

## WEEK-END PROJECTS LAB

### Student Design and Experimental Learning Center

Students have many ideas (Of which some ideas requires only a week to realize) on which they want to work, but lack of infrastructure, including the space, limits realization of their ideas. In this connection, the Institute established '**WEEK-END PROJECTS Lab - Student Design & Experimental Learning Center**', where the students can work/research on their idea to realize that. It will equip them with the ability to think, concretize the idea, design research study, work on it and report the findings. This Lab also provides the opportunity to the students to ask questions in different areas of knowledge.

AICTE has provided financial assistance of 13.14 Lakhs to the institution for establishing this laboratory under the scheme of "Project Center for Technical Education". This center is established to provide assistance to students to buy the raw material for their real-time projects.

Week-End Projects Lab
