Relation between the Beta and Gamma functions (without proofs) and Evaluation of improper integrals using Beta and Gamma functions.

UNIT-III:

First Order, First Degree ODE and its Applications: Differential equations of first order and first degree - Exact differential equation, Linear and Bernoulli differential equation, Applications of differential equations of first order and first degree - Newton's law of cooling, Law of natural growth and decay, Orthogonal trajectories.

UNIT-IV:

Second and Higher Order ODE with Constant Coefficients: Second order linear differential equations with constant coefficients: Solution of Homogenous, non

homogeneous differential equations, Non-Homogeneous terms of the type e^{ax} , $\sin(ax)$, $\cos(ax)$, polynomials in x , $e^{ax} V(x)$, $x V(x)$.

UNIT-V:

Ordinary Differential Equations with Variable Coefficients: Method of variation of parameters; Equations reducible to linear ODE with constant Coefficients: Euler-Cauchy equation, Legendre's equation.

UNIT-VI:

Laplace Transforms: Laplace transforms, Existence condition, Laplace transform of Elementary functions, Properties of Laplace transforms (Without Proofs), Laplace transform of special functions (Unit step function, Dirac delta function and Periodic function). Inverse Laplace transform and its properties, Convolution theorem (without proof) and its applications, Solving linear differential equations using Laplace transform.

TEXT BOOKS:

1. Advanced Engineering Mathematics, R. K. Jain and S. R. K. Iyengar, 5th Edition, Narosa Publishing House, 2016.
2. Higher Engineering Mathematics, B. V. Ramana, 33rd Reprint, McGraw Hill Education (India) private Limited, 2018.
3. Engineering Mathematics, N. P. Bali, 4th Edition, Laxmi Publications (P) Ltd., 2001.

REFERENCES:

1. Advanced Engineering Mathematics, Erwin Kreyszig, 9th Edition, John Wiley, 2011.
2. Advanced Engineering Mathematics, Peter 'O' Neil, 8th Edition, Cengage Learning, 2011.

(19BS1CH01) ENGINEERING CHEMISTRY

(Common to CE, EEE, ECE and EIE)

COURSE PRE-REQUISITES: Basic knowledge of Mathematics and Chemistry

COURSE OBJECTIVES:

- To list out the importance of polymers, surfactants and lubricants in real world scenario
- To outline the features of conventional and non-conventional sources of energy
- To discuss the problems of corrosion on structures to interpret the need of alloys
- To emphasize the importance of nanomaterials, analytical techniques, environmental and green chemistry

COURSE OUTCOMES: After the completion of the course, the student will be able to

CO-1: Identify & recognize the role of polymers, surfactants and lubricants in various fields

CO-2: Rationalize ideas about alternate sources of energy so as to reduce load on fossil fuels

CO-3: Summarise the effects of corrosion to indicate the use of alloys in various metallic structures

CO-4: Familiarize with the role of nanomaterials, environmental & green chemistry and assess the use of analytical techniques

UNIT-I:

Polymers: Polymers-Definition, types of polymerization-addition, condensation and copolymerization, Properties of polymers- crystallinity, melting point and glass transition, viscoelasticity, solubility of polymers. Fabrication of polymers (compression, extrusion, blowing and thermoforming). Synthesis, properties and uses of PET, PTFE, PMMA, polycarbonate, Bakelite and urea formaldehyde. Conducting polymers-definition, classification and applications. FRPs and their applications.

UNIT-II:

Surfactants: Definition, cleaning mechanism, types of surfactants, micelles, reverse micelles and critical micelle concentration.

Lubricants: Definition, types, mechanism of lubrication-thick film lubrication, thin film lubrication and extreme pressure lubrication. Additives and selection of lubricants. Properties-viscosity, cloud and pour point, flash and fire point, saponification number-definition and significance.

UNIT-III:

Energy Science:

Fuels: Definition, classification, characteristics of a good fuel. Coal-proximate & ultimate analysis-significance. Petroleum- refining, Cracking-definition, types of cracking, fluid-bed cracking, knocking, octane number, cetane number. Alternative and non-conventional sources of energy – solar, wind, geothermal, nuclear and biomass (advantages and disadvantages).

Battery Technology: Features of batteries, Rechargeable batteries- lithium ion and Zn-air batteries. Fuel cells-methanol-oxygen fuel cell.

UNIT-IV:

Corrosion: Introduction, causes and effects of corrosion, chemical and electrochemical corrosion and mechanism of corrosion. Types-differential aeration corrosion (Pitting and waterline corrosion), differential metal corrosion (Galvanic corrosion). Factors affecting corrosion-nature of metal (position, passivity, purity, areas of anode and cathode) & nature of environment (temperature, pH, humidity). Corrosion control methods-proper designing, cathodic protection, differences between galvanizing and tinning, paints-constituents and functions.

Alloys: Purpose of making alloys, classification of alloys, ferrous alloys ex: Steel, non-ferrous alloys ex: Cu, Al, Pb (features and applications).

UNIT-V:

Nanomaterials and Analytical Techniques: Nanomaterials: Definition, synthesis-top down and bottom up approaches. Properties and application of fullerenes and carbon nanotubes. Applications of nanomaterials in electronics, catalysis, telecommunication and medicine.

Analytical Techniques: Working principle and applications of pH-metry, conductometry, colorimetry, chromatography (TLC), Scanning tunneling microscope and atomic force microscope. Sensors: Lab-on-a-chip- features and applications.

UNIT-VI:

Environmental and Green Chemistry: Air, water and noise pollution: sources and effects, optimum levels of pollution. Solid waste management and e-waste: effects and management.

Green Chemistry- definition, principles and applications of green chemistry. Self healing materials-principle and applications.

TEXT BOOKS:

1. Engineering Chemistry, P. C Jain and M. Jain, 16th Edition, Dhanpat Rai Publications, New Delhi, 2016.
2. Engineering Chemistry, Prasanta Rath, B. Rama Devi, Ch. Venkata Ramana Reddy, Subhendu Chakroborty, 1st Edition, Cengage Publications, Delhi, 2019.
3. A Textbook of Engineering Chemistry, Shashi Chawla, 3rd Edition, Dhanpat Rai Publications, New Delhi, 2010.

REFERENCES:

3	0	3

(19HS1EN01) ENGLISH

(Common to CE, EEE, ECE and EIE)

COURSE OBJECTIVES:

- To enhance their vocabulary through the use of affixes/stem and learn technical vocabulary in specialist fields
- To read and comprehend different kinds of texts (tone, tenor, sound, sense, diction, etc. - sub-skills)
- To write clear, concise, and correct sentences and paragraphs to produce appropriate technical prose
- To recognize and practice use the rhetorical elements necessary for the successful practice of scientific and technical communication

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Use vocabulary contextually and effectively

CO-2: Employ reading skills to comprehend different kinds of texts.(tone, tenor, sound, sense, diction, etc. - sub-skills)

CO-3: Apply principles of critical thinking, problem solving, for clarity, conciseness and accuracy of expression in academic and professional communication

CO-4: Demonstrate improved competence in Standard Written English, including grammar, sentence and paragraph structure, coherence, and use this knowledge to accurately communicate technical information

CO-5: Employ the appropriate rhetorical patterns of discourse in technical and business contexts for scientific and technical communication

UNIT-I:

- | | |
|-----------------|---|
| 1. Reading: | On the Conduct of Life by William Hazlitt |
| 2. Grammar: | Prepositions |
| 3. Vocabulary: | Word Formation (Affixation, Compounding, Conversion, Blending, Borrowing) |
| 4. Writing: | Punctuation, Clauses and Sentences |
| 5. Life Skills: | Values and Ethics; 'If' by Rudyard Kipling |

UNIT-II:

- | | |
|-----------------|--|
| 1. Reading: | The Brook by Alfred Tennyson |
| 2. Grammar: | Articles |
| 3. Vocabulary: | Word Formation- (Prefixes, Suffixes, Root Words) |
| 4. Writing: | Principles of Good Writing-Coherence, Cohesion |
| 5. Life Skills: | Self Improvement; How I Became a Public Speaker by G.B. Shaw |

UNIT-III:

- | | |
|----------------|---|
| 1. Reading: | The Death Trap by Saki |
| 2. Grammar: | Noun-Pronoun Agreement; Subject-Verb Agreement |
| 3. Vocabulary: | Collocation |
| 4. Writing: | Transitional Devices & Paragraph Writing; Writing Process |

5. Life Skills: Time Management; On Saving Time by Seneca

UNIT – IV:

1. Reading: Chindu Yellamma
2. Grammar: Misplaced Modifiers
3. Vocabulary: Synonyms and Antonyms
4. Writing: Writing a Summary
5. Life Skills: Innovation; Muhammad Yunus

UNIT-V:

1. Reading: Politics and the English Language by George Orwell
2. Grammar: Cliches, Redundancies
3. Vocabulary: Common Abbreviations
4. Writing: Cause and Effect Paragraphs
5. Life Skills: Motivation; The Dancer with a White Parasol by Ranjana Dave

UNIT-VI:

Organizational Patterns for writing

1. Patterns of Writing: Comparison and Contrast
2. Patterns of Writing : Classification Paragraph
3. Patterns of Writing: Problem-Solution Pattern of writing

TEXT BOOKS:

1. Language and Life: A Skills Approach, Orient Black Swan, 2018 ed.

RECOMMENDED BOOKS:

1. Technical Communication, Raman, Meenakshi and Sharma, Sangeeta, 3rd Edition, O U P, 2015.
2. Communication Skills, Pushplata and Kumar Sanjay. O U P, 2015.
3. Longman Dictionary of Common Errors, Turton N.D., and Heaton J.B, 1991.
4. Practical English Usage, Swan, Michael. OUP, 1995.
5. Remedial English Grammar, Wood, F.T. Macmillan Publications, 2007.

3	0	3

(19ES1CS01) PROGRAMMING THROUGH C
(Common to CE, EEE, ME, ECE, CSE, EIE, IT and AE)

COURSE PRE-REQUISITES: None

COURSE OBJECTIVES:

- To relate basics of programming language constructs and problem solving techniques
- To classify and implement control structures and derived data types
- To analyze and develop effective modular programming
- To construct mathematical problems and real time applications using C language

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Understand fundamentals of computers and Illustrate the flowchart, algorithm, pseudo code for a given problem, develop programs using various datatypes and operators

CO-2: Develop conditional and iterative statements for a given problem

CO-3: Exercise on programs using arrays, pointers, dynamic memory management, structures and unions

CO-4: Develop solution for a given problem using modular approach and perform file handling

UNIT-I:

Introduction to Programming: Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.). Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flow chart / Pseudo code with examples. From algorithms to programs; source code, variables (with data types) variables and memory locations, syntax and logical errors in compilation, object and executable code .Arithmetic expressions and precedence.

UNIT-II:

Conditional Branching and Loops: Writing and evaluation of conditionals and consequent branching Iteration and loops
Arrays (1-D, 2-D), Character arrays and Strings.

UNIT-III:

Basic Algorithms: Searching (Linear and Binary), basic sorting algorithms (bubble, insertion and selection), Pre-Processor directives.

UNIT-IV:

Functions: (Including using built in libraries), Parameter passing in functions, call by value, passing arrays to functions: idea of call by reference.

Recursion: Recursion, as a different way of solving programs. Example programs, such as finding factorial, GCD, Fibonacci series, Ackerman function.

UNIT-V:

Structures & Unions: Defining structures and array of structures, Unions, Typedef, Bit-fields

Pointers: idea of pointers, defining pointers, use of pointers in self-referential structures, notation of linked list (no implementation), dynamic memory allocation.

UNIT-VI:

File Handling: Basic concepts, text files and binary files, file input/output operations, Error Handling in Files, random access of files, command line arguments.

TEXT BOOKS:

1. The C Programming Language, Brian W. Kernighan and Dennis M. Ritchie, Prentice Hall of India.
2. Schaum's Outline of Programming with C, Byron Gottfried, McGraw-Hill.

REFERENCES:

1. C: The Complete Reference, Herbert Schildt, IV Edition, McGraw-Hill.
2. Let Us C, Yashvant Kanetkar, BPB Publications.
3. Programming in ANSI C, E. Balaguruswamy, Tata McGraw-Hill.

B.Tech. I Semester

L	T/P/D	C
0	2	1

(19BS2CH01) ENGINEERING CHEMISTRY LABORATORY

(Common to CE, EEE, ECE and EIE)

COURSE PRE-REQUISITES: Basic knowledge of Volumetric Analysis and Mathematics

COURSE OBJECTIVES:

- To practically learn the preparation of standard solutions and estimate hardness & chloride content so as to check its suitability for various purposes
- To determine the rate constant of a reaction and check the variation of concentrations with respect to time
- To measure properties like adsorption, absorption of light, conductance, viscosity, pH and surface tension
- To synthesize a polymer and to separate a mixture of organic compounds by Thin Layer Chromatographic (TLC) technique

COURSE OUTCOMES: After the completion of the course, the student will be able to

CO-1: Record the amount of hardness and chloride content in water and interpret the significance of its presence in water

CO-2: Analyze the influence of variation of concentration with time on rate constant

CO-3: Report and predict the significance of properties like absorption of light, adsorption, conductance, viscosity, pH and surface tension

CO-4: Demonstrate the technique of Thin Layer Chromatographic (TLC) and preparation of a polymer

LIST OF EXPERIMENTS:

1. Estimation of hardness of water by complexometric method using EDTA.
2. Determination of chloride content in the given sample water using Argentometric method.
3. Determination of the rate constant of hydrolysis of ester.
4. Estimation of copper present in the given solution by colorimetric method.
5. Conductometric titration of Acid vs Base.
6. Determination of viscosity of sample oil by Redwood Viscometer-I.
7. Determination of pH of various sample solutions by pH meter.
8. Titration of Acid vs Base using pH metric method.
9. Determination of surface tension of a liquid by drop method using Stalagmometer.
10. Determination of R_f value of organic compounds in a mixture by Thin Layer Chromatography.
11. Synthesis of a Polymer-Bakelite/Nylon.
12. Verification of Freundlich/Langmuir isotherm for adsorption of acetic acid on charcoal.

TEXT BOOKS:

1. Laboratory Manual on Engineering Chemistry, S. K. Bhasin and Sudha Rani, Dhanpat Rai Publications.

2. College Practical Chemistry, V. K. Ahluwalia, Sunitha Dhingra, Adargh Gulati, University Press Pvt. Ltd.
3. Practical Chemistry, O. P. Pandey, D. N. Bajpai, and Dr. S. Giri, S. Chand Publications.

REFERENCES:

1. Vogel's Text Book of Quantitative Chemical Analysis, G. N. Jeffery, J. Bassett, J. Mendham and R. C. Denny, Longmann, ELBS.
2. Advanced Practical Physical Chemistry, J. D. Yadav, Goel Publishing House.
3. Practical Physical Chemistry, B. D. Khosla, R. Chand and Sons.

B.Tech. II Semester

L	T/P/D	C
0	2	1

(19HS2EN01) ENGLISH LANGUAGE COMMUNICATION SKILLS LABORATORY

(Common to CE, EEE, ECE and EIE)

COURSE OBJECTIVES:

- To provide ample practice in LSRW skills and train the students in oral presentations, public speaking, role play and situational dialogue
- To provide practice in vocabulary usage, grammatical construction, structural patterns, and improve comprehension abilities in the students
- To train students to use neutral accent through phonetic sounds, symbols, stress and intonation
- To enable students to transfer information from verbal to graphic representation and vice versa
- To equip the learners to learn basic vocabulary of 3000 words (as identified in Oxford or Cambridge dictionary)

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Comprehend spoken and written discourse

CO-2: Speak fluently with neutral accent and exhibit interpersonal skills

CO-3: Write accurately, coherently and lucidly making appropriate use of words depending on context

CO-4: Introduce oneself to people and be able to speak extempore

CO-5: Learnt the basic vocabulary of 3000 words (as identified by oxford/Cambridge advanced learners dictionary)

UNIT-I:

1. Introduction of Self and others
2. Study & Referencing Skills

UNIT-II:

1. Role play-
 - i) Expressing likes and dislikes;
 - ii) Agreeing and disagreeing
 - iii) Making requests (Using modals for polite requests)
 - iv) Accepting and declining requests
2. Listening and note taking, Listening for details
3. Reading Skills – Skimming, Scanning, Intensive Reading and Extensive Reading

UNIT-III:

1. Extempore Speech: JAM
2. Accuracy in listening - Listening to discussion on specific issues
3. Pronunciation, Intonation, Stress and Rhythm

UNIT-IV:

1. Speaking Activity: Oral Presentation
2. Accuracy in listening- listening to discussion on specific issues
3. Reading Comprehension-Contextual Vocabulary

UNIT-V:

1. Speaking Activity: Book/Film Review
2. Reading Comprehension
3. Passive Voice-Constructing the impersonal passive

UNIT-VI:

1. Writing Skills: Information Transfer
2. Definition of a Technical Term
3. Description of a Mechanism/Process

RECOMMENDED BOOKS:

1. Practical English Usage, Swan, Michael. 4th Edition OUP, 2017.
2. Remedial English Grammar, F.T. Wood. BSC Publishers, 2014.
3. Exercises in Spoken English, Parts. I-III. CIEFL, Hyderabad. Oxford University Press, 1997.
4. Fowler's Modern English Usage, R.W. Burchfield OUP, Oxford, 2004.

L	T/P/D	C
0	2	1

(19ES2CS01) PROGRAMMING THROUGH C LABORATORY

(Common to CE, EEE, ME, ECE, CSE, EIE, IT and AE)

COURSE PRE-REQUISITES: None

COURSE OBJECTIVES:

- To gain a working knowledge of C programming to write modular, efficient and readable C programs by Identifying the structural elements and layout of C source code
- To declare and manipulate single and multi-dimensional arrays of the C data types and derived data types like structures, unions
- To use functions from the portable C library and to describe the techniques for creating program modules using functions and recursive functions
- To manipulate character strings in C programs. Utilize pointers to efficiently solve problems

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Use various data types for a specified problem

CO-2: Design, implement, debug a given problem using appropriate language constructs

CO-3: Implement programs using modular approach, file I/O

CO-4: Solve a given problem using C language

[The laboratory should be preceded or followed by a tutorial to explain the approach or algorithm to be implemented for the problem given.]

WEEK1:

Familiarization with programming environment.

WEEK 2:

Simple computational problems using arithmetic expressions.

WEEK 3:

Problems involving if-then-else structures.

WEEK 4:

Iterative problems, sum of series.

WEEK 5:

1D Array manipulation.

WEEK 6:

Matrix problems, string operations.

WEEK 7:

Simple functions.

WEEK 8 AND WEEK 9:

Programming for solving searching and sorting techniques.

WEEK 10:

Recursive functions.

WEEK 11:

Pointers and structures.

WEEK 12:

File operations.

(19ES2ME01) WORKSHOP PRACTICES

(Common to CE, EEE, ECE and EIE)

COURSE PRE-REQUISITES: None

COURSE OBJECTIVES:

- To know the different popular manufacturing process
- To gain a good basic working knowledge required for the production of various engineering products
- To provide hands on experience about use of different engineering materials, tools, equipments and processes those are common in the engineering field
- To identify and use marking out tools, hand tools, measuring equipment and to work to prescribed tolerances

COURSE OUTCOMES: After completion of the course, the student will be able to:

CO-1: Exposed to various types of manufacturing Process

CO-2: Fabricate/make components from wood, MS flat, GI Sheet etc. – hands on experience

CO-3: Exposed to manufacturing of machine components like fasteners, holes & threaded holes etc.

CO-4: Produce small devices / products /appliances by assembling different components

LECTURES & VIDEOS:

1. Manufacturing Methods - Casting, Forming, Machining, Joining, Advanced Manufacturing Methods
2. CNC Machining, Additive Manufacturing
3. Fitting Operations & Power Tools
4. Electrical & Electronics
5. Carpentry
6. Plastic Moulding, Glass Cutting
7. Welding (Arc Welding & Gas Welding), Brazing
8. Power Tools
9. Printed Circuit Boards

I. Carpentry

- i. Cross lap joint
- ii. Mortise & tenon joint

II. Fitting

- i. Square fitting
- ii. L-Fitting

III. Welding

- i. Butt joint by arc welding
- ii. Lap joint by arc welding

IV. Smithy

- i. Making of Rectangular Tray from sheet metal.
- ii. Making of U shaped component by black smithy

V. Electrical & Electronics

- i. Single lamp connection & Stair case connection
- ii. Translation of any tested / designed and tested circuits on a PCB.

VI. Machine Shop

- i. Step turning on lathe
- ii. Drilling & threading

TEXT BOOKS:

1. Workshop Manual, P. Kannaiah and K. L. Narayana, 3rd Edition, Scitech, 2015
2. Elements of Workshop Technology Vol.1 & 2, S. K. Hajra Choudhury, A. K. Hajra Choudhury and Nirjhar Roy, 13th Edition, Media Promoters & Publishers Pvt. Ltd., 2010.
3. Printed Circuit Boards - Design, Fabrication, Assembly and Testing, R. S. Khandpur, Tata McGraw-Hill Education, 2005.

(19ES3CE01) ENGINEERING DRAWING FOR CIVIL ENGINEERS

COURSE OBJECTIVES:

- To learn basic AutoCAD skills
- To learn various curves used in engineering practice, orthographic projections and projection of planes & solids
- To learn Sections and Sectional views of prisms, pyramids, cylinders and cones
- To learn Isometric projections, transformation of Projections & Perspective Projections

COURSE OUTCOMES: After completion of this course, the student will be able to

CO-1: Draw various types of scales, various curves used in engineering practice using AutoCAD

CO-2: Draw orthographic projections and sectional views of planes and solids

CO-3: Draw development of surfaces of solids prisms, pyramids, cylinders and cones

CO-4: Draw isometric projection and transformation of projections & perspective Projections

UNIT-I:

Introduction to Engineering Drawing: Principles of engineering graphics and their significance. – Size of drawing sheets, Types of lines, lettering, Dimensioning, Title block - Drawing instruments and their uses - Different types of scales, scale of chords

Introduction to Auto CAD: User Interface – Menu system – Different types of file formats – setting up a drawing space – coordinate systems – tool bars (draw, modify, annotations, layers etc) – status bar (ortho, grid, snap, iso etc) – display control commands (pan, zoom etc) – printing setup.

UNIT-II:

Curves used in Engineering Practice: Conic Sections – Construction of Ellipse, Parabola, Hyperbola & Rectangular hyperbola – General Method only.

Principles of Orthographic Projections: Introduction – First angle projection – Third angle projection. Projection of Points. Projection of straight lines inclined to both planes by first angle projection method.

UNIT-III:

Projection of Planes: Projections of regular Planes – planes parallel to one and perpendicular to other plane, planes perpendicular to one and inclined to the other, planes inclined to both planes - Auxiliary Projections.

Projection of solids: Projections of Regular Solids - inclined to one and inclined to both the planes - Auxiliary Projections.

UNIT-IV:

Sections of Right Regular Solids: Sections of right regular solids - prisms, pyramids, cylinders and cones. Sections of solids cut by planes parallel to one plane and perpendicular to other plane and Oblique plane.

UNIT-V:

Isometric Projections: Principles of isometric projections, Isometric scale, isometric views, conventions, isometric views of lines, planes, simple solids.

Transformation of Projections: Conversion of isometric views to orthographic views-conventions and vice versa.

Perspective Projections: Perspective view of points, lines, plane figures and simple solids, vanishing point method & visual ray method.

UNIT-VI:

Sign Conventions: Brick, Stone, Sand filling, Mortar, Concrete, Glass, Steel, Aluminium, Earth, Rock and Timber, doors and windows.

Introduction to Line Plan and Sectional Plan of Buildings: Introduction to Building Information Modeling (BIM)

TEXT BOOKS:

1. Engineering Drawing, N. D. Bhatt, 5th Edition, Charotar Publishing House Pvt. Ltd, 2016.
2. Engineering Drawing, Basant Agrawal, 2nd Edition, McGraw Hill Education (India) Pvt. Ltd, 2014.

REFERENCES:

1. Engineering Drawing with AutoCAD, K. Venkata Reddy, 4th Edition, B. S. Publications, 2009.
2. Civil Engineering Drawing-I, N. Sreenivasulu, S. Rama Rao, Revised Edition, Radiant Publishing House, 2017.
3. Engineering Drawing, M. B. Shah, 2nd Edition, Pearson Education India, 2011.
4. Engineering Drawing and Graphics, K. Venugopal, 4th Edition, New Age International, 2007.

(19BS1MT04) LINEAR ALGEBRA AND ADVANCED CALCULUS

(Common to CE, EEE, ME, ECE, CSE, EIE, IT and AE)

COURSE PRE-REQUISITES: Matrices, Differentiation, Integration

COURSE OBJECTIVES:

- To learn rank of the matrix and its application to consistency of system of linear equations
- To learn Eigen Values and Eigen Vectors
- To learn nature of Quadratic forms
- To learn evaluation of multiple integrals and their applications
- To learn basic properties of vector point function and their applications to line, surface and volume integrals

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Compute the rank of a matrix and analyze the solution of a system of linear equations

CO-2: Calculate Eigen values and Eigen vectors

CO-3: Reduce the quadratic form to its canonical form

CO-4: Evaluate areas & volumes using multiple integrals

CO-5: Transform line integral to surface and surface to volume integrals

UNIT-I:

Matrices: Rank of a matrix by Echelon form and Normal form, Inverse of Non-singular matrices by Gauss-Jordan method; System of linear equations; Consistency of Homogeneous and Non-Homogeneous equations, LU Decomposition method.

UNIT-II:

Eigen Values and Eigen Vectors: Eigen values and eigenvectors and their properties, Diagonalization of matrices; Cayley-Hamilton Theorem (without proof), finding inverse and power of a matrix by Cayley-Hamilton Theorem.

UNIT-III:

Real & Complex Matrices, Quadratic forms: Types of Matrices, Symmetric; Hermitian; Skew-Symmetric; Skew-Hermitian; orthogonal matrices; Unitary Matrices and its properties; Quadratic forms and Nature of the Quadratic Forms, Reduction of Quadratic form to canonical form using Linear Transformation and Orthogonal Transformations.

UNIT-IV:

Multiple Integrals: Evaluation of Double Integrals (Cartesian and polar coordinates); change of order of integration (only Cartesian form), Change of variables (Cartesian to polar); Evaluation of Triple Integrals, Change of variables (Cartesian to Spherical and Cylindrical polar coordinates) for triple integrals. Applications: Areas (by double integrals) and volumes (by double integrals and triple integrals).

UNIT-V:

Vector Differential Calculus: Vector point functions and scalar point functions. Gradient and Directional derivatives, Divergence and Solenoidal vectors, Curl and Irrotational vectors, Scalar potential functions, Tangent plane and normal line. Vector Identities (without proofs).

UNIT-VI:

Vector Integral Calculus: Line, Surface and Volume Integrals and their problems. Green's theorem in a plane, Gauss-Divergence theorem and Stokes theorem (without proofs) and their problems.

(19BS1PH01) APPLIED PHYSICS

COURSE PRE-REQUISITES: 10+2 Physics

COURSE OBJECTIVES:

- To apply various phenomena of light- Interference and Diffraction
- To apply the basic principles of lasers for various laser systems and optical fibers
- To interpret basic structures
- To analyze polarization mechanisms in dielectrics
- To discuss the magnetic and superconducting properties of materials

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Extend the importance of Interference in thin films and Fraunhofer diffraction

CO-2: Explain the lasing action of various laser sources and describe propagation of light through optical fiber

CO-3: Identify different types of crystals and importance of X-ray studies in crystals

CO-4: Analyze the frequency dependence of different polarizabilities

CO-5: Illustrate applications of magnetic materials and superconductors

UNIT-I:

Wave Optics: Superposition Principle, Coherence, Interference of light by wave front splitting and amplitude splitting; Interference in thin films by reflection, Newton's rings experiment by reflection- Calculation of wavelength, Fraunhofer diffraction (Qualitative treatment) from a single slit, Double slit diffraction, Diffraction grating and a circular aperture.

UNIT-II:

Lasers: Introduction, Characteristics of Lasers, Spontaneous and Stimulated Emission of Radiation, Meta Stable State, Population Inversion, Lasing Action, Einstein's Coefficients and Relation between Them, Ruby Laser, Helium-Neon Laser, Semiconductor Laser, Application of Lasers in Science, Engineering and Medicine.

UNIT-III:

Optical Fibers: Principle of optical fiber (Total Internal Reflection) – Acceptance angle and acceptance cone – Numerical aperture –Types of fibers and refractive index profiles – Qualitative analysis of attenuation in optical fibers –Application of optical fibers: Optical fiber communication system.

UNIT-IV:

Crystal Structures and XRD: Space lattice, Unit cell, Lattice parameters, Crystal systems, Bravais lattice, Atomic radius, Co-ordination number, Structures and Packing fractions of Simple Cubic, Body Centered Cubic, Face Centered Cubic, Miller Indices for Crystal planes and directions, Inter planar spacing of orthogonal crystal systems, Diffraction of X-rays by crystal planes and Bragg's law, Powder method, Applications of XRD.

UNIT-V:

Dielectric Properties: Electric dipole, Dipole moment, Dielectric constant, Electronic, Ionic polarizations and calculation of their polarizabilities, Orientation Polarization (qualitative), Frequency dependence of Polarization- Internal fields, Claussius – Mossotti equation, Piezo and Ferro electricity.

UNIT-VI:

Magnetic Materials and Superconductors: Permeability, Field intensity, magnetic field induction, Magnetization and Magnetic susceptibility – Origin of magnetic moment, Bohr magneton – Classification of magnetic materials (Dia, Para and Ferro)- Domain theory of ferromagnetism, Hysteresis curve – Soft and Hard magnetic materials – Ferrites and their applications, Superconductivity phenomenon, Meissner effect, Critical fields and Persistent currents, Type I and Type II superconductors, Applications of Superconductors.

TEXT BOOKS:

1. Physics, Resnick, Halliday and Krane, 5th Edition, Wiley, 2014.
2. Engineering Physics, R. K. Gaur and S. L. Gupta, Dhanpar Rai Publications, 2012.
3. Engineering Physics, B. K. Pandey and S. Chaturvedi, Cengage Learning, 2014.

(19ES1CS02) DATA STRUCTURES THROUGH C

(Common to CE, EEE, ME, EIE and AE)

COURSE OBJECTIVES:

- To summarize efficient storage mechanisms of data for an easy access
- To familiarize concepts of various linear data structures
- To introduce concept of non-linear data structures
- To develop applications using data structures

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Find time complexity notations for various sorting techniques

CO-2: Implement the operations of creation, insertion, deletion on linear data structures

CO-3: Apply the operations of creation, insertion, deletion on non-linear data structures

CO-4: Develop the applications using data structure concepts

UNIT-I:

Data Structures: Introduction to data structures, abstract data types. Asymptotic notations, Merge sort, Quick Sort, Radix sort.

UNIT-II:

Linked List: Singly linked list implementation, insertion, deletion and searching operations on linear list, circular linked list implementation
Double linked list implementation, insertion, deletion and searching operations.
Applications of Linked Lists – Polynomial addition and subtraction.

UNIT-III:

Stacks: Operations, array and linked representations of stacks, stack applications- infix to postfix conversion, postfix expression evaluation, Towers of Hanoi recursive implementation.

UNIT-IV:

Queues: operations, array and linked representations of queues. Circular queue operations, dequeue operations.

UNIT-V:

Trees: Definitions, binary tree representation, binary search tree, binary tree traversals- Preorder, Inorder, Post order.

UNIT-VI:

Graphs: Definitions, graph representations, spanning tree, graph traversals- BFS and DFS.

TEXT BOOKS:

1. C Programming & Data Structures, B. A. Forouzan and R. F. Gilberg, Third Edition, Cengage Learning.
2. Data Structures Using C (Paperback), Aaron M. Tenenbaum.

(19ES1CE01) ENGINEERING MECHANICS: STATICS AND DYNAMICS

COURSE PRE-REQUISITES: Mathematics, Physics

COURSE OBJECTIVES:

- To understand, analyze the forces and moment systems for equilibrium
- To know the concept of centroid and area moment of inertia about any axes
- To distinguish between statics and dynamics & kinematics and kinetics
- To understand the work-energy principle and impulse-momentum principle

COURSE OUTCOMES: After the completion of the course, the student will be able to

CO-1: Analyze the systems using equilibrium conditions and apply the concepts of mechanics to engineering applications

CO-2: Determine the centroid of composite areas and moment of inertia of composite areas

CO-3: Solve the kinematics and kinetics problems.

CO-4: Apply work-energy principle, impulse-momentum principle to solve engineering problems

UNIT-I:

Forces: Introduction to Engineering Mechanics – Basic concepts - Classification of a force system - Parallelogram law of forces - Triangle law of forces - Polygon law of forces – Law of transmissibility of forces – Principle of superposition – Lami's theorem - Free Body Diagram – Resultant – Equilibrant - Resultant of coplanar concurrent forces - Equations of Equilibrium of Coplanar Systems - Static indeterminacy

Moments: Moment of a force – Varignon's principle - Parallel forces - Resultant of parallel forces – Couple - Moment of a couple about any point lying in the plane - Resolution of a force into a force-couple and vice-versa - Resultant of coplanar non-concurrent forces – Determinate beams – Cantilever beams – Simply supported beams – Over hanging beams – Subjected to concentrated loads and uniformly distributed loads – Determination of Support reactions.

UNIT-II:

Friction: Types of Friction - Limiting friction - Laws of friction - Equilibrium of bodies on rough horizontal and inclined planes - Equilibrium of connected bodies on rough horizontal and inclined planes – Ladder friction.

UNIT-III:

Centroid & Centre of Gravity: Introduction - Centroid - Centroids of lines, areas and volumes – Centroids of composite areas - Centre of gravity of bodies – Pappu's theorems.

UNIT-IV:

Area Moment of Inertia: Introduction - Inertia - Inertia of areas - Rotation of areas - Radius of gyration - Polar moment of inertia - Parallel axis theorem - Perpendicular

axis theorem - Moments of inertia of standard sections and composite sections - Introduction to Product of inertia.

UNIT-V:

Kinematics of Particles: Kinematics of particles – Rectilinear motion – Curvilinear motion – Projectiles.

Kinetics of Particles: Kinetics of particles – Newton's Second Law – Differential equations of rectilinear and curvilinear motion – Dynamic equilibrium – Inertia force – D. Alembert's Principle applied for rectilinear and curvilinear motion.

UNIT-VI:

Work - Energy Principle: Equation of translation, principle of conservation of energy, work - energy principle applied to particle motion and connected systems, fixed axis rotation.

Impulse – Momentum Principle: Introduction, linear impulse momentum, principle of conservation of linear momentum, elastic impact and types of impact, loss of kinetic energy, coefficient of restitution.

TEXT BOOKS:

(19ES1ME02) ELEMENTS OF MECHANICAL ENGINEERING

COURSE OBJECTIVES:

- To apply the basic concepts of Thermodynamics, Thermodynamic laws, concept of power cycles and IC engines
- To apply the principles of Steam Power plant, Boiler, Steam Turbines and Gas turbine
- To know the principles of operation of different types of hydraulic machinery and Refrigeration & Air conditioning systems
- Understand about Foundry, Welding, Mechanical working, Press working operations
- Remember the principle of working of lath machine, shaper, drilling, milling, grinding and NC & CNC machine tools

COURSE OUTCOMES: After the completion of the course, the student will be able to

CO-1: Acquire the knowledge of Thermodynamics, Thermodynamic laws, concept of power cycles, IC engines Steam Power plant, Boiler, Steam Turbines and Gas turbine

CO-2: Understand the knowledge on Principles of operation of different types of Hydraulic machinery and Refrigeration & Air conditioning systems

CO-3: Know the importance of Foundry, Welding, Mechanical working, Press working operations

CO-4: Identify various cutting tools and decide the sequence of operations for lathe machine, shaper, drilling, milling, grinding and NC & CNC machine tools operations

UNIT-I:

Thermodynamics: Basic concepts of Thermodynamics, Property of gases, Zeroth Law, First Law of Thermodynamics and its applications, Second Law of Thermodynamics, Carnot cycle, Air standard cycles – Otto, Diesel Cycles.

Internal Combustion Engines: Internal combustion engines, definition, classification, components, working of two- stroke, four stroke cycle engines, SI and CI Engines.

UNIT-II:

Steam Power Plant, Boiler, Steam Turbines: Layout of steam power plant, Water tube and Fire tube Boilers:- "Cochron", Babcock and Wilcox Boiler and High Pressure Boilers. (Benson & La-mount only).

Steam Turbines: Classification, Impulse & Reaction Turbines

Gas Turbine-Power Plants: Classification of gas turbines, Closed & Open cycle types

UNIT- III:

Hydraulic Pumps & Turbines: Centrifugal Pumps, Pelton wheel, Francis turbine and Kaplan Turbine -- Layout of Hydro electric power plant

Refrigeration & Air Conditioning Systems: Description of Vapour Compression and Vapour Absorption systems, Classification of air conditioning systems, working principles.

UNIT-IV:

Foundry Practice: Patterns, Moulding and Moulding materials, casting methods-Sand Casting, Shell mould Casting, Investment Casting, Die Casting ,Centrifugal casting – Principle and Application of these processes

Welding: Types of Welding- Electric Arc welding - Coated electrode, TIG welding & MIG welding, Gas welding and cutting, Resistance welding- Spot welding, Soldering and Brazing.

UNIT-V:

Mechanical Working: Hot and Cold working, Rolling, Types of Rolling mills, Forging-operations, forging methods, Extrusion-methods, Metal Spinning and Wire Drawing Press Working Operations: Cutting, Bending, Drawing and Squeezing

UNIT-VI:

Machine Tools: Construction of lathe, shaper, drilling, milling, grinding and NC & CNC machine tools-Advantages, Machine controls.

TEXT BOOKS:

1. Elements of Mechanical Engineering, M. L. Mathur, 13th Edition, Jain Brothers, 2016.
2. Elements of Mechanical Engineering, R. K. Rajput, 7th Edition, Laxmi Publications, 2014.

REFERENCES:

1. Elements of Mechanical Engineering, P. N. Gupta, Standard Publishers Distributors, 2011.
2. Elements of Mechanical Engineering, S. Trymbaka Murthy, I. K. International Publishing House, Pvt. Ltd., 2011.

(19BS2PH01) APPLIED PHYSICS LABORATORY

COURSE OBJECTIVES:

- To practically learn interaction of light with matter through physical phenomena like interference, diffraction and dispersion
- To understand the periodic motion and formation of standing waves and know the characteristics of the capacitors and resistors
- To experience the mechanical oscillations and resonance phenomena
- To verify Biot –Savart law
- To compare the experimental results with the class room learning

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Demonstrate the optical phenomena with formation of Newton Rings, pure spectrum through prism and to evaluate grating parameters

CO-2: Illustrate periodic motion by measuring rigidity modulus of a material and also discharging of a capacitor

CO-3: Differentiate resonance phenomenon in Melde's experiment and Sonometer experiment

CO-4: Realize tangent law of magnetism

CO-5: Correlate the experimental results with the class room learning

LIST OF EXPERIMENTS:

1. **Spectrometer:** To determine the dispersive power of given prism using spectrometer
2. **Diffraction Grating:** To determine the wavelength of given laser and grating parameters
3. **Diffraction at Single Slit:** To determine the width of given wire.
4. **Newton's Rings Experiment:** To determine the radius of curvature of given plano convex lens
5. **Optical fiber:** Numerical aperture and acceptance angle of an optical fiber.
6. **Torsional pendulum:** To determine the rigidity modulus of a given wire
7. **Melde's experiment:** To determine the frequency of electrical vibrator using resonance phenomenon
8. **AC frequency by Sonometer:** To measure frequency of A.C mains
9. **RC Circuit:** To determine the time constant of RC circuit
10. **Stewart Gee's experiment:** To verify Biot - Savart's law
11. **Solar Cell:** To study the V-I characteristics of Solar cell
12. **Light Emitting Diode:** To study the V-I characteristics of LED

(19ES2CS02) DATA STRUCTURES THROUGH C LABORATORY

(Common to CE, EEE, ME, EIE, and AE)

COURSE OBJECTIVES:

- To impart the implementation of data structures such as linked lists, stacks and queue
- To introduce the various advanced data structures such as tree traversals
- To analyze the sorting algorithms
- To teach the various graph traversal algorithms

COURSE OUTCOMES: After completion of the course, the student will be able to

CO-1: Analyze the algorithms to determine the time and space complexities

CO-2: Implement the linear data structures like stacks, queues and linked lists

CO-3: Evaluate the non-linear data structures like Trees and graphs

CO-4: Predict the tree and graph traversing techniques

WEEK 1:

1. Merge Sort

WEEK 2:

2. Quick Sort

3. Radix Sort

WEEK 3:

4. SLL creation, insertion, deletion, searching, display operations.

WEEK 4:

5. CLL creation, insertion, deletion, searching, display operations.

WEEK 5:

6. DLL creation, insertion, deletion, searching, display operations.

WEEK 6:

7. STACK operations using arrays and Linked List.

WEEK 7:

8. Infix to postfix conversion.

WEEK 8:

9. Postfix evaluation.

10. Towers of Hanoi problem

WEEK 9:

11. QUEUE operations using arrays and LL.

WEEK 10:

12. CIRCULAR QUEUE operations using arrays.

WEEK 11:

13. DEQUEUE operations using arrays.

WEEK 12:

14. Binary tree traversals using recursion.

WEEK 13:

15. Graph traversals (BFS and DFS).

(19PW4CE01) DESIGN SENSITISATION

COURSE PRE-REQUISITES: None

COURSE OBJECTIVES:

- To create awareness of design among students of engineering
- To teach a systematic approach to identifying and defining a problem before brainstorming for a solution
- To instill a sense of significance towards applying creativity to product and service design
- To motivate students to apply design thinking while implementing a project focusing on local or global societal problems

COURSE OUTCOMES: After completion of this course, the student will be able to

CO-1: Identify design principles from an engineering perspective

CO-2: Cultivate sensitivity towards design aspects of Activities, Environments, Interactions, Objects, and Users (A-E-I-O-U) in daily life

CO-3: Validate problem statements through user empathisation with societal and environmental consciousness

CO-4: Devise visual design and documentation to communicate more effectively

CO-5: Develop project management skills in a multidisciplinary environment

STUDENTS' RESPONSIBILITIES:

1. Forming diverse teams of 3–5 members each to work collaboratively throughout the semester.
2. Proactively engaging to observe the objects and interactions in their daily life and society from a design perspective.
3. Identifying general societal and social problems that may be effectively addressed using design thinking principles
4. Presenting and reporting the tasks to the concerned faculty members using their creative communication and people skills.

MODULE-1: Design Overview and Motivation

Design is Everywhere – Various perspectives including history; Design Vocabulary; Design in Indian Context; Art and Design; Importance of Design in Career

MODULE-2: Understanding Design

Design Engineering vs. Engineering Design; Good and Bad Design — Case Studies
Introduction to the Design Double Diamond: Discover-Define-Develop-Deliver;
Importance of user-centricity for design

MODULE-3: Doing Design: Discover Phase

Looking for problems: SDGs; Identifying Stakeholders and Defining User Personas; User Empathisation and Tools; Data collection from users and for users: Surveys, Questionnaires, Statistics, Interactions

Need Analysis: Types of Users, Types of Needs; Market Size; Value Proposition to the Users; Identifying Addressable Needs and Touchpoints; Data Validation; Structuring Need Statements

MODULE-4: Designing Customer Service Experience

Enhancing Customer Experience in Services through Innovation and Design Thinking; Service Development Process and Case Studies; Service Experience Cycle and Case Studies

MODULE-5: Communication Skills for Design

Communicating using various media to express an idea in print, electronic, mobile, web, and social media: Visuals, Text, Voice and Audio, Infographics

General Guidelines for a Good Presentation: Target Audience, Slideshow Templates, Appropriate Visual Elements and Aesthetics, Typography, Presentation Styles, Guidelines

General Guidelines for a Good Report: Documentation Classification, Standards, Styles, and Templates

MODULE-6: Sustainable Design Approaches

Concern for Environment and Sustainability in Design, Case Studies to understand good Design For Environment (DFE) Decisions; Design Considerations in the five stages of the Product Life Cycle
